Period: 3 years. Frequency: monthly	

The summary risk indicator is a guide to the level of risk of this Product compared to other Products. It shows how likely it is that the Product will lose money. We have classified this Product as 4 out of 7, which is a medium risk class.

Be aware of currency risk. If the currency of your account is different from the currency of this Product, the payments you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above. Because the Product currency is different from the reference currency of the Fund, you will be exposed to the fluctuations between those currencies.

Other risks materially relevant to the Product not included in the summary risk indicator:

- **Counterparty Risk:** this risk is associated with the ability of a counterparty in an Over The Counter financial transaction to fulfil its commitments like payment, delivery and reimbursement.
- **Operational and Custody Risk:** in the event of an operational breakdown within the management company, one of its representatives or the depositary, investors could face various disruptions (late payment, delivery etc.).

For additional details regarding the risks, please refer to the prospectus.

This Product does not include any protection from future market performance so you could lose some or all of your investment.

INDEX DESCRIPTION:

The BNP Paribas Energy & Metals Enhanced Roll (TR) index is published in USD by Standards and Poor's. This Index represents a diversified investment in a basket of commodities futures indices with the objective to optimise the roll mechanism. Each commodity is represented by its own reference index. The allocation between the commodities futures indices is derived from the composition of the Bloomberg Commodity Ex-Agriculture and Livestock Capped Total Return Index (Bloomberg code: BBUXALCT Index). The Index is rebalanced every month following any rebalancing of the Bloomberg Commodity Ex-Agriculture and Livestock Capped Total Return Index. The rebalancing of the Index does not involve any cost for the Index.

GLOSSARY

Equity Risk

Equity risk is "the financial risk associated with owning shares in a particular investment." Equity risk often refers to equity in companies through the purchase of shares, and generally does not refer to the risk of real estate payments or the build-up of assets in properties.

Tracking Error

The tracking error measures the volatility of a portfolio's relative return in relation to its benchmark index.

Volatility

An asset's volatility is the standard deviation of its return. As a measure of dispersion, it evaluates the uncertainty of asset prices, which is often equated to their risk. Volatility can be calculated ex post (retrospectively) or estimated ex ante (anticipatively).
