

THEAM QUANT - MULTI ASSET DIVERSIFIED DEFENSIVE FUND

theam QUANT FUNDS

LIQUID ALTERNATIVES

MARKETING COMMUNICATION | FOR PROFESSIONAL CLIENTS ONLY | MAY 2025

OBJECTIVE

- The objective of the Fund is to increase the value of its assets over the medium term, by being exposed to a diversified portfolio, the components of which are chosen using a systematic selection method based on different asset classes (equities, credit, commodities and government bonds). The exposure to the portfolio will be adapted in order to keep the Fund annual volatility at a target level of 5%.

KEY POINTS

- Diversified investment universe covering several asset classes to multiply investment opportunities
Dynamic allocation using a trend following approach, entirely reviewed each day, to ensure reactivity to changing market conditions
A flexible fund suitable for defensive clients looking for return while limiting downside risk
An investor friendly framework: UCITS, eligible for the PEA and with daily liquidity

STRATEGY

I. A global multi asset flexible fund

- Covers different equity markets
Includes alternative asset classes (Credit and Commodities)
Also includes defensive assets (Government Bonds)

II. A dynamic and quantitative asset allocation

- This allocation method intends to capture the best trends in assets, while ensuring a long-term volatility targeted at 5%
Daily management of allocation and volatility levels in order to ensure high reactivity and robustness
Short positions can be taken within the sub-asset classes, while the asset class itself will be always net long

III. Stringent risk control

- The fund adjusts its exposure to the portfolio daily (from 0% to 200%) with the objective of maintaining volatility at 5% or below
The portfolio must be overall long with possible leverage: the sum of all asset weights must be between 0% and 200%
Tactical protection allowed at the sub-asset class level in case of market correction (limited short position)

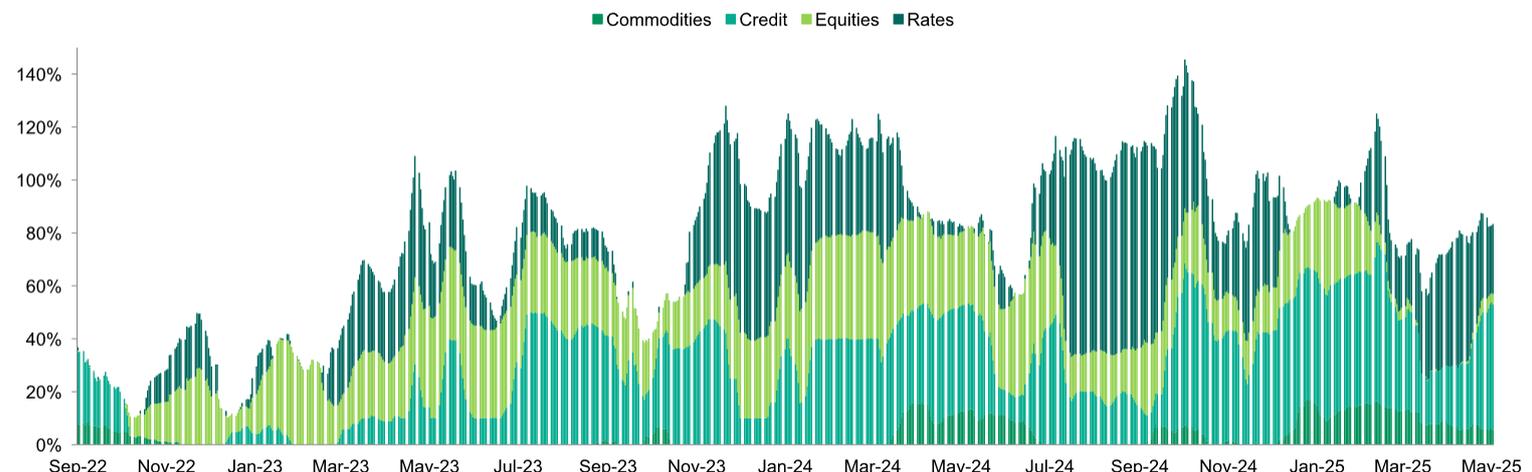

Investment universe

Table with 4 columns: Asset classes (always net long positions), Sub-Asset classes, Min, Max. Rows include Bonds (Gov. Bonds Germany, US, Japan, IG Europe, HY Europe, US, HY US), Equities (Equity Europe, US, Japan, China, Emerging Markets), and Commodities.

The value of investments and the income they generate may go down as well as up and it is possible that investors will not recover their initial outlay, the fund described being in risk of capital loss. Following the new Sustainable Finance Disclosure Regulation (SFDR) that came into force on the 10th of March 2021, financial entities such as BNP Paribas Asset Management who sell products into the EU are required to classify the products they manufacture or advise into three categories: products with sustainable investment objective (Article 9); products promoting environmental or social characteristics (Article 8); products neither Article 8 or Article 9 (Article 6). *The summary risk indicator is determined on a scale from 1 to 7 (7 being the highest risk level). It is subject to a periodical computation and can consequently change over time. We invite you to consult regularly the KID.

Funds' main common risks

- The following list of risk factors associated with the funds is not exhaustive. The risk factors that should be considered in connection with any investment include (but are not limited to) the following:
- An investment in the funds may involve a significant degree of risk. Investment in the funds is only suitable for those persons who are able to bear the economic risk of the investment, understand the degree or risk involved, believe that the investment is suitable based upon their investment objectives and financial needs, and have specific needs for liquidity of investment. There can be no assurance that the funds' objectives will be achieved or that there will be any return of capital.

Economic conditions

- The success of any investment activity is affected by general economic conditions, which may affect the level and volatility of interest rates and the extent and timing of investor participation in the equity markets. Unexpected volatility or illiquidity in the markets in which the funds hold positions could impair the funds' ability to carry out their business or cause them to incur losses. None of these conditions is within the control of the funds or its management company and/or investment manager and no assurances can be given that the funds or its management company and/or investment manager will anticipate these developments.

The funds will possess inherent risks

- These include, among other things, credit, liquidity, volatility, currency and interest rate risk, the financial condition of the underlying obligors, general economic conditions, market price volatility, the condition of certain financial markets, political events and developments or trends in any particular industry.

Currency exchange risk

- The value of an investment may be affected by fluctuations in the currency of the country in which the investment was made, or exchange control regulations.

Interest rate risk

- The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc.

Derivatives risk

- The use of derivatives by the funds includes various risks. Those risks are (without limitation), the lack of secondary market liquidity under circumstances, valuations risks, the lack of standardization and regulation, the risk of leverage, the risk of counterparty.

Liquidity risk

- There is a risk that investments made in funds may become illiquid due to an over-restricted market (often reflected by a very broad bid-ask spread or by substantial price movements), or if their "rating" declines or their economic situation deteriorates.

Credit risk

- This is the risk that may derive from the rating downgrade of a bond issuer to which the funds are exposed, which may therefore cause the value of the investments to go down. Funds investing in high-yield bonds present a higher than average risk due to the greater fluctuation of their currency or the quality of the issuer.

Risk linked to equity markets

- The risks associated with investments in equities (and similar instruments) include significant fluctuations in prices, negative information about the issuer or market and the subordination of a company's equities to its bonds. The value of investments and the income they generate may go down as well as up and it is possible that investors will not recover their initial outlay.

Counterparty risk

- This risk relates to the quality of the counterparty with whom the funds do business or enter into various transactions. This risk reflects the counterparty's ability to honor its commitments (payment, delivery, repayment, etc.)

Disclaimer

THEAM Quant™ is the generic name given to a broad range of systematic strategies designed by BNP Paribas Global Markets and mostly implemented in Funds managed by BNP Paribas Asset Management
