Source of data: BNP Paribas Asset Management, as at 31.03.2025.

The above mentioned securities are for illustrative purpose only and do not constitute any investment recommendation.

The data as shown in the factsheets are based on official accounting data and are based on trade date.

ESG (ENVIRONMENTAL, SOCIAL AND GOVERNANCE) Score goes from 0 (worst) to 99 (best)

BNPP AM's internal ESG scoring methodology determines an issuer's ESG score by evaluating performance vs. scoring peers on a narrow set of key ESG issues related to the environment (e.g. climate change), social issues (e.g. human resources management) and governance (e.g. independence and competence of directors).

BNPP AM uses numerous research inputs and data sources (e.g. Sustainalytics, ICS & Trucost) to determine issuers' ESG scores. If the issuer's commitments and practices on a pillar of assessment (E, S or G) are better than scoring peers, it will receive a positive 'contribution' for this pillar.

Each issuer is assigned a final score from 0 to 99 which is the result of 50 as a reference plus the sum of the contributions from each of the three pillars.

SUSTAINABLE INDICATORS

ESG Score

	Neutral Score	 Environmental Contribution (E)	 Social Contribution (S)	 Governance Contribution (G)	ESG global score	Coverage rate
Portfolio	50	4.25	3.24	3.93	61.42	100%
Benchmark	50	1.97	0.79	0.86	53.62	100%

Score goes from 0 (worst) to 99 (best)

Carbon footprint (tCO2eq/M€ Enterprise Value)

This section provides the aggregated calculation of the carbon footprint of all investment in the portfolio.
This indicator assesses the carbon footprint expressed in tCO2eq / million € of enterprise value.
Source: BNPP AM, Trucost

For every €1 million invested into the fund, the gap in carbon footprint between the portfolio & its benchmark is equivalent to:

The average annual CO2 emissions of 1 homes linked to electricity use

The average annual CO2 emissions of 1 cars

Source: IEV Life Cycle Assessment Calculator Data Tools from International Energy Agency, as of June 2024, Emissions for a medium size vehicle
Source: Greenhouse Gas Equivalencies Calculator from US Environmental Protection Agency, based on 2023 Annual Energy Outlook, US Home electricity use

Label(s)

The fund has received recognition from the Belgian Central Labeling Agency in the form of Towards Sustainability Label. The Towards Sustainability label helps all types of retail and institutional investors looking for more sustainable savings and investment solutions. Which in its turn encourages financial institutions to offer a diverse and high-quality range of sustainable products. For more information on the label, visit the website: www.towardssustainability.be

The fund has been awarded the French Label ISR. The main ambition of the Socially Responsible Investment (SRI) label supported by the public authorities is to distinguish between investment funds invested in issuers whose strategy and management practices meet the challenges of sustainable development. For more information on the label, visit the website: <https://www.lelabelisr.fr/>

SUSTAINABLE INDICATORS

ESG Contribution

The ESG contributions are determined by BNP Paribas Asset Management's ESG analysts on the basis of detailed criteria to systematically evaluate companies' commitments and practices in the areas of environmental, social and governance. Each of the above contributions at the portfolio level, is the weighted average of the contributions of the individual portfolio holdings. Environmental Contribution (E) takes into account, among other things, climate change, environmental risk management, and the use of natural resources. Social Contribution (S) takes into account, among other things, human capital management, the quality of social dialogue, and the respect of diversity. Governance Contribution (G) takes into account, among other things, the transparency on executive compensation, the fight against corruption, and gender equality.

Carbon footprint

This fund possesses a more detailed impact report. Please refer to the dedicated fundpage on BNP Paribas Asset Management's website for additional information.

Portfolio Coverage

The coverage represents, within a portfolio or benchmark or ESG benchmark, the percentage of securities that have an ESG score or carbon footprint within those that are eligible to have an ESG score or carbon footprint using BNPP AM's internal methodology. Non-eligible securities include, but are not limited to cash, external funds.

For more information on ESG indicators, please refer to BNPP AM's webpage : <https://www.bnpparibas-am.com/en/esg-scoring-framework/> & <https://www.bnpparibas-am.com/en/measuring-carbon-footprints/>

For more detailed information on our sustainability documents, please refer to BNPP AM's webpage : <https://www.bnpparibas-am.com/en/sustainability-documents/>

The summary risk indicator is a guide to the level of risk of this Product compared to other Products. It shows how likely it is that the Product will lose money

We have classified this Product as 4 out of 7, which is a medium risk class.

The risk category is justified by the investment mainly in stocks and shares, the value of which can fluctuate considerably. These fluctuations are often amplified in the short term.

Be aware of currency risk. If the currency of your account is different from the currency of this Product, the payments you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Other risks materially relevant to the Product not included in the summary risk indicator:

- **Liquidity risk:** this risk arises from the difficulty of selling a security at its fair value and within a reasonable period of time due to a lack of buyers.
- **Operational risk:** in the event of an operational breakdown within the management company, one of its representatives or the depositary, investors could face various disruptions (late payment, delivery etc.).
- **Mainland China investment risk:** these investments are subject to additional risks specific to the Chinese market.

For additional details regarding the risks, please refer to the prospectus.

This Product does not include any protection from future market performance so you could lose some or all of your investment.

GLOSSARY

Alpha

Alpha is an indicator used to measure the value added by an active portfolio manager relative to a passive exposure to a benchmark. A positive alpha expresses an outperformance whereas a negative alpha indicates an underperformance. A simple way to calculate alpha is to subtract a portfolio's expected return (based on the benchmark's performance adjusted with the beta of the portfolio, see Beta definition for further details). For instance, an alpha of 0.50 means that the portfolio outperformed the market-based return (benchmark's performance adjusted from the Beta exposure of the portfolio) by 0.50%.

Beta

Beta is a measure of portfolio market risk, the market being represented by financial indices (such as MSCI World) that are consistent with the portfolio's guidelines. It measures the sensitivity of portfolio performance to the performance of the market. For example a beta of 1.5 means the portfolio will move by 1.5% for a market performance of 1%. Mathematically, it is the correlation between the portfolio and the market multiplied by their ratio of volatilities.

Equity Risk

Equity risk is "the financial risk associated with owning shares in a particular investment." Equity risk often refers to equity in companies through the purchase of shares, and generally does not refer to the risk of real estate payments or the build-up of assets in properties.

Information Ratio

The information ratio is a risk-adjusted return that measures the relationship between the portfolio's tracking error and its relative return compared with the benchmark index (called active return).

R²

The Correlation Coefficient indicates the strength and direction of a linear relationship between fund performance and benchmark. The coefficient is an element of [-1,1], where 1 equals a perfectly correlated increasing linear relationship, -1 equals a perfectly correlated decreasing linear relationship, and 0 means that there is no linear correlation.

Sharpe ratio

A measure for calculating risk-adjusted return. It indicates the return earned in excess of the risk-free rate per unit of risk. It is calculated by dividing the difference between the return and the risk-free rate by the standard deviation of the return on the investment. The Sharpe ratio indicates whether the excess return was obtained thanks to good investment management or by taking additional risk. The higher the ratio, the better the risk-adjusted return.

Tracking Error

The tracking error measures the volatility of a portfolio's relative return in relation to its benchmark index.

Volatility

An asset's volatility is the standard deviation of its return. As a measure of dispersion, it evaluates the uncertainty of asset prices, which is often equated to their risk. Volatility can be calculated ex post (retrospectively) or estimated ex ante (anticipatively).
