Management Company	BNP Paribas Asset Management Europe
Capital protection	No capital guarantee
Morningstar Category	EAA Fund Alt - Systematic Futures

Fund management comment

February was positive for equities as investors were mainly focused on growth rather than on remaining inflation. Yet, central banks confirmed they want to proceed cautiously before starting any rate cut, impacting negatively bonds. The strategy strongly benefited from its global long position on equities, especially through Japan exposure. On the other hand, it was partially impacted by its net long position on bonds through Europe. FX had a positive impact thanks to the global long exposure on USD that benefited from rate increase. Finally, the commodity part was impacted negatively by mean reverting industrial metals. The allocation has been increased on equities while only slightly decreased on bonds but with a transfer from Bund to JGB. USD long exposure has been increased too. Commodity is now long energy, short industrial metals.

Investment Objective

The THEAM Quant - Multi Asset Diversified Fund aims to offer absolute performance decorrelated from traditional asset classes, while respecting a volatility limit of 10%.

Investment strategy

- The investment universe is composed of four asset classes (equities, fixed income, commodities and real estate), selected with the objective to maximize portfolio diversification.
- The allocation within the strategy is determined by using an optimization model, that aims to maximize the portfolio's expected return while controlling its volatility.
- The optimized quantitative allocation model is carried out every day on the investment universe.
- A risk-control mechanism is implemented and dynamically allocates between the portfolio and monetary instruments, to ensure volatility remains below 10%.

RISK INDICATOR

potentially lower rewards			potentially higher rewards			
1	2	3	4	5	6	7

The summary risk indicator is a guide to the level of risk of this Product compared to other Products. It shows how likely it is that the Product will lose money because of movements in the markets or because we are not able to pay you. We have classified this Product as 3 out of 7, which is a medium-low risk class.

Be aware of currency risk. If the currency of your account is different from the currency of this Product, the payments you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Risks

Risk of capital loss: Investments realised in funds are subject to market fluctuations and to inherent risks to investments in stocks. The value generated by these investments can be profits or losses and it is possible that investors do not recover the totality of their invested capital. The funds described in this documents display a risk of capital loss.

Equity risk: The fund is synthetically exposed to European equity markets. Unitholders are therefore exposed to declines in these equity markets.

Model risk: The model used to determine the asset allocation for each Strategy Index portfolio is based on a quantitative approach. There is a risk that the model will not be efficient as there is no guarantee that the indicators defined will be relevant in the future.

Counterparty Risk: This risk is associated with the ability of a counterparty in a financial transaction to fulfill its commitments like payment, delivery and reimbursement.

Risk related to the use of forward financial instruments: In order to achieve its investment objective, the Sub-Fund makes use of forward financial instruments traded over-the-counter that allow it to replicate the performance of the strategy. These instruments may involve a series of risks that could lead to adjustments or even the early termination of the instrument, which may affect the Sub-Fund's NAV.

Glossary

Morningstar category Alt - Systematic Futures: The Alt-Systematic Futures category includes funds which take a technical approach to investing in the futures markets. Most of these funds use momentum-based strategies relying little on manager discretion.

Net Asset Value - Represents the net assets of the fund (ex-dividend) divided by the total number of shares issued by the fund.

Historical tracking error - Measure of the actual deviation of the fund's returns from the comparative benchmark index returns (annualised). A higher number means that the fund is taking greater risk against the benchmark.

Historical Volatility of Portfolio - Illustrates the dispersion of the fund's realized monthly returns around the average monthly return, indicating how volatile the fund's return is over time. The higher the number the more volatile the fund's returns.

UCITS - "UCITS" or "undertakings for the collective investment in transferable securities" are investment funds regulated at European Union level. They account for around 75% of all collective investments by small investors in Europe. The legislative instrument covering these funds is Directive 2014/91/EU.

Ongoing Charges - The ongoing charges figure is based on the fund's expenses during the previous year. It excludes transaction costs and performance fees incurred by the fund.

Disclaimer

BNP PARIBAS ASSET MANAGEMENT France, "the investment management company," is a simplified joint stock company with its registered office at 1 boulevard Haussmann 75009 Paris, France, RCS Paris 319 378 832, registered with the "Autorité des marchés financiers" under number GP 96002.

This material is issued and has been prepared by the investment management company. It contains opinions and statistical data that are considered lawful and correct on the day of their publication according to the economic and financial environment at the time. This document does not constitute investment advice or form part of an offer or invitation to subscribe for or to purchase any financial instruments nor shall it or any part of it form the basis of any contract or commitment whatsoever.

This document is provided without knowledge of an investors' situation.
