RISK

Risk Indicator

Risk Analysis

Risk Analysis	Fund
Volatility	25.13
Ex-post Tracking Error	0.18
Period: 3 years. Frequency: monthly	

The summary risk indicator is a guide to the level of risk of this Product compared to other Products. It shows how likely it is that the Product will lose money

We have classified this Product as 5 out of 7, which is a medium-high risk class.

The risk category is justified by the investment mainly in stocks and shares, the value of which can fluctuate considerably. These fluctuations are often amplified in the short term.

Be aware of currency risk. If the currency of your account is different from the currency of this Product, the payments you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Other risks materially relevant to the Product not included in the summary risk indicator:

- Operational and Custody Risk:** in the event of an operational breakdown within the management company, one of its representatives or the depositary, investors could face various disruptions (late payment, delivery etc.).

For additional details regarding the risks, please refer to the prospectus.

This Product does not include any protection from future market performance so you could lose some or all of your investment.

INDEX DESCRIPTION:

The benchmark is the FTSE EPRA Nareit Developed Europe index published in EUR by FTSE International Limited. The composition of the index is reviewed on a quarterly basis, each Thursday following the third Friday of March, June, September and December. The index is valued daily. The majority of the index's underlying components are property sector equities listed on European stock exchanges. It is a Net Total Return index.

GLOSSARY

Equity Risk

Equity risk is "the financial risk associated with owning shares in a particular investment." Equity risk often refers to equity in companies through the purchase of shares, and generally does not refer to the risk of real estate payments or the build-up of assets in properties.

Sharpe ratio

A measure for calculating risk-adjusted return. It indicates the return earned in excess of the risk-free rate per unit of risk. It is calculated by dividing the difference between the return and the risk-free rate by the standard deviation of the return on the investment. The Sharpe ratio indicates whether the excess return was obtained thanks to good investment management or by taking additional risk. The higher the ratio, the better the risk-adjusted return.

Tracking Error

The tracking error measures the volatility of a portfolio's relative return in relation to its benchmark index.

Volatility

An asset's volatility is the standard deviation of its return. As a measure of dispersion, it evaluates the uncertainty of asset prices, which is often equated to their risk. Volatility can be calculated ex post (retrospectively) or estimated ex ante (anticipatively).
