INVESTMENT RISKS

- Interest rate risk: The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc.
- Credit risk: This is the risk that may derive from the rating downgrade of a bond issuer to which the sub funds are exposed, which may therefore cause the value of the investments to go down. Sub funds investing in high-yield bonds present a higher than average risk due to the greater fluctuation of their currency or the quality of the issuer.
- Counterparty risk: This risk relates to the quality of the counterparty with whom the management company does business, in particular for the settlement/delivery of financial instruments or the conclusion of financial forward contracts. The risk reflects the counterparty's ability to honour its commitments (payment, delivery, repayment, etc.).
- Liquidity risk: There is a risk that investments made in the sub funds may become illiquid due to an over-restricted market (often reflected by a very broad bid-ask spread or by substantial price movements), or if their "rating" declines or their economic situation deteriorates.
- Derivatives risk: the use of derivatives by the funds includes various risks. Those risks are (without limitation), the lack of secondary market liquidity under circumstances, valuations risks, the lack of standardization and regulation, the risk of leverage, the risk of counterparty.
- Risk linked to equity markets: the risks associated with investments in equities (and similar instruments) include significant fluctuations in prices, negative information about the issuer or market and the subordination of a company's equities to its bonds. The value of investments and the income they generate may go down as well as up and it is possible that investors will not recover their initial outlay.
- Environmental, Social and Governance (ESG) Investment Risk: The lack of common or harmonized definitions and labels integrating ESG and sustainability criteria at EU level may result in different approaches by managers when setting ESG objectives. This also means that it may be difficult to compare strategies integrating ESG and sustainability criteria to the extent that the selection and weightings applied to select investments may be based on metrics that may share the same name but have different underlying meanings. In evaluating a security based on the ESG and sustainability criteria, the Investment Manager may also use data sources provided by external ESG research providers. Given the evolving nature of ESG, these data sources may for the time being be incomplete, inaccurate or unavailable. Applying responsible business conduct standards in the investment process may lead to the exclusion of securities of certain issuers. Consequently, the Sub-Fund's performance may at times be better or worse than the performance of relatable funds that do not apply such standards.
