

THEAM QUANT – FIXED INCOME DIVERSIFIER (FIND)

theam QUANT FUNDS

LIQUID ALTERNATIVES

MARKETING COMMUNICATION | FOR PROFESSIONAL CLIENTS ONLY | SEPTEMBER 2024

OBJECTIVE

The THEAM Quant – Fixed Income Diversifier (FIND) fund implements a systematic strategy aiming to generate uncorrelated performance over the medium term, by being exposed to a global dynamic long/short portfolio of short-term money market rates and long term government bonds

KEY POINTS

THEAM Quant – Fixed Income Diversifier gives access to different sources of returns in the interest rates curve with risk control mechanisms, in a fully systematic fashion:

- Trends in short-term interest rates
Interest rates differences across countries observed with a diversified set of factors while aiming at neutralising the duration exposure in the medium term
Leverages on the most recent research on factor investing in fixed-income. The BNP Paribas Quantitative Investment Strategies Lab team (QIS lab) has released a new research paper called 'Beyond carry and momentum in government bonds'

ESG Integration - the strategy's geographical allocation is contingent to each eligible country's:

- Democracy score (provided by Vigeo Eiris): Sovereign bonds with a score below 60/100 are excluded. 10 EU Technical Expert Group disclosure factors are taken into account
Signature of the Paris Agreement: Countries that do not adhere to the Paris Agreement will see their maximum long exposure reduced

STRATEGY

1 SHORT-TERM INTEREST RATES TIME SERIES TREND:

Seeking to take advantage of trends in stir while controlling for volatility budget

- Proprietary trend signal developed by BNP Paribas
High reactivity to market movements
Stringent risk control

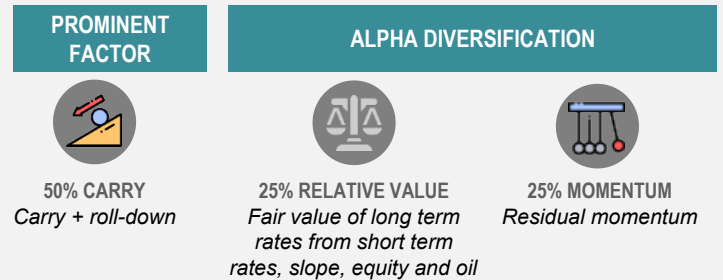

75% maximum weight (<5% daily turnover)

40% volatility contribution

2 LONG-TERM RATES LONG/SHORT MULTI-FACTOR: GLOBAL GOVERNMENT BONDS MULTI-FACTOR

Designed to capture interest rates differences across countries with three long-short factor strategies

One common portfolio optimisation: Long / short market-neutral portfolios of 10y bond futures

- US, Canada, UK, Germany, Japan

150% maximum weight (<5% daily turnover)

60% volatility contribution

GEOGRAPHICAL DIVERSIFICATION

VOLATILITY BUDGET AND VOLATILITY CONTROL

It applies a volatility control mechanism both at the sub-strategy and at the portfolio level with 4.5% volatility target. Each sub-strategy's exposure to the underlying instruments may be leveraged to reach the volatility target, with look-through exposures to 10-years futures up to 150% (long or short) and to short-term interest rates up to slightly more than x10 (long or short)

Source: BNP Paribas. The value of investments and the income they generate may go down as well as up and it is possible that investors will not recover their initial outlay, the fund described being in risk of capital loss. Following the new Sustainable Finance Disclosure Regulation (SFDR) that came into force on the 10th of March 2021, financial entities such as BNP Paribas Asset Management who sell products into the EU are required to classify the products they manufacture or advise into three categories: products with sustainable investment objective (Article 9); products promoting environmental or social characteristics (Article 8); products neither Article 8 or Article 9 (Article 6). *The summary risk indicator is determined on a scale from 1 to 7 (7 being the highest risk level). It is subject to a periodical computation and can consequently change over time. Characteristics are subject to change at any time without notice and should not be construed as investment recommendations. Prospectus and KID guidelines are leading. For a Complete description and definition of risks, please consult the last available prospectus and KID of the funds. Investors considering subscribing to a fund should read carefully its most recent prospectus and KID that can be downloaded free of charge from our website <https://www.bnpparibas-am.com>

Funds' main common risks

- The following list of risk factors associated with the funds is not exhaustive. The risk factors that should be considered in connection with any investment include (but are not limited to) the following:
- An investment in the funds may involve a significant degree of risk. Investment in the funds is only suitable for those persons who are able to bear the economic risk of the investment, understand the degree or risk involved, believe that the investment is suitable based upon their investment objectives and financial needs, and have specific needs for liquidity of investment. There can be no assurance that the funds' objectives will be achieved or that there will be any return of capital.

Economic conditions

- The success of any investment activity is affected by general economic conditions, which may affect the level and volatility of interest rates and the extent and timing of investor participation in the equity markets. Unexpected volatility or illiquidity in the markets in which the funds hold positions could impair the funds' ability to carry out their business or cause them to incur losses. None of these conditions is within the control of the funds or its management company and/or investment manager and no assurances can be given that the funds or its management company and/or investment manager will anticipate these developments.

The funds will possess inherent risks

- These include, among other things, credit, liquidity, volatility, currency and interest rate risk, the financial condition of the underlying obligors, general economic conditions, market price volatility, the condition of certain financial markets, political events and developments or trends in any particular industry.

Currency exchange risk

- The value of an investment may be affected by fluctuations in the currency of the country in which the investment was made, or exchange control regulations.

Interest rate risk

- The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc.

Derivatives risk

- The use of derivatives by the funds includes various risks. Those risks are (without limitation), the lack of secondary market liquidity under circumstances, valuations risks, the lack of standardization and regulation, the risk of leverage, the risk of counterparty.

Liquidity risk

- There is a risk that investments made in funds may become illiquid due to an over-restricted market (often reflected by a very broad bid-ask spread or by substantial price movements), or if their "rating" declines or their economic situation deteriorates.

Credit risk

- This is the risk that may derive from the rating downgrade of a bond issuer to which the funds are exposed, which may therefore cause the value of the investments to go down. Funds investing in high-yield bonds present a higher than average risk due to the greater fluctuation of their currency or the quality of the issuer.

Risk linked to equity markets

- The risks associated with investments in equities (and similar instruments) include significant fluctuations in prices, negative information about the issuer or market and the subordination of a company's equities to its bonds. The value of investments and the income they generate may go down as well as up and it is possible that investors will not recover their initial outlay.

Counterparty risk

- This risk relates to the quality of the counterparty with whom the funds do business or enter into various transactions. This risk reflects the counterparty's ability to honor its commitments (payment, delivery, repayment, etc.)

Disclaimer

THEAM Quant” is the generic name given to a broad range of systematic strategies designed by BNP Paribas Global Markets and mostly implemented in Funds managed by BNP Paribas Asset Management.
