Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS FUNDS EURO DEFENSIVE EQUITY Legal Entity Identifier : 213800MS31RUMNP2JF71

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	No No	
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50.00% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing

environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

a list of

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- $4.\ A$ company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters,

respect for human

anti-corruption and anti-bribery matters.

rights,

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark MSCI EMU (EUR) NR is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the

The Fund seeks to increase the value of its assets over the medium term by investing in shares denominated or traded in euros issued by companies from the Eurozone.

The portfolio is built based on a systematic approach, combining several equity factor criterions such as value, profitability, low-volatility and momentum without trying to get a market sensitivity close to 1.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents -Sustainability documents **BNPP** AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

weighted average ESG score of its investment universe, as defined in the Prospectus

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes,

notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 9%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 11%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	X No	
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35.00% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing

environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

a list of

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- $4.\ A$ company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters,

respect for human

anti-corruption and anti-bribery matters.

rights,

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The Fund seeks to increase the value of its assets over the medium term by investing in EUR denominated shares issued by companies that have their registered offices in one of the member states of the Eurozone, with a solid financial structure and/or potential for earnings growth.

After hedging, the Fund's exposure to currencies other than EUR will not exceed 5%.

Although the majority of the Fund equity securities may be components of the index MSCI EMU (NR) (the «benchmark»), the Investment Manager uses its wide discretion in relation to the benchmark to invest in companies and sectors not included in the benchmark in order to take advantage of specific investment opportunities. Industry analysis is first undertaken to assess the structural characteristics of the industry in which each company operates. The stock selection is then achieved by placing substantial importance on the generation of detailed, proprietary research at company level. The Investment Manager seeks to exploit the market's increasing short-term focus by investing in companies when their attractive, longer-term investment attributes are masked by shorter term trends, fashion or random noise.

The end result is a high conviction portfolio with investments made in approx. 40 companies characterized by the quality of their financial structure and/or potential for earnings growth. Internal investment guidelines have been defined, including in reference to the benchmark, and are regularly monitored to ensure the investment strategy remains actively managed, while staying within pre-defined risk levels.

Nevertheless, due to similar geographical constraint, investors should be aware that the Fund's risk and return profile may, from time to time, be comparable to the risk and return profile of the benchmark.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
 - The financial product shall invest at least 35% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 35%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social

characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 10%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

• How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP PARIBAS FUNDS EURO FLEXIBLE BOND Legal Entity Identifier: 213800LWHYS6D2GXRF47

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	No No	
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15.00% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing

environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

a list of

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

This Fund is actively managed. The composite benchmark 20% Bloomberg Euro Aggregate 1-3 years + 80% €STR is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the composite benchmark.

The Fund seeks to achieve a return that is higher than Euro Money Market over a recommended investment horizon of around 36 months by using an actively managed flexible bond strategy while maintaining a high level of liquidity.

It is managed based on a flexible approach combining active and fundamental approaches on duration management, yield curve position, country allocation, issuer selection as well as on OECD Currencies. This process is combined with internal sustainability extra financial research capabilities as well as macro and credit research and quantitative analysis forces.

The selection process comprises four phases, each run by ad hoc committees: the identification of macro economic trends, an assessment of the major fixed income asset classes, an allocation by sector, country and maturity as well as risk budget based and finally a portfolio construction based on the aforementioned phases.

The exposure level to Investment Grade Fixed Income and Money Market instruments will be comprised between 50% and 100%.

The exposure to Non Investment Grade Fixed Income instruments such as High Yield debt instruments may reach up to 30% and the cumulated exposure to High Yield and non-rated debt instruments may reach up to 40%.

After hedging, exposure to currencies other than the EUR will be less than 40%.

The sub-fund may not be invested or exposed to equities.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
 - The financial product shall invest at least 15% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 15%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

- #1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2** Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B** Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any

environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

BNP PARIBAS FUNDS EURO GOVERNMENT Product name:

BOND

Legal Entity Identifier: 213800HI1EPYIJX6IX47

Environmental and/or social characteristics

Does this financial product have a sus	tainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Sovereign issuers and agencies

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Corporate issuers

The investment strategy selects corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that

contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Bloombergs Euro Aggregate Treasury 500MM is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in bonds and/or other debt instruments denominated in EUR and issued or guaranteed by a member state of the European Union.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are

share of:
- turnover reflecting
the share of
revenue from green
activities of investee
companies.

expressed as a

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are

whether the

attains the environmental or

social

indexes to measure

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Euro Government Green Bond legal identifier: 213800VHP8SJICD1TU71

SUSTAINABLE INVESTMENT OBJECTIVE

Does this financial product have a sustainable investment objective?		
•• * Yes	• No	
It will make a minimum of sustainable investments with an environmental objective: 80% in economic activities that	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments	
qualify as environmentally sustainable under the EU Taxonomy in economic activities that do	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy	
not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
	With a social objective	
It will make a minimum of sustainable investments with a social objective:%	not make any sustainable investments	

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

What is the sustainable investment objective of this financial product?

The sustainable investment objective of the BNP Paribas Funds Euro Government Green Bond fund is to allocate capital to new and existing projects with environmental benefits by investing in green bonds issued by governments, supranational, sovereign agencies, local entities and/or corporate to finance environmentally sound and sustainable projects that foster a net-zero emissions economy and protect the environment.

The eligible green projects categories include, but are not limited to:

- Renewable energy (including production, transmission, appliances and products);
- Energy efficiency (such as in new and refurbished buildings, energy storage, district heating, smart grids, appliances and products);

- Clean transportation (such as electric, hybrid, public, rail, non-motorized, multi-modal transportation, infrastructure for clean energy vehicles and reduction of harmful emissions);
- Climate change adaptation (including efforts to make infrastructure more resilient to impacts of climate change, as well as information support systems, such as climate observation and early warning systems);
- Green buildings that meet regional, national or internationally recognized standards or certifications for environmental performance.

The selected green bonds should comply with the principles formulated by the International Capital Market Association and receive a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

The sustainable investment objective of the financial product is environmental but mainly outside the scope of the environmental objectives defined by the EU Taxonomy.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective promoted by the financial product:

- The percentage of the financial product's portfolio invested in green bonds compliant with the principles formulated by the International Capital Market Association and having a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center;
- The percentage of the financial product's portfolio compliant with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy;
- The percentage of the financial product's portfolio covered by the ESG analysis based on the proprietary ESG methodology;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the financial product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the Investment Manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in projects that do not meet the fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

— How have the indicators for adverse impacts on sustainability factors been taken into account?

The Investment Manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process; RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

15. GHG intensity

16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

- — How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, the financial product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and the construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support all investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Policy, Engagement and Voting Policy and include the following:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment:
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues.
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

The Product is actively managed. The 50% JPM EMU ex PERIPHERAL + 50% Euro-Aggregate Government-Related (LEGVTREU Index) benchmark is used for performance comparison only. The Product is not benchmark-constrained and its performance may deviate significantly from that of the benchmark.

The Product seeks to increase the value of its assets over the medium term and aims at facilitating or accelerating the transition into a sustainable world by focusing on challenges related to environment by investing at least 75% of its assets in green bonds to finance projects primarily designed to mitigate climate change.

The Product invests at least 2/3 of its assets in green bonds denominated in EUR and issued by or guaranteed by a Member State of the European Union, supranational agencies, sovereign agencies and local entities.

Exposure to high yield bonds in Euro, GBP and USD is limited to a maximum of 25% of the Product's assets.

A maximum of 25% of the Product's assets may be denominated in USD or GBP. After hedging, the Product's exposure to currencies other than Euro may not exceed 10%.

The investment team applies BNP PARIBAS ASSET MANAGEMENT Sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights at each step of the investment process of the Product.

The investment universe of this Product is based on the Green Bond Principles ("GBP")* as formulated by the International Capital Market Association (more information on these principles are available in the following website:

https://www.icmagroup.org/sustainable-finance/the-principles-guidelines-and-handbooks/green-bond-principles-gbp/).

The Product follows the Impact approach which means that the Product invests with the intention to contribute to measurable positive social and/or environmental impact alongside financial returns.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the sustainable investment objective of this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?
 - The financial product shall invest at least 75% of its assets in green bonds compliant with the principles formulated by the International Capital Market Association and having a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center;

• The financial product shall comply with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the Investment Manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>;

- The financial product shall have at least 90% of its assets (excluding investments in ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology;
- The financial product shall invest at least 80% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation and as disclosed in the asset allocation section below. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What is the sustainable investment objective of this financial product?" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance, include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure.
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation and the minimum share of sustainable investments?

The minimum proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 80%.

Good governance

practices include sound management structures, employee relations, remuneration of staff ad tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the sustainable investment objective?

Financial derivative instruments may be used for hedging and/or efficient portfolio management. Either these instruments are not used to attain the sustainable investment objective of the financial product, or they are aligned with the sustainable investment objective of the financial product

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not Applicable.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

are
environmentally
sustainable
investments that
do not take into
account the
criteria for
environmentally
sustainable
economic
activities under
the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 80%.

The objective of the Investment Manager is not to prevent the financial product from investing in taxonomy-aligned activities within the framework of the investment strategy of the financial product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with a social objective?

Not applicable.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments is used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The Investment Manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that financial product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable

investment objective.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More financial product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the financial product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the

or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow

good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS EURO HIGH QUALITY

GOVERNMENT BOND

Legal Entity Identifier: 2138004WDX467P21WX96

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective? Yes No	
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Sovereign issuers and agencies

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Corporate issuers

The investment strategy selects corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that

contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives ${\it Social}$
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Bloomberg Euro Aggregate Treasury AAA is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in euro denominated bonds issued or guaranteed by AAA rated member states of the EMU (or highest possible credit rating available in the market if AAA rated bonds are not sufficiently available). After hedging, there is no exposure to currencies other than euro.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

weighted average ESG score of its investment universe, as defined in the Prospectus

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes,

notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

expressed as a

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP PARIBAS FUNDS EURO HIGH YIELD BOND Legal Entity Identifier: 213800ZVIU1LRMH2HG90

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
Yes	No No
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing

environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

a list of

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as

investment objectives and risk

tolerance.

This Fund is actively managed. The benchmark 100% ICE BofAML European Crncy Non-Fin High Yield BB-B Constrained (hedged in EUR) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in high-yield bonds or other debt instruments denominated in various european currencies.

After hedging, the exposure to currencies other than the euro will not exceed 5%.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT Sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund. An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager. Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these

companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 40%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments may include:

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an

environmental objective.

Transitional activities are activitie low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?
 Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are

whether the

social

indexes to measure

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and

that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS EURO HIGH YIELD SHORT
DURATION BOND

Legal Entity Identifier: 213800XCXV4261JS0U74

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective? Yes No	
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark ICE BofAML Q6AL Custom Index (Hedged in EUR) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in high-yield bonds or other debt instruments that are rated below Baa3 (Moody's) or BBB- (S&P/Fitch) denominated in various European currencies with an average maturity that does not exceed three years. The Fund can invest in low rated bonds which may increase the default risk of the fund.

The sub-fund may not be invested in securities with a rating below CCC- (S&P/Fitch) or Caa3 (Moody's).

After hedging, the exposure to currencies other than EUR will not exceed 5%.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents -**BNPP** English Sustainability documents AM Corporate (https://www.bnpparibas-am.com/sustainability-documents/)

investment

tolerance.

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 42%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a

- turnover reflecting the share of revenue from green activities of investee companies.

share of:

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B** Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

	It will make a minimum of sustainable investments with a social objective:%	x It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Sovereign issuers and agencies

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Corporate issuers

The investment strategy selects corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The financial product does not intend to make any sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The financial product does not intend to make any sustainable investment.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Not applicable

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Not applicable

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Bloomberg Euro Government Inflation Linked is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in bonds or other debt instruments denominated in EUR and linked to the Eurozone inflation rate.

The Fund may use financial derivative instruments on futures markets regulated in Europe or abroad to hedge against and/or expose the portfolio to bonds risks and to achieve the investment objective.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the investment manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 0%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards :

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

make a substantial contribution to an environmental objective.

Transitional

Enabling activities

directly enable other activities to

activities are activities for which low-carbon alternatives are not

yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?
 Not applicable

investments with an

economic activities under the EU

environmental

criteria for environmentally sustainable

Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Not applicable

What is the minimum share of socially sustainable investments?

Not applicable.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly

harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

Product name : BNP PARIBAS FUNDS EURO MEDIUM TERM BOND

Legal Entity Identifier: 213800W47YB3LT62YH87

Environmental and/or social characteristics

Does this financial product have a sus	etainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 25.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Bloomberg Euro Aggregate 3-5 Years Linked is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in bonds and other debt instruments denominated in EUR with an average maturity that does not exceed six years. Investment grade structured debts may represent up to 20% of the assets.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

weighted average ESG score of its investment universe, as defined in the Prospectus

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 25% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 25%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes,

notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

expressed as a

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	No No	
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10.00% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing

environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

a list of

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark €STR is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund belongs to the category of money market funds («MMF») as defined by Regulation (EU) 2017/1131 of the European Parliament and of the Council of 14 June 2017 on money market funds (the «Regulation»). It seeks to achieve the best possible return in EUR in line with prevailing money market rates, over a 3-month period while aiming to preserve capital consistent with such rates and to maintain a high degree of liquidity and diversification, the 3-month period corresponds to the recommended investment horizon of the sub-fund.

The Fund is a standard variable net asset value MMF as defined by the Regulation.

It invests within the limits of the Regulation in a diversified portfolio of EUR denominated money market instruments, deposits with credit institutions, repurchase agreements and reverse repurchase agreements, units or shares of short term MMF or other standard MMF, and ancillary liquid assets denominated in EUR.

Financial derivative instruments (e.g. Interest Rate Swaps) are used only for the purpose of hedging the interest rate of the Fund. The impact of these financial derivative instruments will be taken into account for the calculation of the Weighted Average Maturity.

The Fund is not a guaranteed product. There is no currency exposure, other than to the EUR.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

The investment

strategy guides

factors such as

decisions based on

objectives and risk

investment

investment

tolerance.

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 10% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 10%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

social

indexes to measure

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental
or social objective,
provided that the
investment does
not significantly
harm any
environmental or
social objective and
that the investee

companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS EURO SHORT TERM CORPORATE BOND OPPORTUNITIES

Legal Entity Identifier: 549300JJAXA72XVPGM77

Environmental and/or social characteristics

Does this financial product have a sus	stainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 25.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

This Fund is actively managed. The benchmark ICE BofAML EMU Corporate 1-3 Years is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets by appreciating the performance on 2 axes (income and/or dividend coming from by investments and capital appreciation coming from market price changes) over the medium term by investing primarily in euro denominated bonds while maintaining the duration at a low level.

Investment grade structured debts may represent up to 20% of the assets.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents -

Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 25% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include sound management

employee relations, remuneration of

structures,

staff and tax

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 44%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 25%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental

objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

list of socially

sustainable economic activities.

Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- $4.\ A$ company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters,

respect for human

anti-corruption and anti-bribery matters.

rights,

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Refinitiv Convertible Europe (Hedged in EUR) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in convertible bonds denominated in EUR, and/or issued by European companies or companies operating in Europe.

After hedging, the exposure to currencies other than EUR may not exceed 5%.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents -**BNPP** Sustainability documents AM (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus

strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The investment

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 40%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are

share of:
- turnover reflecting
the share of
revenue from green
activities of investee
companies.

expressed as a

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities? Not applicable

investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective? Yes No social objective and It will make a minimum of It promotes Environmental/Social (E/S) sustainable investments with characteristics and while it does not have an environmental objective: as its objective a sustainable investment, _% it will have a minimum proportion of ____% of sustainable investments The EU Taxonomy is in economic activities that system, establishing with an environmental objective in economic qualify as environmentally activities that qualify as environmentally sustainable under the EU sustainable under the EU Taxonomy Taxonomy with an environmental objective in in economic activities that do economic activities that do not qualify as not qualify as environmentally environmentally sustainable under the EU it does not include a sustainable under the EU Taxonomy Taxonomy with a social objective It will make a minimum of It promotes E/S characteristics, but will sustainable investments with a not make any sustainable investments social objective: ____%

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse **impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The financial product does not intend to make any sustainable investment.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The financial product does not intend to make any sustainable investment.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Not applicable

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Not applicable

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

x N

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

tolerance.

This Fund is actively managed. The benchmark MSCI EM Europe 10/40 (NR) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by companies from or operating in European emerging countries.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
 - The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors

- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 0%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 0%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned

activities are

- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

M

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP PARIBAS FUNDS EUROPE EQUITY Legal Entity Identifier: 213800QR2HMXARPGFK67

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
Yes	No No
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 45.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing

environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

a list of

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- $4.\ A$ company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters,

respect for human

anti-corruption and anti-bribery matters.

rights,

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by European companies, with a solid financial structure and/or potential for earnings growth.

Although the majority of the Fund equity securities may be components of the index MSCI Europe (NR) (the «benchmark»), the Investment Manager uses its wide discretion in relation to the benchmark to invest in companies and sectors not included in the benchmark in order to take advantage of specific investment opportunities. Industry analysis is first undertaken to assess the structural characteristics of the industry in which each company operates. The stock selection is then achieved by placing substantial importance on the generation of detailed, proprietary research at company level. The Investment Manager seeks to exploit the market's increasing short-term focus by investing in companies when their attractive, longer-term investment attributes are masked by shorter term trends, fashion or random noise. The end result is a high conviction portfolio with investments made in approx. 40 companies characterized by the quality of their financial structure and/or potential for earnings growth. Internal investment guidelines have been defined, including in reference to the benchmark, and are regularly monitored to ensure the investment strategy remains actively managed, while staying within pre-defined risk levels.

Nevertheless, due to similar geographical constraint, investors should be aware that the Fund's risk and return profile may, from time to time, be comparable to the risk and return profile of the benchmark.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies

objectives and risk

tolerance.

due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 45% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 45%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?
 Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 10%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are

attains the environmental or

social

indexes to measure

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS FUNDS EUROPE GROWTH Legal Entity Identifier : 54930076YNZFEK14YJ47

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee

companies follow good governance practices.

Sustainable

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
Yes	No No
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 45.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	x with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- $4.\ A$ company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters,

respect for human

anti-corruption and anti-bribery matters.

rights,

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark MSCI Europe (NR) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark. The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by European companies, with greater-than-average potential for growth and/or relatively stable growth in profits. Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents -Sustainability documents **BNPP** Corporate (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

the ESG analysis based on the ESG internal proprietary methodology

- The financial product shall invest at least 45% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 45%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards :

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B** Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

other activities to make a substantial contribution to an environmental objective. Transitional

Enabling activities

directly enable

Transitional activities are activities for which low-carbon alternatives are not

yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 10%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and

that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS EUROPE HIGH Legal Entity Identifier : 21380048HKTFQR2XST10 CONVICTION BOND

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective? Yes No	
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

This Fund is actively managed. The benchmark Bloomberg Euro Aggregate Bond RI is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by implementing a discretionary managed portfolio invested in debt securities.

It will be mainly invested in corporate, and government bonds issued in European currencies.

The Fund may also be invested in money market instruments for less than 50% of the assets.

The Fund may be also invested up to 10% in different categories of contingent convertible bonds or subordinated debt or structured debt or convertible.

Investment in currencies other than EUR may not represent more than 40% of the assets.

Debt securities may have a minimum rating of BB-/Ba3/BB- (S&P / Moody's / Fitch) or an equivalent rating. Non-investment grade and/or speculative securities may have a maximum rating BB+/Ba1/BB+ to BB-/Ba3/BB- (S&P / Moody's / Fitch) will not represent more than 20% of the assets.

The investment process is based on the economic analysis, the credit risk, the inflation cycles as well as technical elements specific to the fixed income markets such as the objective to maintain the interest rate sensitivity between 0 and 10, the yield curve positioning, the geographical exposures, the target allocation corporate versus government issues, the difference between nominal and real yields.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the

manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
 - The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product,

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Yes No It will make a minimum of It promotes Environmental/Social (E/S) sustainable investments with characteristics and while it does not have an environmental objective: as its objective a sustainable investment, _% it will have a minimum proportion of 50.00% of sustainable investments in economic activities that with an environmental objective in economic Χ qualify as environmentally activities that qualify as environmentally sustainable under the EU sustainable under the EU Taxonomy Taxonomy with an environmental objective in in economic activities that do economic activities that do not qualify as not qualify as environmentally environmentally sustainable under the EU sustainable under the EU Taxonomy Taxonomy with a social objective It will make a minimum of It promotes E/S characteristics, but will sustainable investments with a not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- The percentage of the financial product's portfolio invested in investments aligned with the EU Taxonomy
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- $4.\ A$ company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human

anti-corruption and anti-bribery matters.

rights,

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark FTSE EPRA NAREIT Europe (25% UK Capped) 8/32 (NR) (Lux tax rate) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by European real estate companies, or companies that operate in the European real estate sector. The Fund does not invest in real estate directly.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents -Sustainability documents **BNPP** AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

weighted average ESG score of its investment universe, as defined in the Prospectus

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- The financial product shall invest at least 2% of its assets in investments aligned with the EU Taxonomy as disclosed below

• What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes,

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are

- Taxonomy-aligned activities are expressed as a share of:
 turnover reflecting
- the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and Taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

The minimum share of investments in transitional and enabling activities in the meaning of the Taxonomy Regulation is 0% in transitional activities and 0% in enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Not applicable

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

are sustainable

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- $4.\ A$ company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters,

respect for human

anti-corruption and anti-bribery matters.

rights,

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The MSCI Europe Small Caps (NR) benchmark is used for 1) the investment universe selection, and 2) performance comparison. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares of small European

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents -Sustainability documents **BNPP** AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are

share of:
- turnover reflecting
the share of
revenue from green
activities of investee
companies.

expressed as a

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- $4.\ A$ company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters,

respect for human

anti-corruption and anti-bribery matters.

rights,

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Refinitiv Convertible Europe (EUR) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in convertible bonds issued by European companies or companies operating in Europe. The Fund will focus on small-sized issues.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the investment manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents -Sustainability documents **BNPP** AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

weighted average ESG score of its investment universe, as defined in the Prospectus

- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 10% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 40%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 10%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes,

notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities? Not applicable

investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or

social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives ${\it Social}$
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The Cash Index EURIBOR 3 Months is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark. The Fund seeks to increase the value of its assets over the medium term by using three types of investment strategies which are expected to present a low correlation of their individual returns over a long term period. The Fund invests at least 70% of its assets in bonds and/or equivalent debt instruments, money market instruments and derivatives, denominated in EUR, USD or GBP. Next to that, the Fund will implement a set of «flexible beta» derivatives strategies, aiming at managing actively its exposure to both interest rate and credit risk. Finally, the sub-fund will invest in a selection of «pure alpha» strategies, seeking to enhance the return of the portfolio by allocating dynamically between both interest rates and currencies worldwide. It may have an exposure to equity. Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

decisions based on factors such as investment objectives and risk tolerance.

The investment

strategy guides

investment

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 26% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 26%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a

- turnover reflecting the share of revenue from green activities of investee companies.

share of:

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B** Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities? Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 6%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental
or social objective,
provided that the
investment does
not significantly
harm any
environmental or
social objective and
that the investee
companies follow

good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

It will make a minimum of sustainable investments with a	It promotes E/S characteristics, but will not make any sustainable investments	
social objective:%		

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The Fund is actively managed without reference to an index.

The Fund seeks to achieve an absolute performance that is higher than the rate of return on the euro money market over the medium term by investing in government bonds.

The investment team will invest in treasury bills, commercial paper, deposits or investment grade bonds with residual maturity up to 12 months and it will implement an active allocation strategy between government bonds futures and interest rate swaps.

It will implement an active allocation strategy between government bonds futures and interest rate swaps (the «BCA Strategy»). The BCA Strategy aims at benefiting from long-term interest rate differentials between major countries government bonds or interest rate swaps, in order to generate absolute performance. The BCA Strategy is based on a quantitative allocation model between six countries: the United States of America, Japan, Germany, the United Kingdom, Australia and Canada. The model aggregates several technical and macro-economic indicators, such as (but not limited to) the slope and convexity of yield curves, unemployment or money supply in the relevant countries. The BCA Strategy is implemented systematically through the use of listed bond futures or vanilla interest rate swaps, taking both long and short positions.

The allocation to the BCA Strategy follows a risk-based approach, sizing exposures to target over the medium to long-term, an annual volatility contribution of 4% to 5% from the BCA Strategy. The allocation to the BCA Strategy may however be reduced temporarily (down to zero) for instance in case of limited liquidity conditions (at year's end, typically) or exceptional events which could invalidate the indicators used by the allocation model.

After hedging, the exposure to currencies other than EUR may not exceed 5%.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the

objectives and risk

tolerance.

manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
 - The financial product shall invest at least 25% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product,

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a

- **turnover** reflecting the share of revenue from green activities of investee companies.

share of:

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 25%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 9%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 7%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow

good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS GLOBAL BOND

OPPORTUNITIES

Environmental and/or social characteristics

Legal Entity Identifier: 213800BK6M5X4LRSZE11

Does this financial product have a sustainable investment objective? Yes No	
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	x with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Bloomberg Barclays Global Aggregate (hedged in EUR) RI is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in investment grade bonds and/or other debt instruments, denominated in various currencies and issued by companies all over the world. The Fund will use different strategies in the portfolio to ensure diversification and flexibility. The weighting of the different strategies may vary over time according to the evolution of market conditions and to reflect the anticipations of the investment team.

The Fund may invest up to 100% of its assets in structured debt instruments.

After hedging, the exposure to currencies other than EUR may not exceed 20%.

The sub-fund may be invested into debt securities traded on the China Interbank Bond market.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral

exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

structures,

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an

environmental objective.

Transitional activities are activitie low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

and that the investee

What is the sustainable investment objective of this financial product?

The sustainable investment objective of the BNP Paribas Funds Global Climate Solutions fund is to participate in the transition into a sustainable world by focusing on challenges related to the environment across global markets, primarily climate change and nature degradation.

At all times, this thematic sub-fund invests in equities and/or equity equivalent securities issued by worldwide companies

These companies provide through their products, services or processes solutions to aquatic, terrestrial, and urban ecosystems, as well as renewable energy production, energy efficiency, energy infrastructure and transportation.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- The Aquatic Ecosystem covers ocean and water systems including, but not limited to, water pollution control, water treatment and infrastructure, aquaculture, hydropower, ocean & tidal power and biodegradable packaging.
- The Terrestrial Ecosystem covers land, food and forestry including, but not limited to, agricultural technology, sustainable farming, sustainable forestry and plantations as well as alternative meat and dairy products.
- The Urban Ecosystem covers our sustainable cities & buildings including, but not limited to, environmental services, green buildings, green building equipment and materials, recycling, waste management and alternative transportation.
- The Renewable Energy Production refers to decarbonizing the energy system through production of renewable and transitional energy.
- The Energy Efficiency, Technology & Materials refers to digitalizing the energy system through electrification, efficiency and technology.
- The Energy Infrastructure & Transportation refers to decentralizing the energy system through new infrastructure, distributed energy and battery storage.

Sustainable investments underlying the financial product contribute to the six environmental objectives set out in Article 9 of Regulation (EU) 2020/852, these are climate change mitigation, climate change adaptation and transition to a circular economy, sustainable use & protection of water & marine resources, transition to a circular economy, waster prevention and recycling, pollution prevention and control, protecting the ecosystem.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product:

- The percentage of the financial product's portfolio invested in companies with at least a 20% of revenue, profit or invested capital aligned with the financial product's thematics.
- The percentage of the financial product's portfolio compliant with the BNP Paribas Asset Management Responsible Business Conduct Policy (RBC Policy);
- The percentage of the financial product's assets covered by the ESG analysis based on the proprietary ESG methodology (excluding ancillary liquid assets);
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation;
- The percentage of the financial product's portfolio aggregate Revenue which is "EU Taxonomy Aligned" as defined by Regulation (EU) 2020/852.
- How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR where these are relevant and material to the investment strategy, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

— How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process and as further detailed below in this document; RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, the product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, and depending on composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- $5.\ Share\ of\ non-renewable\ energy\ consumption\ and\ production$
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

Nο

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark MSCI ACWI (EUR) NR is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by companies engaging in climate solutions across global markets. These companies provide through their products, services or processes solutions to aquatic, terrestrial, and urban ecosystems, as well as renewable energy production, energy efficiency, energy infrastructure and transportation.

The Fund may be exposed to emerging markets up to 50% of its assets. It may be invested up to 20% of the Fund's assets in Mainland China shares restricted to foreign investors such as China A shares, which can be listed on a Stock Connect or through a use of a specific license granted by the Chinese authorities.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's Responsible Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights at each step of the investment process of the Fund.

The Fund follows the Thematic approach which means that the Fund invests in companies that provide products and services providing concrete solutions to specific environmental challenges, seeking to benefit from future growth anticipated in these areas while contributing capital towards the transition towards a low-carbon economy operating in harmony with nature.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the sustainable investment objective of this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;
 - More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)
- The financial product shall invest in companies with at least a 20% of revenue, profit or invested capital aligned with the financial product's thematics;

strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology;
- The financial product shall invest at least 85% of its portfolio in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" and the quantitative and qualitative thresholds are indicated in the main part of the Prospectus.
- The financial product's shall invest at least 5% of its assets in companies "EU Taxonomy Aligned".

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance, through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance, include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation and the minimum share of sustainable investments?

The minimum proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 85%.

Asset allocation describes the share of investments in specific assets.

Good governance

sound management

employee relations,

remuneration of

practices include

structures,

staff ad tax

compliance.

How does the use of derivatives attain the sustainable investment objective?

Financial derivative instruments may be used for hedging and/or efficient portfolio management and/or investment purposes. Either these instruments are not used to attain the sustainable investment objective of the product, or they are aligned with the sustainable investment objective of the financial product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and Taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The minimum share of investments in transitional and enabling activities in the meaning of the Taxonomy Regulation is 0% in transitional activities and 0% in enabling activities.

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the

environmentally sustainable investments that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP PARIBAS FUNDS GLOBAL CONVERTIBLE Legal Entity Identifier: 2138001TD2MSZQT66F42

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective? Yes No It will make a minimum of It promotes Environmental/Social (E/S) sustainable investments with characteristics and while it does not have an environmental objective: as its objective a sustainable investment, _% it will have a minimum proportion of 15.00% of sustainable investments in economic activities that with an environmental objective in economic qualify as environmentally activities that qualify as environmentally sustainable under the EU sustainable under the EU Taxonomy Taxonomy with an environmental objective in in economic activities that do economic activities that do not qualify as not qualify as environmentally environmentally sustainable under the EU sustainable under the EU Taxonomy Taxonomy with a social objective Х It will make a minimum of It promotes E/S characteristics, but will sustainable investments with a not make any sustainable investments social objective: ____%

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the

investment does

not significantly harm any

environmental or social objective and

that the investee

companies follow

good governance practices.

The EU Taxonomy is a classification

system, establishing

environmentally

economic activities.

For the time being,

it does not include a

a list of

sustainable

list of socially

sustainable economic activities.

Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse **impacts** are the

most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery

matters.

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Refinitiv Convertible Global Focus (Hedged in EUR) RI is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in convertible bonds issued by companies from all over the world or by getting exposure to such asset class through the use of fixed income instruments and financial derivative instruments. The manager aims to optimise the risk-return characteristics of the Fund by investing in «mixed convertibles», avoiding convertible bonds that behave like pure bonds or pure equities. After hedging, the exposure to currencies other than USD may not exceed 25%.

It may be invested in Mainland China shares restricted to foreign investors such as China A shares which can be listed on a Stock Connect or through a use of a specific license granted by the Chinese authorities.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents -

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 15% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include sound management

employee relations, remuneration of

structures,

staff and tax

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 47%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 15%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score

Asset allocation
describes the share
of investments in
specific assets.
Taxonomy-aligned
activities are
expressed as a

- **turnover** reflecting the share of revenue from green activities of investee companies.

share of:

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B** Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or

social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS GLOBAL ENHANCED BOND 36M

Legal Entity Identifier: 213800DVKBMCKTL76304

Environmental and/or social characteristics

	Does this financial product have a sust	tainable investment objective?
	It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments
Ţ,	in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	Taxonomy	x with a social objective
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The Fund seeks to achieve returns that are higher than the Euro money market over a medium-term investment horizon of around 36 months by using an enhanced bond strategy aims to generate positive returns by utilizing a global, diverse opportunity set of fixed income and money market instruments (and derivatives related to these instruments), while maintaining a very liquid portfolio with low interest rate sensitivity. Most importantly, the Fund is guided by the philosophy that no single investment sector, strategy, allocation or theme should dominate over time. It is based on active management based on a systematic and disciplined approach to securities selection, combining extra-financial research, financial research and quantitative analysis. Exposure to currencies other than the EUR will be less than 25%.

The Fund may be exposed to

- 1) Investment Grade bonds, in a range between 40% and 100% of its assets, and
- 2) Non-Investment Grade bonds (including High Yield Corporate bonds and structured debt) in a range between 0% and 60% of its assets.

It may not be invested in equities.

It is actively managed against the Daily Capitalized €str.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment

strategy guides

factors such as

decisions based on

objectives and risk

investment

investment

tolerance.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
 - The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Enabling activities directly enable other activities to make a substantial contribution to an environmental

objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best

performance.

Not applicable

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?

Not applicable

environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics

promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

practices.

and that the investee

What is the sustainable investment objective of this financial product?

The sustainable investment objective of the BNP Paribas Global Environment is to help or accelerate the transition into a sustainable world by focusing on challenges related to the environment.

At all times, this financial product invests in equities and/or equity equivalent securities issued by companies that conduct a significant part of their business in Environmental markets. "Environmental markets" include, but not limited to, Renewable & Alternative Energy, Energy Efficiency, Water Infrastructure & Technologies, Pollution Control, Waste Management & Technologies, Environmental Support Services, and Sustainable Food.

Sustainable investments underlying the financial product contribute to two of the environmental objectives set out in Article 9 of Regulation (EU) 2020/852, these are climate change mitigation and climate change adaptation.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product:

- The percentage of the financial product's portfolio invested in companies with at least a 20% of revenue, profit or invested capital aligned with the financial product's thematics;
- The percentage of the financial product's portfolio compliant with the BNP Paribas Asset Management Responsible Business Conduct Policy (RBC Policy);
- The percentage of the financial product's assets covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology (excluding ancillary liquid assets);
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation;
- The percentage of the financial product's portfolio aggregate Revenue which is "EU Taxonomy Aligned" as defined by Regulation (EU) 2020/852.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

In order to ensure that the sustainable investments that the financial product intends to make do not cause significant harm to any environmental or social sustainable objective, the financial product assesses each investment against a set of indicators of adverse impacts by conducting proprietary Fundamental ESG analysis for all portfolio holdings. The ESG analysis aims to identify the quality of governance structures, the most material environmental and social harms for a company or issuer and assesses how well these harms are addressed and managed. The Investment Manager seeks robust policies, processes, management systems and incentives as well as adequate disclosure, as applicable. Additionally, the Investment Manager assesses any past controversies identified. A proprietary aggregate ESG score is then assigned for each company or issuer taking into account the indicators as set out below, based on a qualitative judgement. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the financial product's investable universe. The Investment Manager considers it important to engage with companies and issuers and to analyse company and issuer disclosures and reports. The ESG process is proprietary to the Investment Manager, although the Investment Manager uses external ESG-research as an input.

— How have the indicators for adverse impacts on sustainability factors been taken into account?

Indicators for adverse impacts on sustainability factors have been taken into account in the Investment Manager's Fundamental ESG analysis as follows – the data considered, as prescribed by SFDR, by the Investment Manager to assess the relevant indicator is set out in the first paragraph under each indicator below:

Mandatory Indicators

GHG emissions, carbon footprint and GHG intensity of investee companies

Data considered: an investee company's absolute scope 1, 2 and 3 GHG emissions, and its enterprise value and revenue.

Companies are tiered between those providing full disclosure of Scopes 1, 2, 3 emissions across the majority of their operations; reporting across all four pillars prescribed by the Task Force on Climate related Financial Disclosures (TCFD); having set stretching short-medium term target (3+ years), as well as a Net zero/Paris Agreement aligned/Science-based long term target (10-30 years) and detailed actions plans versus those with no emission disclosure in place, no targets and no clear commitment to setting one.

Exposure to companies active in the fossil fuel sector

Data considered: an investee company's exposure to fossil fuel revenues.

The Investment Manager evaluates a company's transition to a low carbon economy by working towards ambitious science-based Paris-aligned decarbonisation targets and by strategically phasing out any fossil fuel exposure.

Share of non-renewable energy consumption and production, and energy consumption intensity per high impact climate sector

Data considered: an investee company's total energy consumption and production as well as the consumption and production from non-renewable energy sources, and an investee company's output metric as the basis of energy intensity.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks prescribed by the International Sustainability Standards Board (ISSB), the Global Reporting Initiative (GRI) and the CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Activities negatively affecting biodiversity-sensitive areas

Data considered an investee company's sites/operations located in or near to biodiversity-sensitive areas.

The Investment Manager uses external tools and research as well as its own proprietary analysis in assessing companies' management of nature-related harms. The Investment Manager seeks investment in companies or issuers that have addressed the harm with robust policies, processes, management systems and incentives that are scaled appropriately to the importance of the harm. Site-level geolocation data and regional exposure are not always easily available or disclosed by companies and issuers. The Investment Manager engages with companies to achieve geo-location data and to assess the potential harm at the specific locations of interest, for example highlighting habitats of IUCN Red List species (the International Union for Conservation of Nature), protected areas and key biodiversity areas in the vicinity.

Emissions to water, and hazardous waste and radioactive waste ratio

Data considered: an investee company's generated tonnes of emissions to water, and tonnes of hazardous waste and radioactive waste.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

Data considered: an investee company's involvement in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.

The Investment Manager screens the Sub-Fund's investments against adherence to global standards such as the UN Global Compact principles and OECD Guidelines for Multinational Enterprises. An external research provider is used to support this screening activity. A company found to be in breach of these international norms and standards is excluded from the investable universe and divested. Where a company is flagged for potential breaches, the Investment Manager will monitor and seek to engage, as appropriate.

Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

Data considered: instances where an investee company is lacking policies to monitor compliance with the UNGC Principles or OECD Guidelines.

The Investment Manager uses external tools and research to assertain the existence/non-existence of these policies and identify those companies that do not satisfy credible policy standards in all those areas that speak to UNGC principles or the OECD Guidelines.

Unadjusted gender pay gap

Data considered: an investee company's average gross hourly earnings of male paid employees and of female paid employees as a percentage of average gross hourly earnings of male paid employees.

Companies are assessed for their pay equity through review of the pay gap, were available, alongside a broader set of KPIs related to Equality, Diversity & Inclusion (ED&I). Companies are tiered between those demonstrating state of the art management processes and those with no ED&I disclosure.

Board gender diversity

Data considered: an investee company's number of women on the board of directors and percentage of board members that are female.

Companies are assessed for their board gender diversity alongside other key roles which influence company strategy alongside a broader set of metrics related to leadership diversity. Companies are tiered between those achieving 40%-60% women on the board and in executive management as well as demonstrating diversity in key roles and those with no women on the board or in executive management.

Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Data considered: an investee company's exposure to controversial weapons through business activity and ownership.

Companies are screened by business activity in an effort to ensure, using a combination of screen activity and the Investment Manager's qualitative judgement, that they are not involved in the activity of manufacturing or of manufacturing tailor-made components, using, repairing, putting up for sale, selling, distributing, importing or exporting, storing or transporting controversial or indiscriminate weapons such as anti-personnel mines, submunitions, inert ammunition and armour containing depleted uranium or any other industrial uranium, weapons containing white phosphorus, biological, chemical or nuclear weapons. The Investment Manager seeks to exclude all companies with any involvement in controversial weapons from investment and in addition uses qualitative judgement as part of the analysis. If the Investment Manager determines that one of these activities takes place within a subsidiary, the direct parent company is also considered to be involved in controversial weapons if it holds a majority equity interest in the subsidiary. Likewise, if one of the above-mentioned activities is determined to take place within a parent company, any majority-owned subsidiary of this parent company is also deemed to be involved.

Voluntary Indicators

Investments in companies without carbon emission reduction initiatives

Data considered: instances where an investee company is lacking of all of the following: near-term GHG reduction target, long-term GHG reduction target (10+ years), science-based GHG reduction target, Net Zero commitment.

The Investment Manager actively seeks to engage with companies to encourage the implementation of effective performance management systems, with the objective to establish GHG emissions baseline data (scope 1, 2 and 3), set science-based long-term carbon emission reduction targets with a viable action plan to deliver on these targets, and regularly report.

Water usage and recycling

Data considered: an investee company's operational water use (cubic meters of water consumed), and water management (percentage of water recycled and reused).

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws

Data considered: an investee company's number of convictions per severity category in the past three to five years (three years for minor controversies or incidents; five years for more significant controversies or incidents).

The materiality and severity of convictions and fines for violation of anti-corruption and anti-bribery laws are reviewed as part of the Fundamental ESG analysis.

- — How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The Investment Manager uses a Global Standards Screening which assesses companies' impact on stakeholders and the extent to which a company causes, contributes or is linked to violations of international norms and standards. The underlying research provides assessments covering the OECD Guidelines for Multinational Enterprises and the UN's Global Compact Principles, as well as International Labour Organization's (ILO) Conventions, and the UN Guiding Principles on Business and Human Rights (UNGPs). A company found to be in breach of these international norms and standards is excluded from the investable universe and divested. Where a company is flagged for potential breaches, the Investment Manager will monitor and seek to engage, as appropriate.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, The Sub-Fund considers principal adverse impacts on sustainability factors by identifying, assessing, and managing negative effects of portfolio-related investment decisions on environmental, social and employee matters, respect for human rights, and anti-bribery & corruption matters.

The following illustrates how this exposure is intended to be managed, once identified and assessed, taking into account each of the mandatory and voluntary indicators listed above.

- 1. All companies and other issuers must meet financial and ESG criteria before entering the Sub-Fund's list of investable companies. When all the data is gathered, an ESG report is written and a proprietary aggregate ESG score assigned. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the investable universe. In cases where a company has a low ESG score, but is not deemed to cause significant harm and is not excluded, the company will have a capped position size in the portfolio, for risk management reasons. The Investment Manager does not seek to exclude a certain number or percentage of companies or issuers, but rather seeks an absolute level of ESG quality based on a qualitative judgement.
- 2. Bottom-up company-specific engagement: As part of the Investment Manager's ongoing, proprietary company and issuer-level ESG analysis, it identifies company and issuer-specific matters and risks and actively engages with companies and issuers about these matters. For the bottom-up, company specific engagements, the objective is typically to solve or improve the issue that has been identified as part of ESG analysis and when that objective has been achieved, move to the next objective or pause the engagement.

Top-down strategic engagement: Every year the Investment Manager assesses and outlines the engagement priorities for the next 12 months. These priorities are based on market developments and emerging sustainability issues that are considered relevant and material for companies and issuers. The Investment Manager then identifies the companies and issuers which it considers are most exposed to these topics and focuses its engagement on specific companies and issuers. For the strategic engagement areas, the Investment Manager sets up specific steps as objectives that it seeks to reach with the engagements. The strategic engagement areas have analysts assigned as leads for each of the areas of engagement.

3. Where the Investment Manager identifies unmanaged risk, and its usual management approach to engagement fails to produce positive outcomes, its Escalation Policy takes hold.

If the Investment Manager views the investee company or issuer is unresponsive to engagement or unwilling to consider alternative options posing less significant risks to shareholders, the Investment Manager will escalate the dialogue by:

- Seeking alternative or more senior contacts within the company or issuer
- Intervening or engaging together with other shareholders
- Intervening or engaging together with other institutions or organisations (multistakeholder)
- Highlighting the issue and/or joint engagements regarding the issue through institutional platforms and/or
- Filing or co-filing resolutions at General Meetings

If interventions are unsuccessful and the Investment Manager considers that the risk profile of the company has significantly deteriorated or company strategy/governance structures have altered because of an incident, to a degree where the return outlook and the company's strategy and quality no longer meet expectations, the company would be excluded from the investable universe and/or sold.

Information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark MSCI World NR is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark. The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by companies that operate in environmental markets. Environmental markets include, but not limited to, Renewable & Alternative Energy, Energy Efficiency, Water Infrastructure & Technologies, Pollution Control, Waste Management & Technologies, Environmental Support Services, and Sustainable Food. It may be invested in Mainland China shares restricted to foreign investors such as China A shares which can be listed on a Stock Connect or through a use of a specific license granted by the Chinese authorities. The investment team applies also BNP PARIBAS ASSET MANAGEMENT'S sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund. The Fund follows the Thematic approach which means that the Fund invests in companies that provide products and services providing concrete solutions to specific environmental and/or social challenges, seeking to benefit from future growth anticipated in these areas while contributing capital towards the transition towards a low-carbon, inclusive economy. The approach is implemented in order to consistently eliminate at least 20% of the investment universe being companies conducting significant part of their business in environmental markets. An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the sustainable investment objective of this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>.

- The financial product shall invest in companies with at least a 20% of revenues aligned with the financial product's thematics;
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology;
- The financial product shall invest at least 85% of its portfolio in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" and the quantitative and qualitative thresholds are indicated in the main part of the Prospectus.
- The financial product's shall invest at least 2% of its assets in companies "EU Taxonomy Aligned".

Good governance practices include sound management structures, employee relations, remuneration of staff ad tax compliance.

What is the policy to assess good governance practices of the investee companies?

Pre investment

The Investment Manager analyses companies' governance structures taking into account what constitutes common and best global practice for governance and identifying potential outliers. Once the governance and other ESG analytical data is gathered, an ESG report is produced and a proprietary ESG score is assigned as part of the Fundamental ESG analysis as described above.

Post investment

The Investment Manager's proxy voting is predominantly related to governance issues such as the election of directors, board structures and management remuneration. When practicable, the Investment Manager seeks to engage with the investee company before voting against management's recommendation on an AGM resolution. The Investment Manager is also in dialogue with companies throughout the year to discuss and comment on proposed governance structures.

What is the asset allocation and the minimum share of sustainable investments?

The minimum proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 85%.

Asset allocation describes the share of investments in specific assets.

- Taxonomy-aligned activities are expressed as a share of:
- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the sustainable investment objective?

Financial derivative instruments may be used for hedging and/or efficient portfolio management and/or investment purposes. Either these instruments are not used to attain the sustainable investment objective of the product, or they are aligned with the sustainable investment objective of the financial product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation and climate change adaptation are disclosed in the two graphs below.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*}For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The minimum share of investments in transitional and enabling activities in the meaning of the Taxonomy Regulation is 0% in transitional activities and 0% in enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

are
environmentally
sustainable
investments that
do not take into
account the
criteria for
environmentally
sustainable
economic activities
under the EU
Taxonomy.

What is the minimum share of sustainable investments with a social objective?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective,

provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

BNP PARIBAS FUNDS GLOBAL HIGH YIELD Product name:

BOND

Legal Entity Identifier: 213800I5ZTZ8DMKTK650

Environmental and/or social characteristics

Does this financial product have a sus	stainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark 100% ICE BofAML BB-B Non-Fin Dev Markets High Yield Constr (Hedged in EUR) RI is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in high-yield bonds or other debt instruments denominated in various currencies. After hedging, the exposure to currencies other than the euro will not exceed 5%.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the

strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

weighted average ESG score of its investment universe, as defined in the Prospectus

- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 10% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 26%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 10%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes,

notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B** Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Not applicable

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a

- **turnover** reflecting the share of revenue from green activities of investee companies.

share of:

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

social

indexes to measure

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental
or social objective,
provided that the
investment does
not significantly
harm any
environmental or
social objective and
that the investee
companies follow

good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: BNP PARIBAS FUNDS GLOBAL Legal Entity Identifier: 549300S7589QFX0MGS37 INFLATION-LINKED BOND

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	No No	
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective:%	x It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Sovereign issuers and agencies

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Corporate issuers

The investment strategy selects corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The financial product does not intend to make any sustainable investment.

Principal adverse **impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The financial product does not intend to make any sustainable investment.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Not applicable

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Not applicable

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Bloomberg Barclays World Government Inflation-Linked Bond (Hedged in EUR) RI is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in bonds linked to inflation rates and/or other debt instruments and also financial derivative instruments, denominated in any currency, that are issued or guaranteed by a member state of the OECD.

After hedging, the Fund's exposure to currencies other than EUR will not exceed 25%.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the BNP Paribas Group's controversial countries framework and BNP Paribas Asset Management RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 0%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards :

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a

- **turnover** reflecting the share of revenue from green activities of investee companies.

share of:

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

other activities to make a substantial contribution to an environmental objective. Transitional

Enabling activities

directly enable

activities are activities for which low-carbon alternatives are not

yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

investments with an

environmental

criteria for environmentally sustainable

Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Not applicable

What is the minimum share of socially sustainable investments?

Not applicable.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Green Bond legal identifier: 2138007NIV728258MK31

SUSTAINABLE INVESTMENT OBJECTIVE

	Does this financial product have a sustainable investment objective?						
	•• × Yes	• No					
	It will make a minimum of sustainable investments with an environmental objective: 80% in economic activities that	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments					
	qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy					
		with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective					
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments					

What is the sustainable investment objective of this financial product?

The sustainable investment objective of the BNP Paribas Green Bond fund is to allocate capital to new and existing projects with environmental benefits by investing in green bonds issued by corporate, supranational, sovereign agencies, local entities and/or governments to finance environmentally sound and sustainable projects that foster a net-zero emissions economy and protect the environment.

The eligible green projects categories include, but are not limited to:

- Renewable energy (including production, transmission, appliances and products);
- Energy efficiency (such as in new and refurbished buildings, energy storage, district heating, smart grids, appliances and products);
- Clean transportation (such as electric, hybrid, public, rail, non-motorized, multi-modal transportation, infrastructure for clean energy vehicles and reduction of harmful emissions);

- Climate change adaptation (including efforts to make infrastructure more resilient to impacts
 of climate change, as well as information support systems, such as climate observation and
 early warning systems);
- Green buildings that meet regional, national or internationally recognized standards or certifications for environmental performance.

The selected green bonds should comply with the principles formulated by the International Capital Market Association and receive a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

The sustainable investment objective of the financial product is environmental but mainly outside the scope of the environmental objectives defined by the EU Taxonomy.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy;
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology;
- The percentage of the financial product's portfolio invested in green bonds compliant with the principles formulated by the International Capital Market Association and having a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR;
- The percentage of the financial product's portfolio aggregate Revenue which is "EU Taxonomy Aligned" as defined by Regulation (EU) 2020/852.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

—— How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process; RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

<u>Social</u>

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

15. GHG intensity

16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, the product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the investment manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and the construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support all investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Policy, Engagement and Voting Policy and include the following:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues.
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

<u>Environment</u>

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Bloomberg MSCI Global Green Bond (Hedged in EUR) (RI) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in global green bonds supporting environmental projects, being issued by corporate, supranational sovereign agencies, local entities and/or governments issued in hard currencies (AUD, CAD, CHF, EUR, GBP, JPY, and USD). Investment grade structured debts may represent up to 20% of the assets.

After hedging, the Fund's exposure to currencies other than EUR may not exceed 5%.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT Sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights at each step of the investment process of the Fund.

The investment universe of this Fund is based on the Green Bond Principles ("GBP")* as formulated by the International Capital Market Association (more information on these principles are available in the following website: https://www.icmagroup.org/sustainable-finance/the-principles-guidelines-and-handbooks/green-bond-principles-gbp/). The Fund follows the Impact approach which means that the Fund invests with the intention to contribute to measurable positive social and/or environmental impact alongside financial returns.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the sustainable investment objective of this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;
 - More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents</u> BNPP AM Corporate English (bnpparibas-am.com);
- The financial product shall have at least 90% of its assets (excluding ancillary assets) covered by the ESG analysis based on the proprietary ESG methodology;

- The financial product shall invest in green bonds compliant with the principles formulated by the International Capital Market Association and having a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center;
- The financial product shall invest at least 80% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation and as disclosed in the asset allocation section below. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus;
- The financial product's shall invest at least 0.5% of its assets in companies "EU Taxonomy Aligned".

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance, include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance

What is the asset allocation and the minimum share of sustainable investments?

The minimum proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 80%.

practices include sound management structures, employee relations, remuneration of staff ad tax compliance.

Asset allocation describes the share of investments in specific assets.

How does the use of derivatives attain the sustainable investment objective?

Financial derivative instruments may be used for hedging and/or efficient portfolio management and/or investment purposes. Either these instruments are not used to attain the sustainable investment objective of the product, or they are aligned with the sustainable investment objective of the financial product

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The minimum share of investments in transitional and enabling activities in the meaning of the Taxonomy Regulation is 0% in transitional activities and 0% in enabling activities.

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels

corresponding to the

are
environmentally
sustainable
investments that
do not take into
account the
criteria for
environmentally
sustainable
economic activities
under the EU
Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

Not applicable.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective. No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: BNP PARIBAS FUNDS GREEN TIGERS legal identifier: 549300W93DAX2403V045

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

SUSTAINABLE INVESTMENT OBJECTIVE

Does this financial product have a sustainable investment objective?						
•• × Yes	• No					
It will make a minimum of sustainable investments with an environmental objective: 35%	It promotes Environmental/Social (E/S characteristics and while it does not ha as its objective a sustainable investment will have a minimum proportion of% of sustainable investments					
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy					
	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective					
	With a social objective					
It will make a minimum of sustainable investments with a social objective: 1%	It promotes E/S characteristics, but will not make any sustainable investments					

What is the sustainable investment objective of this financial product?

The sustainable investment objective of the BNP Paribas Green Tigers is to help or accelerate the transition into a sustainable world by focusing on challenges related to the environment in the Asia-Pacific region.

At all times, this sub-fund invests in equities and/or equity equivalent securities issued by companies based in Asia and/or in the Pacific Region that conduct a significant part of their business in environmental markets.

"Environmental markets" include, but are not limited to, Renewable & Alternative Energy, Energy Efficiency, Water Infrastructure & Technologies, Pollution Control, Waste Management & Technologies, Environmental Support Services, and Sustainable Food.

Sustainable investments underlying the financial product contribute to two of the environmental objectives set out in Article 9 of Regulation (EU) 2020/852, these are climate change mitigation and climate change adaptation

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product:

- The percentage of the financial product's portfolio invested in companies with at least a 20% of revenue, profit or invested capital aligned with the financial product's thematics;
- The percentage of the financial product's portfolio compliant with the BNP Paribas Asset Management Responsible Business Conduct Policy (RBC policy);
- The percentage of the financial product's assets covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology (excluding ancillary liquid assets);
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation;
- The percentage of the financial product's portfolio aggregate Revenue which is "EU Taxonomy Aligned" as defined by Regulation (EU) 2020/852.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

In order to ensure that the sustainable investments that the financial product intends to make do not cause significant harm to any environmental or social sustainable objective, the financial product assesses each investment against a set of indicators of adverse impacts by conducting proprietary Fundamental ESG analysis for all portfolio holdings. The ESG analysis aims to identify the quality of governance structures, the most material environmental and social harms for a company or issuer and assesses how well these harms are addressed and managed. The Investment Manager seeks robust policies, processes, management systems and incentives as well as adequate disclosure, as applicable. Additionally, the Investment Manager assesses any past controversies identified. A proprietary aggregate ESG score is then assigned for each company or issuer taking into account the indicators as set out below, based on a qualitative judgement. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the financial product's investable universe. The Investment Manager considers it important to engage with companies and issuers and to analyse company and issuer disclosures and reports. The ESG process is proprietary to the Investment Manager, although the Investment Manager uses external ESG-research as an input.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Indicators for adverse impacts on sustainability factors have been taken into account in the Investment Manager's Fundamental ESG analysis as follows – the data considered, as prescribed by SFDR, by the Investment Manager to assess the relevant indicator is set out in the first paragraph under each indicator below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Mandatory Indicators

GHG emissions, carbon footprint and GHG intensity of investee companies

Data considered: an investee company's absolute scope 1, 2 and 3 GHG emissions, and its enterprise value and revenue.

Companies are tiered between those providing full disclosure of Scopes 1, 2, 3 emissions across the majority of their operations; reporting across all four pillars prescribed by the Task Force on Climate related Financial Disclosures (TCFD); having set stretching short-medium term target (3+ years), as well as a Net zero/Paris Agreement aligned/Science-based long term target (10-30 years) and detailed actions plans versus those with no emission disclosure in place, no targets and no clear commitment to setting one.

Exposure to companies active in the fossil fuel sector

Data considered: an investee company's exposure to fossil fuel revenues.

The Investment Manager evaluates a company's transition to a low carbon economy by working towards ambitious science-based Paris-aligned decarbonisation targets and by strategically phasing out any fossil fuel exposure.

Share of non-renewable energy consumption and production, and energy consumption intensity per high impact climate sector

Data considered: an investee company's total energy consumption and production as well as the consumption and production from non-renewable energy sources, and an investee company's output metric as the basis of energy intensity.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks prescribed by the International Sustainability Standards Board (ISSB), the Global Reporting Initiative (GRI) and the CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Activities negatively affecting biodiversity-sensitive areas

Data considered an investee company's sites/operations located in or near to biodiversity-sensitive areas.

The Investment Manager uses external tools and research as well as its own proprietary analysis in assessing companies' management of nature-related harms. The Investment Manager seeks investment in companies or issuers that have addressed the harm with robust policies, processes, management systems and incentives that are scaled appropriately to the importance of the harm. Site-level geolocation data and regional exposure are not always easily available or disclosed by companies and issuers. The Investment Manager engages with companies to achieve geo-location data and to assess the potential harm at the specific locations of interest, for example highlighting habitats of IUCN Red List species (the International Union for Conservation of Nature), protected areas and key biodiversity areas in the vicinity.

Emissions to water, and hazardous waste and radioactive waste ratio

Data considered: an investee company's generated tonnes of emissions to water, and tonnes of hazardous waste and radioactive waste.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as

ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

Data considered: an investee company's involvement in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.

The Investment Manager screens the Sub-Fund's investments against adherence to global standards such as the UN Global Compact principles and OECD Guidelines for Multinational Enterprises. An external research provider is used to support this screening activity. A company found to be in breach of these international norms and standards is excluded from the investable universe and divested. Where a company is flagged for potential breaches, the Investment Manager will monitor and seek to engage, as appropriate.

Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

Data considered: instances where an investee company is lacking policies to monitor compliance with the UNGC Principles or OECD Guidelines.

The Investment Manager uses external tools and research to assertain the existence/non-existence of these policies and identify those companies that do not satisfy credible policy standards in all those areas that speak to UNGC principles or the OECD Guidelines.

Unadjusted gender pay gap

Data considered: an investee company's average gross hourly earnings of male paid employees and of female paid employees as a percentage of average gross hourly earnings of male paid employees.

Companies are assessed for their pay equity through review of the pay gap, were available, alongside a broader set of KPIs related to Equality, Diversity & Inclusion (ED&I). Companies are tiered between those demonstrating state of the art management processes and those with no ED&I disclosure.

Board gender diversity

Data considered: an investee company's number of women on the board of directors and percentage of board members that are female.

Companies are assessed for their board gender diversity alongside other key roles which influence company strategy alongside a broader set of metrics related to leadership diversity. Companies are tiered between those achieving 40%-60% women on the board and in executive management as well as demonstrating diversity in key roles and those with no women on the board or in executive management.

Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Data considered: an investee company's exposure to controversial weapons through business activity and ownership.

Companies are screened by business activity in an effort to ensure, using a combination of screen activity and the Investment Manager's qualitative judgement, that they are not involved in the activity of manufacturing or of manufacturing tailor-made components, using, repairing, putting up for sale, selling, distributing, importing or exporting, storing or transporting controversial or indiscriminate weapons such as anti-personnel mines, submunitions, inert ammunition and armour containing depleted uranium or any other industrial uranium, weapons containing white phosphorus, biological, chemical or nuclear weapons. The Investment Manager seeks to exclude all companies with any involvement in controversial weapons from investment and in addition

uses qualitative judgement as part of the analysis. If the Investment Manager determines that one of these activities takes place within a subsidiary, the direct parent company is also considered to be involved in controversial weapons if it holds a majority equity interest in the subsidiary. Likewise, if one of the above-mentioned activities is determined to take place within a parent company, any majority-owned subsidiary of this parent company is also deemed to be involved.

Voluntary Indicators

Investments in companies without carbon emission reduction initiatives

Data considered: instances where an investee company is lacking of all of the following: near-term GHG reduction target, long-term GHG reduction target (10+ years), science-based GHG reduction target, Net Zero commitment.

The Investment Manager actively seeks to engage with companies to encourage the implementation of effective performance management systems, with the objective to establish GHG emissions baseline data (scope 1, 2 and 3), set science-based long-term carbon emission reduction targets with a viable action plan to deliver on these targets, and regularly report.

Water usage and recycling

Data considered: an investee company's operational water use (cubic meters of water consumed), and water management (percentage of water recycled and reused).

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws

Data considered: an investee company's number of convictions per severity category in the past three to five years (three years for minor controversies or incidents; five years for more significant controversies or incidents).

The materiality and severity of convictions and fines for violation of anti-corruption and anti-bribery laws are reviewed as part of the Fundamental ESG analysis.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The Investment Manager uses a Global Standards Screening which assesses companies' impact on stakeholders and the extent to which a company causes, contributes or is linked to violations of international norms and standards. The underlying research provides assessments covering the OECD Guidelines for Multinational Enterprises and the UN's Global Compact Principles, as well as International Labour Organization's (ILO) Conventions, and the UN Guiding Principles on Business and Human Rights (UNGPs). A company found to be in breach of these international norms and standards is excluded from the investable universe and divested. Where a company is flagged for potential breaches, the Investment Manager will monitor and seek to engage, as appropriate.

Does this financial product consider principal adverse impacts on sustainability factors?

×

Yes, The Sub-Fund considers principal adverse impacts on sustainability factors by identifying, assessing, and managing negative effects of portfolio-related investment decisions on environmental, social and employee matters, respect for human rights, and anti-bribery & corruption matters.

The following illustrates how this exposure is intended to be managed, once identified and assessed, taking into account each of the mandatory and voluntary indicators listed above.

- 1. All companies and other issuers must meet financial and ESG criteria before entering the Sub-Fund's list of investable companies. When all the data is gathered, an ESG report is written and a proprietary aggregate ESG score assigned. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the investable universe. In cases where a company has a low ESG score, but is not deemed to cause significant harm and is not excluded, the company will have a capped position size in the portfolio, for risk management reasons. The Investment Manager does not seek to exclude a certain number or percentage of companies or issuers, but rather seeks an absolute level of ESG quality based on a qualitative judgement.
- 2. Bottom-up company-specific engagement: As part of the Investment Manager's ongoing, proprietary company and issuer-level ESG analysis, it identifies company and issuer-specific matters and risks and actively engages with companies and issuers about these matters. For the bottom-up, company specific engagements, the objective is typically to solve or improve the issue that has been identified as part of ESG analysis and when that objective has been achieved, move to the next objective or pause the engagement.

Top-down strategic engagement: Every year the Investment Manager assesses and outlines the engagement priorities for the next 12 months. These priorities are based on market developments and emerging sustainability issues that are considered relevant and material for companies and issuers. The Investment Manager then identifies the companies and issuers which it considers are most exposed to these topics and focuses its engagement on specific companies and issuers. For the strategic engagement areas, the Investment Manager sets up specific steps as objectives that it seeks to reach with the engagements. The strategic engagement areas have analysts assigned as leads for each of the areas of engagement.

3. Where the Investment Manager identifies unmanaged risk, and its usual management approach to engagement fails to produce positive outcomes, its Escalation Policy takes hold.

If the Investment Manager views the investee company or issuer is unresponsive to engagement or unwilling to consider alternative options posing less significant risks to shareholders, the Investment Manager will escalate the dialogue by:

- Seeking alternative or more senior contacts within the company or issuer
- Intervening or engaging together with other shareholders
- Intervening or engaging together with other institutions or organisations (multi-stakeholder)
- Highlighting the issue and/or joint engagements regarding the issue through institutional platforms and/or
- Filing or co-filing resolutions at General Meetings

If interventions are unsuccessful and the Investment Manager considers that the risk profile of the company has significantly deteriorated or company strategy/governance structures have altered because of an incident, to a degree where the return outlook and the company's

strategy and quality no longer meet expectations, the company would be excluded from the investable universe and/or sold.

Information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

NO

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This Fund is actively managed. The composite benchmark 20% MSCI Japan (NR) index + 80% MSCI AC Asia Pacific ex-Japan (NR) index is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the composite benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by companies that operate in environmental markets in Asia and/or Pacific region.

Environmental markets include, but are not limited to, Renewable & Alternative Energy, Energy Efficiency, Water Infrastructure & Technologies, Pollution Control, Waste Management & Technologies, Environmental Support Services, and Sustainable Food.

It may be invested in Mainland China shares restricted to foreign investors such as China A shares which can be listed on a Stock Connect or through a use of a specific license granted by the Chinese authorities.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund follows the Thematic approach which means that the Fund invests in companies that provide products and services providing concrete solutions to specific environmental and/or social challenges, seeking to benefit from future growth anticipated in these areas while contributing capital towards the transition towards a low-carbon, inclusive economy.

The approach is implemented in order to consistently eliminate at least 20% of the investment universe being companies conducting significant part of their business in Environmental Markets across the main markets of Asian countries

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain f the sustainable investment objective of this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>

• The financial product shall invest in companies with at least a 20% of revenues aligned with the financial product's thematics;

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology;
- The financial product shall invest at least 85% of its portfolio in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" and the quantitative and qualitative thresholds are indicated in the main part of the Prospectus.
- The financial product's shall invest at least 2% of its assets in companies "EU Taxonomy Aligned".

What is the policy to assess good governance practices of the investee companies?

Pre investment

The Investment Manager analyses companies' governance structures taking into account what constitutes common and best global practice for governance and identifying potential outliers. Once the governance and other ESG analytical data is gathered, an ESG report is produced and a proprietary ESG score is assigned as part of the Fundamental ESG analysis as described above.

Post investment

The Investment Manager's proxy voting is predominantly related to governance issues such as the election of directors, board structures and management remuneration. When practicable, the Investment Manager seeks to engage with the investee company before voting against management's recommendation on an AGM resolution. The Investment Manager is also in dialogue with companies throughout the year to discuss and comment on proposed governance structures.

What is the asset allocation and the minimum share of sustainable investments?

The minimum proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 85%.

How does the use of derivatives attain the sustainable investment objective?

Financial derivative instruments may be used for hedging and/or efficient portfolio management and/or investment purposes. Either these instruments are not used to attain the sustainable

Asset allocation

under the EU
Taxonomy.

investment objective of the product, or they are aligned with the sustainable investment objective of the financial product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, and climate change adaptation, are disclosed in the two graphs below.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*}For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The minimum share of investments in transitional and enabling activities in the meaning of the Taxonomy Regulation is 0% in transitional activities and 0% in enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?
Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

	Doe	es this financial product have a s	susta •	ninable investment objective? No
	It will make a minimum of sustainable investments with an environmental objective: —% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	×	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15% of sustainable investments	
			with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy	
			with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	
				with a social objective
		It will make a minimum of sustainable investments with a social objective:%		It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria, and by investing directly, or indirectly through funds, in bonds or shares of issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

When investing through passive funds and/or external funds, the investment manager relies on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The external fund analysis team within the investment manager is dedicated to select external funds using a proprietary methodology.

In addition to the usual selection criteria (quantitative analysis, qualitative analysis and risk due diligence), the team offers a ranking based on extra-financial (or ESG) criteria for each recommended manager or fund in each sector. The team applies a qualitative rather than

quantitative ESG rating to the funds and managers selected in order to assess the effective implementation of ESG practices and the inclusion of extra-financial criteria in their investment process.

The ESG rating system for the team is based on fundamental principles:

- Consistency of approach systematically applied across all asset classes and sectors to ensure consistency in rating
- A proprietary methodology applicable to all funds, with well-defined rules to limit any subjectivity
- An ESG rating for both the management company and the fund (the last including the ESG rating of its management company) The team also analyses a specific SRI (Socially Responsible Investment) selection based on complementary approaches (negative screening, best-in-class / best-effort, positive screening / impact investing)

As all external funds under selection, SRI funds must go through a selection process in three stages (quantitative analysis, qualitative analysis and risk due diligence). Therefore the ESG criteria applied to the investment process are assessed by examining in particular (non-exhaustive list):

- The extra-financial constraints applicable to the Fund's investment universe
- The use of quantitative and qualitative criteria and ESG research in the investment process
- Taking financial and extra-financial requirements into account in the construction of the portfolio
- Monitoring and compliance check with the constraints of socially responsible investment

When investing directly or through internal active funds, the investment manager relies on a proprietary ESG methodology and applies exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Policy (RBC Policy).

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

 The percentage of the direct investments and internal active funds compliant with the RBC Policy;

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology;
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to indirectly finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Sustainable Investment minimum commitment of the financial product is calculated on an asset under management (AuM) weighted methodology without any minimum required for any underlying funds. As such, a look-through approach is applied in order to calculate the financial product's sustainable investment minimum proportion based on the data reported by the underlying funds.

Any sustainable investment commitment reported by external active and/or passive funds, selected by the dedicated internal team, are assessed thanks to specific methodologies developed by third-party asset managers and/or index providers.

Any sustainable investment commitment reported by direct investments or through internal active and/or passive funds are assessed thanks to the proprietary sustainable investment methodology as described below.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets;
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements

More information on the internal methodology can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make, through investments into direct lines or internal active funds, should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset manager and index providers assessment and reporting to perform the DNSH analysis in accordance with the regulatory requirements.

-— How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product, through investments into direct lines or internal active funds, takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

Exclusion of issuers that are in violation of international norms and conventions and issuers
that are involved in activities presenting an unacceptable risk to society and/or the
environment;

- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

-—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product, through investments into direct lines or internal active funds, is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for alignment of sustainable investments with the above-mentioned international norms and conventions.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes,

The product considers some principal adverse impacts on sustainability factors. When investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

On the other hand, all its investments into direct lines or internal active funds systematically implement the sustainable investment pillars defined in the GSS into the financial product's investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The fund is actively managed without reference to an index. The Fund seeks to achieve medium-term capital gains in the Net Asset Value by implementing a flexible asset allocation strategy through UCITS and/or UCIs using shares, government and corporate bonds, structured debts, high-yield bonds, convertible bonds, cash instruments and money market instruments while maintaining the annualized volatility of the portfolio below 4%. The Fund may invest in derivatives for hedging and efficient portfolio management purposes.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT Sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria at each step of the investment process of the Fund. An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager. Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall invest directly or through internal funds in compliance with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>;

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology;
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus;
- The financial product shall invest at least 15% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

When investing through direct lines or internal active funds, the investment manager relies on its internal proprietary assessment of good governance practices of the investee companies performed by the BNP Paribas Asset Management's Sustainability Centre as described below.

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

However, when investing through external funds and/or passive funds, selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers to assess good governance practices of the investee companies.

What is the asset allocation planned for this financial product?

When investing through direct lines or internal active and/or passive funds, the investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

However, when investing through external active and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

Asset allocation describes the share of investments in specific assets.

Good governance

employee relations,

remuneration of staff and tax

practices include sound management

structures,

compliance.

The minimum proportion of sustainable investments of the financial product is 15%.

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management and/or hedging and/or investment purposes. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling

Not applicable.

activities?

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 6%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in funds exposed to taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in funds exposed to sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly

harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

BNP PARIBAS FUNDS HEALTH CARE Product name:

INNOVATORS

Legal Entity Identifier: 2138000X5JSJS4FMQT04

Environmental and/or social characteristics

Ooes this financial product have a sus	stainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse **impacts** are the

most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery

matters.

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The Fund is actively managed and as such may invest in securities that are not included in the index which is MSCI World Health Care 10/40 (NR). The Benchmark is used for performance comparison only. The Fund is not benchmark constrained and its performance may derivate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued worldwide by companies which innovate or benefit from healthcare innovation including but not limited to advances in genetic sequencing, drug delivery, miniaturization, bio-compatible materials, haptics and information technology in the healthcare field.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents -**BNPP** English Sustainability documents AM Corporate (https://www.bnpparibas-am.com/sustainability-documents/)

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 30% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 30%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B** Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Not applicable

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Not applicable

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 30%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

social objective, provided that the

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- o Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- o Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);

o Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy;
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology;
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation.
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets;
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: <u>Sustainability documents</u> - BNPP AM <u>Corporate English (bnpparibas-am.com)</u>.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- $5.\ Share\ of\ non-renewable\ energy\ consumption\ and\ production$
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

-—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×

Yes, the product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark MSCI World (NR) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in companies that foster inclusive practices and that transform their business models to deliver sustainable products and services. Inclusive growth themes include, but are not limited to, creating a safety net for the most fragile, investing in social mobility, access to primary goods, tackling corruption, rent seeking, lobbying, and decarbonisation & biodiversity.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund follows the Thematic approach which means that the Fund invests in companies that provide products and services providing concrete solutions to specific environmental and/or social challenges, seeking to benefit from future growth anticipated in these areas while contributing capital towards the transition towards a low-carbon, inclusive economy.

The approach is implemented in order to consistently eliminate at least 20% of the investment universe being the large and mid-cap companies across the main markets of developed countries prior to applying ESG filters.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager. Incomes are systematically reinvested.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.
 - More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents BNPP AM Corporate English (bnpparibas-am.com)</u>:
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology.
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus.
- The financial product shall invest at least 51% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product's investment universe is reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistle-blower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 51%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report

The minimum proportion of sustainable investments of the financial product is 51%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.
- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for hedging purposes. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 15%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website: $\underline{www.bnpparibas-am.com}$ after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS FUNDS INDIA EQUITY Legal Entity Identifier : 213800D4LDDHQV6FKY53

an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or

social objective and that the investee companies follow good governance practices.

Sustainable

investment means

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Does this financial product have a sus	stainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse **impacts** are the

most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives ${\it Social}$
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark MSCI India (USD) NR is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by Indian companies, or companies operating in this country.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus

objectives and risk

tolerance.

- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 5% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 45%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 5%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

Principal adverse **impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Topix (RI) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by Japanese companies, and/or companies operating in Japan.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents -Sustainability documents **BNPP** Corporate (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

the ESG analysis based on the ESG internal proprietary methodology

- The financial product shall invest at least 30% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 46%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 30%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards :

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B** Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not

yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?
 Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 8%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 10%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are

whether the

indexes to measure

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS FUNDS JAPAN SMALL CAP Legal Entity Identifier : 2138002KWXMBLNCJ1K71

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and

that the investee companies follow good governance practices.

Sustainable

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

	Does this financial product have a sustainable investment objective?	
	Yes	No X
	It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments
5	in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
L	in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
		x with a social objective
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

Principal adverse **impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Russell Nomura Small Caps (RI) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares of small Japanese companies, and/or small companies operating in Japan.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the investment manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the

strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

weighted average ESG score of its investment universe, as defined in the Prospectus

- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 32%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes,

notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Not applicable

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- What is the minimum share of investments in transitional and enabling activities?
 - Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 7%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse **impacts** are the

most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery

matters.

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives ${\it Social}$
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by Latin American companies, and/or companies operating in those countries.

It is actively managed and as such may invest in securities that are not included in the index which is MSCI EM Latin America 10/40 (NR). Due to the active approach of the investment manager, the performance objective of the sub-fund is to outperform the benchmark.

The investment philosophy is based in a long term bottom-up approach taking into consideration the financial structure of companies with superior earnings growth and sound profitability, quality of the management, sustainable growth and others. The selection approach is based on an assessment of critical factors such as valuation multiples, earnings growth and cash flow generation. Alongside, a top down overlay approach is used to identify companies operating in sectors/countries with strong long term macroeconomic fundamentals. Opportunities are sought everywhere in the Latin America investment universe, whether inside or outside of the index, with no particular constraints other than liquidity.

Nevertheless, when certain market's circumstances justify it in order to preserve the overall liquidity of the sub-fund, the asset manager will focus on the most tradable equities, the composition of the portfolio could get closer to that of the benchmark. Such circumstances are related to emerging markets inefficiencies, such as liquidity issues and severe FX devaluations during global instabilities, irrational speculative attacks towards emerging markets, and electoral periods in which prices are chiefly driven by political news-flow rather than fundamentals.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

• What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 31% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted

environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 31%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

- **#1** Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2** Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of: - turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy. operational **expenditure** (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Enabling activities directly enable make a substantial

other activities to contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not vet available and among others have greenhouse gas emission levels corresponding to the best

performance.

Not applicable

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 10%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics

promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The Fund is actively managed and as such may invest in securities that are not included in the index which is JPM EMBI Global Diversified (RI). The benchmark is used for performance comparison only. The Fund is not benchmark constrained and its performance may derivate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in bonds and other debt instruments issued by emerging countries or companies from or operating in emerging countries. In the management process, emphasis is put on local currencies fluctuations. Countries exposures are weighted according to a diversification process implemented by the Investment Management team.

The Fund may be invested into debt securities traded on the China Interbank Bond market.

It is actively managed and as such may invest in securities that are not included in the index JPM GBI-EM Global Diversified (RI) (the benchmark). Nevertheless, due to similar geographical and thematic constraints, investors should be aware that the Fund's risk and return profile may, from time to time, be comparable to the risk and return profile of the benchmark.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 1% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 39%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 1%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

the share of

Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Not applicable.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Multi-Asset Thematic

Legal entity identifyier: 213800UZ2D3L57GDQS87

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a s	sustainable investment objective? No
It will make a minimum of sustainable investments with an environmental objective: —% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

Sustainable investment means

an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable

investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria, and by investing directly, or indirectly through funds, in bonds or shares of issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

When investing through passive funds and/or external funds, the investment manager relies on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The external fund analysis team within the investment manager is dedicated to select external funds using a proprietary methodology.

In addition to the usual selection criteria (quantitative analysis, qualitative analysis and risk due diligence), the team offers a ranking based on extra-financial (or ESG) criteria for each recommended manager or fund in each sector. The team applies a qualitative rather than

quantitative ESG rating to the funds and managers selected in order to assess the effective implementation of ESG practices and the inclusion of extra-financial criteria in their investment process.

The ESG rating system for the team is based on fundamental principles:

- Consistency of approach systematically applied across all asset classes and sectors to ensure consistency in rating
- A proprietary methodology applicable to all funds, with well-defined rules to limit any subjectivity
- An ESG rating for both the management company and the fund (the last including the ESG rating of its management company) The team also analyses a specific SRI (Socially Responsible Investment) selection based on complementary approaches (negative screening, best-in-class / best-effort, positive screening / impact investing)

As all external funds under selection, SRI funds must go through a selection process in three stages (quantitative analysis, qualitative analysis and risk due diligence). Therefore the ESG criteria applied to the investment process are assessed by examining in particular (non-exhaustive list):

- The extra-financial constraints applicable to the Fund's investment universe
- The use of quantitative and qualitative criteria and ESG research in the investment process
- Taking financial and extra-financial requirements into account in the construction of the portfolio
- Monitoring and compliance check with the constraints of socially responsible investment

When investing directly or through internal active funds, the investment manager relies on a proprietary ESG methodology and applies exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Policy (RBC Policy).

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

 The percentage of the direct investments and internal active funds compliant with the RBC Policy;

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology;
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation;
- The percentage of the financial product's portfolio invested in investments aligned with the EU Taxonomy.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to indirectly finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Sustainable Investment minimum commitment of the financial product is calculated on an asset under management (AuM) weighted methodology without any minimum required for any underlying funds. As such, a look-through approach is applied in order to calculate the financial product's sustainable investment minimum proportion based on the data reported by the underlying funds.

Any sustainable investment commitment reported by external active and/or passive funds, selected by the dedicated internal team, are assessed thanks to specific methodologies developed by third-party asset managers and/or index providers.

Any sustainable investment commitment reported by direct investments or through internal active and/or passive funds are assessed thanks to the proprietary sustainable investment methodology as described below.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets;
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements

More information on the internal methodology can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make, through investments into direct lines or internal active funds, should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset manager and index providers assessment and reporting to perform the DNSH analysis in accordance with the regulatory requirements.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product, through investments into direct lines or internal active funds, takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

-—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product, through investments into direct lines or internal active funds, is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for alignment of sustainable investments with the above-mentioned international norms and conventions.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes,

The product considers some principal adverse impacts on sustainability factors. When investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

On the other hand, all its investments into direct lines or internal active funds systematically implement the sustainable investment pillars defined in the GSS into the financial product's investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The fund is actively managed without reference to an index. The Fund seeks to achieve medium-term capital gains in the Net Asset Value by implementing a flexible asset allocation strategy through UCITS and/or UCIs using shares, government and corporate bonds, structured debts, commodities, listed real estate assets, cash instruments and money market instruments. This sub-fund aim at focusing on trends resulting from structural shifts in social and economic factors such as demography, environment, regulation or technology in order to express thematic investment views. Identification of securities with significant exposure to thematic investments are at the center of the investment process. The weighting to the individual thematic investments in the portfolio may vary over time according to the evolution of market conditions and to reflect the anticipations of the Investment Manager. Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall invest directly or through internal funds in compliance with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>;

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology;
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus;
- The financial product shall invest at least 35% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus;
- The financial product shall invest at least 2% of its assets in investments aligned with the EU Taxonomy.

objectives and risk

tolerance.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

When investing through direct lines or internal active funds, the investment manager relies on its internal proprietary assessment of good governance practices of the investee companies performed by the BNP Paribas Asset Management's Sustainability Centre as described below.

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

However, when investing through external funds and/or passive funds, selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers to assess good governance practices of the investee companies.

What is the asset allocation planned for this financial product?

When investing through direct lines or internal active and/or passive funds, the investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

However, when investing through external active and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

Asset allocation describes the share of investments in specific assets.

Good governance

employee relations,

remuneration of staff and tax

practices include sound management

structures,

compliance.

The minimum proportion of sustainable investments of the financial product is 35%.

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#20ther** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management and/or hedging and/or investment purposes. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and Taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The minimum share of investments in transitional and enabling activities in the meaning of the Taxonomy Regulationc is 0% in transitional activities and 0% in enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 12%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in funds exposed to taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in funds exposed to sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 11%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS FUNDS NORDIC SMALL CAP Legal Entity Identifier : 2138006KPZV6BCZDL636

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective? Yes No It will make a minimum of It promotes Environmental/Social (E/S) sustainable investments with characteristics and while it does not have an environmental objective: as its objective a sustainable investment, _% it will have a minimum proportion of 25.00% of sustainable investments in economic activities that with an environmental objective in economic qualify as environmentally activities that qualify as environmentally sustainable under the EU sustainable under the EU Taxonomy Taxonomy with an environmental objective in in economic activities that do economic activities that do not qualify as not qualify as environmentally environmentally sustainable under the EU sustainable under the EU Taxonomy Taxonomy with a social objective Х It will make a minimum of It promotes E/S characteristics, but will sustainable investments with a not make any sustainable investments social objective: ____%

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the

investment does

not significantly harm any

environmental or social objective and

that the investee

companies follow

good governance practices.

The EU Taxonomy is a classification

system, establishing

environmentally

economic activities.

For the time being,

it does not include a

a list of

sustainable

list of socially

sustainable economic activities.

Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse **impacts** are the

most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery

matters.

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

This Fund is actively managed. The benchmark Carnegie Small Cap Nordic (EUR) RI is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares of Nordic small companies or small companies operating in the Nordic countries: Denmark, Finland, Iceland, Norway and Sweden.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 25% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 48%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 25%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B** Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a

- **turnover** reflecting the share of revenue from green activities of investee companies.

share of:

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

indexes to measure

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

investment means an investment in an economic activity

an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Sustainable

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

It will make a minimum of sustainable investments with a social objective:	It promotes E/S characteristics, but will not make any sustainable investments
	· ·

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The Bloomberg China Treasury + Policy Bank (USD) (hedged in USD) RI index is used for performance comparison only.

The Fund is not benchmark constrained and its performance may deviate significantly from that of the composite benchmark.

The Fund seeks to increase the value of its assets over the medium term by mainly investing in Chinese sovereign bonds (including policy bank bonds) and investment grade credit bonds issued or settled in RMB (both CNH and CNY), including but not limited to securities traded over the counter on the China interbank bond market and/or China exchange traded bond market on the Shanghai or Shenzhen stock exchanges, and in overnight deposits, Investment grade structured debts may represent up to 20% of the assets. Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the investment manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents -

Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 10% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 10%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 10%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score

Asset allocation
describes the share
of investments in
specific assets.
Taxonomy-aligned
activities are
expressed as a

- turnover reflecting the share of revenue from green activities of investee companies.

share of:

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental

objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are

whether the

attains the environmental or

social

indexes to measure

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

system, establishing

environmentally

economic activities.

For the time being,

it does not include a

a list of

sustainable

list of socially

sustainable economic activities.

Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse **impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The financial product does not intend to make any sustainable investment.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The financial product does not intend to make any sustainable investment.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Not applicable

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Not applicable

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

Χ

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark MSCI Russia 10/40 (NR) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by Russian companies, or companies operating in this country.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
 - The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors

objectives and risk

tolerance.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 0%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 0%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Asset allocation

describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

M

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- What is the minimum share of investments in transitional and enabling activities? Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU

Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Not applicable

What is the minimum share of socially sustainable investments?

Not applicable.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Seasons

Sustainable investment means

an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Legal entity identifyier: 213800NAF4CIGP4Q7Q29

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a s	
It will make a minimum of sustainable investments with an environmental objective: —% in economic activities that qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product, through its investments in "risky asset", promotes environmental and social characteristics by assessing options underlying investments against Environmental, Social, and Governance (ESG) criteria. As such, the product is partially exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

Such issuers' selection is done through:

- o A negative screening applying
 - exclusion of issuers that violate or are at risk of violating commonly accepted international norms and standards, enshrined in the United Nations Global Compact (UNGC) Principles, the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights (UNGPs), and their underlying conventions;

- exclusion of companies involved in Controversial Weapons, Military Contracting, Tobacco and Thermal Coal.
- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer and selection of the ones with the highest ESG score

Furthermore, the investment manager, through its investments into "low risk asset", promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The EuroStoxx 50 ESG Index is the options' underlying and has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The minimum percentage of the "risky asset" which is exposed to the reference benchmark
- The percentage of the financial product's reference benchmark portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies;
- The minimum percentage of the financial product's reference benchmark investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The financial product does not intend to make any sustainable investment.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The financial product does not intend to make any sustainable investment

-— How have the indicators for adverse impacts on sustainability factors been taken into account?

Not Applicable.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Not Applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, the product considers principal adverse impacts on sustainability factors.

The «low risk asset» consists in an investment in a portfolio of equity securities which systematically implement the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for

human rights, anti-

corruption and antibribery matters.

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, and depending on the underlying assets, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

<u>Social</u>

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

Regarding the "risk asset", to determine which PAI is considered and addressed or mitigated, the investment manager uses ESG methodology and disclosures of the reference benchmark.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

- 1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;
- 2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;
- 3- Engagement and voting policy, when applicable

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

The Product is actively managed without reference to an index.

Nο

The Product's investment objective is first to increase the value of its assets over the medium term through participation in the performance of the Eurozone equity markets and, second, to minimize the risk of a decrease in the Product's net asset value.

The Product will be managed under portfolio insurance techniques that aim to adjust a «low risk asset» and a «risky asset» exposure, taking into consideration capital protection constraints and market anticipations from the portfolio manager.

The Product is first invested into «low risk asset» to support the NAV protection level defined as the Guaranteed NAV described below. It consists in an investment in a portfolio of equity securities (at least 75% of the assets of the Product) the performance of which is swapped against a monetary rate performance through the use of TRS, in UCITS (including UCITS ETF hedged against their reference benchmark) or UCIs and in money market and short term instruments denominated in Euro with a maturity no longer than 18 months (up to 25% of the assets of the Product).

The part of the portfolio available once the NAV protection parameters have been taken into account is invested into «risky asset» to support the performance. It provides exposure to the Eurozone equity markets through a dynamic call options and /or future trading strategy and through UCITS/UCIs. At least, 75% of the assets of the Product will be invested at all times in equities issued by companies that have their registered office in a member country of the European Economic Area, other than non-cooperative countries in the fight against fraud and tax evasion.

In addition, BNP Paribas («the Guarantor») commits towards the Company to, for this Product and for each quarter (each season), that the NAV of a share class is at least equal to 80% of the NAV (excluding dividends, the case being) of that same share class (the «Guaranteed NAV») observed 12 months ago which qualifies as an observation date (the «Observation Date»), provided that the share class is effectively launched 12 months ago at this Observation Date or before.» With regards to the guarantee, each 3rd Friday of March (Spring), June (Summer), September (Autumn) and December (Winter) is named an Observation Date. The first Observation Date was the 15 December 2017 (Winter 2017). If one of these dates is not a bank business day in Luxembourg, and/or an open day on the Eurex options market, the corresponding Observation date will be the preceding open day on Eurex which is also a bank business day in Luxembourg.

Shareholder can find all the necessary information on protection level and relevant Observation Dates on the management company website: www.bnpparibas-am.com. The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Product. Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making. An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager. Incomes are systematically reinvested.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
- The minimum percentage of the "risky asset" which is exposed to the reference benchmark represents at least 50%
- The financial product reference benchmark portfolio shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;
- The financial product's reference benchmark investment universe shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product's reference benchmark portfolio of the investment strategy shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

What is the policy to assess good governance practices of the investee companies?

The reference benchmark ESG scoring framework assesses corporate governance such as sound management structures, employee relations, remuneration of staff and tax compliance through a core set of standard key performance indicators that look especially at board, pay, ownership and control, and accounting practices.

Further information on the reference benchmark, its composition, calculation and rules for periodical review and rebalancing and on the general methodology can be found on: ESG Indices - Oontigo.

What is the asset allocation planned for this financial product?

The financial product is invested in "risky asset" through options instruments. Consequently, the asset allocation planned for this financial product, as well as any minimum proportion described below, are the ones of the derivative instruments such as listed options used on a continuous basis for achieving the investment policy.

The investments used to meet the environmental or social characteristics promoted by the financial product taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

Given the variable exposure to the "risky asset" in relation to the protection mechanism and the market conditions, the proportion of such investments used to meet the environmental or social characteristics promoted by the financial product will be between 0% and the maximum allocation to the "risky asset" enabled by the investment strategy. Within the reference benchmark itself, the minimum proportion of investments used to meet the environmental or social characteristics is expected to be higher than 50%. The exact percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 0%.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments such as options are used on a continuous basis for achieving the investment policy which promotes environmental or social characteristics. Moreover the securities physically held by the financial product, performance of which is swapped, respect minimum extrafinancial safeguards.

Other derivative instruments may also be used for efficient portfolio management and hedging purposes. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

The minimum share of investments in transitional and enabling activities in the meaning of the Taxonomy Regulation is 0% in transitional activities and 0% in enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Not applicable.

What is the minimum share of socially sustainable investments?

Not applicable.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm an EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks; and
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The EuroStoxx 50 ESG Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

The environmental or social characteristics promoted by the financial product are directly linked to the ones of the reference benchmark as the "risky asset" part of the financial product is partially invested via the use of the reference benchmark.

The reference benchmark is rule-based and therefore continuously apply its methodology, including environmental or social characteristics.

However, there is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two strategy reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the reference benchmark administrator rules.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The alignment of the investment strategy with the methodology of the index is intrinsic to the investment objective of the financial product which is to get partially exposed to the performance of the options implemented via the use of the reference benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the designated index differ from a relevant broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

Where can the methodology used for the calculation of the designated index be found?

The methodology used for the calculation of the reference benchmark can be found at: **ESG Indices - Qontigo**

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: BNP PARIBAS Funds SMaRT FOOD

legal identifier: 213800YTNPCDGU4KGD79

SUSTAINABLE INVESTMENT OBJECTIVE

Does this financial product have a sustainable investment objective? Yes No It will make a minimum of It promotes Environmental/Social (E/S) characteristics and while it does not have sustainable investments with as its objective a sustainable investment, it an environmental objective: will have a minimum proportion of ___% of 35% sustainable investments in economic activities that with an environmental objective in qualify as environmentally economic activities that qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy in economic activities that do with an environmental objective in not qualify as economic activities that do not qualify as environmentally sustainable environmentally sustainable under the under the EU Taxonomy EU Taxonomy with a social objective It will make a minimum of It promotes E/S characteristics, but will not make any sustainable investments sustainable investments with a social objective: 1%

Sustainable investment means an investment in an

and that the investee

What is the sustainable investment objective of this financial product?

The sustainable investment objective of the BNP Paribas SMaRT Food is to help or accelerate the transition into a sustainable world by focusing on challenges related to the food value chain and nutrition.

At all times, this sub-fund invests in equities and/or equity equivalent securities issued by companies that conduct a significant proportion of their business in the food supply chain and related or connected sectors with sustainable activities and processes.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product:

- The percentage of the financial product's portfolio invested in companies with at least a 20% of revenue, profit or invested capital aligned with the financial product's thematics;
- The percentage of the financial product's portfolio compliant with the BNP Paribas Asset Management Responsible Business Conduct Policy (RBC Policy);
- The percentage of the financial product's assets covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology (excluding ancillary liquid assets);
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

In order to ensure that the sustainable investments that the financial product intends to make do not cause significant harm to any environmental or social sustainable objective, the financial product assesses each investment against a set of indicators of adverse impacts by conducting proprietary Fundamental ESG analysis for all portfolio holdings. The ESG analysis aims to identify the quality of governance structures, the most material environmental and social harms for a company or issuer and assesses how well these harms are addressed and managed. The Investment Manager seeks robust policies, processes, management systems and incentives as well as adequate disclosure, as applicable. Additionally, the Investment Manager assesses any past controversies identified. A proprietary aggregate ESG score is then assigned for each company or issuer taking into account the indicators as set out below, based on a qualitative judgement. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the financial product's investable universe. The Investment Manager considers it important to engage with companies and issuers and to analyse company and issuer disclosures and reports. The ESG process is proprietary to the Investment Manager, although the Investment Manager uses external ESG-research as an input.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Indicators for adverse impacts on sustainability factors have been taken into account in the Investment Manager's Fundamental ESG analysis as follows – the data considered, as prescribed by SFDR, by the Investment Manager to assess the relevant indicator is set out in the first paragraph under each indicator below:

Mandatory Indicators

GHG emissions, carbon footprint and GHG intensity of investee companies

Data considered: an investee company's absolute scope 1, 2 and 3 GHG emissions, and its enterprise value and revenue.

Companies are tiered between those providing full disclosure of Scopes 1, 2, 3 emissions across the majority of their operations; reporting across all four pillars prescribed by the Task Force on Climate related Financial Disclosures (TCFD); having set stretching short-medium term target (3+ years), as well as a Net zero/Paris Agreement aligned/Science-based long term target (10-30)

years) and detailed actions plans versus those with no emission disclosure in place, no targets and no clear commitment to setting one.

Exposure to companies active in the fossil fuel sector

Data considered: an investee company's exposure to fossil fuel revenues.

The Investment Manager evaluates a company's transition to a low carbon economy by working towards ambitious science-based Paris-aligned decarbonisation targets and by strategically phasing out any fossil fuel exposure.

Share of non-renewable energy consumption and production, and energy consumption intensity per high impact climate sector

Data considered: an investee company's total energy consumption and production as well as the consumption and production from non-renewable energy sources, and an investee company's output metric as the basis of energy intensity.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks prescribed by the International Sustainability Standards Board (ISSB), the Global Reporting Initiative (GRI) and the CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Activities negatively affecting biodiversity-sensitive areas

Data considered an investee company's sites/operations located in or near to biodiversity-sensitive areas.

The Investment Manager uses external tools and research as well as its own proprietary analysis in assessing companies' management of nature-related harms. The Investment Manager seeks investment in companies or issuers that have addressed the harm with robust policies, processes, management systems and incentives that are scaled appropriately to the importance of the harm. Site-level geolocation data and regional exposure are not always easily available or disclosed by companies and issuers. The Investment Manager engages with companies to achieve geo-location data and to assess the potential harm at the specific locations of interest, for example highlighting habitats of IUCN Red List species (the International Union for Conservation of Nature), protected areas and key biodiversity areas in the vicinity.

Emissions to water, and hazardous waste and radioactive waste ratio

Data considered: an investee company's generated tonnes of emissions to water, and tonnes of hazardous waste and radioactive waste.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

Data considered: an investee company's involvement in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.

The Investment Manager screens the Sub-Fund's investments against adherence to global standards such as the UN Global Compact principles and OECD Guidelines for Multinational Enterprises. An external research provider is used to support this screening activity. A company

found to be in breach of these international norms and standards is excluded from the investable universe and divested. Where a company is flagged for potential breaches, the Investment Manager will monitor and seek to engage, as appropriate.

Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

Data considered: instances where an investee company is lacking policies to monitor compliance with the UNGC Principles or OECD Guidelines.

The Investment Manager uses external tools and research to assertain the existence/non-existence of these policies and identify those companies that do not satisfy credible policy standards in all those areas that speak to UNGC principles or the OECD Guidelines.

Unadjusted gender pay gap

Data considered: an investee company's average gross hourly earnings of male paid employees and of female paid employees as a percentage of average gross hourly earnings of male paid employees.

Companies are assessed for their pay equity through review of the pay gap, were available, alongside a broader set of KPIs related to Equality, Diversity & Inclusion (ED&I). Companies are tiered between those demonstrating state of the art management processes and those with no ED&I disclosure.

Board gender diversity

Data considered: an investee company's number of women on the board of directors and percentage of board members that are female.

Companies are assessed for their board gender diversity alongside other key roles which influence company strategy alongside a broader set of metrics related to leadership diversity. Companies are tiered between those achieving 40%-60% women on the board and in executive management as well as demonstrating diversity in key roles and those with no women on the board or in executive management.

Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Data considered: an investee company's exposure to controversial weapons through business activity and ownership.

Companies are screened by business activity in an effort to ensure, using a combination of screen activity and the Investment Manager's qualitative judgement, that they are not involved in the activity of manufacturing or of manufacturing tailor-made components, using, repairing, putting up for sale, selling, distributing, importing or exporting, storing or transporting controversial or indiscriminate weapons such as anti-personnel mines, submunitions, inert ammunition and armour containing depleted uranium or any other industrial uranium, weapons containing white phosphorus, biological, chemical or nuclear weapons. The Investment Manager seeks to exclude all companies with any involvement in controversial weapons from investment and in addition uses qualitative judgement as part of the analysis. If the Investment Manager determines that one of these activities takes place within a subsidiary, the direct parent company is also considered to be involved in controversial weapons if it holds a majority equity interest in the subsidiary. Likewise, if one of the above-mentioned activities is determined to take place within a parent company, any majority-owned subsidiary of this parent company is also deemed to be involved.

Voluntary Indicators

Investments in companies without carbon emission reduction initiatives

Data considered: instances where an investee company is lacking of all of the following: near-term GHG reduction target, long-term GHG reduction target (10+ years), science-based GHG reduction target, Net Zero commitment.

The Investment Manager actively seeks to engage with companies to encourage the implementation of effective performance management systems, with the objective to establish GHG emissions baseline data (scope 1, 2 and 3), set science-based long-term carbon emission reduction targets with a viable action plan to deliver on these targets, and regularly report.

Water usage and recycling

Data considered: an investee company's operational water use (cubic meters of water consumed), and water management (percentage of water recycled and reused).

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws

Data considered: an investee company's number of convictions per severity category in the past three to five years (three years for minor controversies or incidents; five years for more significant controversies or incidents).

The materiality and severity of convictions and fines for violation of anti-corruption and anti-bribery laws are reviewed as part of the Fundamental ESG analysis.

— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The Investment Manager uses a Global Standards Screening which assesses companies' impact on stakeholders and the extent to which a company causes, contributes or is linked to violations of international norms and standards. The underlying research provides assessments covering the OECD Guidelines for Multinational Enterprises and the UN's Global Compact Principles, as well as International Labour Organization's (ILO) Conventions, and the UN Guiding Principles on Business and Human Rights (UNGPs). A company found to be in breach of these international norms and standards is excluded from the investable universe and divested. Where a company is flagged for potential breaches, the Investment Manager will monitor and seek to engage, as appropriate.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, The Sub-Fund considers principal adverse impacts on sustainability factors by identifying, assessing, and managing negative effects of portfolio-related investment decisions on environmental, social and employee matters, respect for human rights, and anti-bribery & corruption matters.

The following illustrates how this exposure is intended to be managed, once identified and assessed, taking into account each of the mandatory and voluntary indicators listed above.

- 1. All companies and other issuers must meet financial and ESG criteria before entering the Sub-Fund's list of investable companies. When all the data is gathered, an ESG report is written and a proprietary aggregate ESG score assigned. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the investable universe. In cases where a company has a low ESG score, but is not deemed to cause significant harm and is not excluded, the company will have a capped position size in the portfolio, for risk management reasons. The Investment Manager does not seek to exclude a certain number or percentage of companies or issuers, but rather seeks an absolute level of ESG quality based on a qualitative judgement.
- 2. Bottom-up company-specific engagement: As part of the Investment Manager's ongoing, proprietary company and issuer-level ESG analysis, it identifies company and issuer-specific matters and risks and actively engages with companies and issuers about these matters. For the bottom-up, company specific engagements, the objective is typically to solve or improve the issue that has been identified as part of ESG analysis and when that objective has been achieved, move to the next objective or pause the engagement.

Top-down strategic engagement: Every year the Investment Manager assesses and outlines the engagement priorities for the next 12 months. These priorities are based on market developments and emerging sustainability issues that are considered relevant and material for companies and issuers. The Investment Manager then identifies the companies and issuers which it considers are most exposed to these topics and focuses its engagement on specific companies and issuers. For the strategic engagement areas, the Investment Manager sets up specific steps as objectives that it seeks to reach with the engagements. The strategic engagement areas have analysts assigned as leads for each of the areas of engagement.

3. Where the Investment Manager identifies unmanaged risk, and its usual management approach to engagement fails to produce positive outcomes, its Escalation Policy takes hold.

If the Investment Manager views the investee company or issuer is unresponsive to engagement or unwilling to consider alternative options posing less significant risks to shareholders, the Investment Manager will escalate the dialogue by:

- Seeking alternative or more senior contacts within the company or issuer
- Intervening or engaging together with other shareholders
- Intervening or engaging together with other institutions or organisations (multistakeholder)
- Highlighting the issue and/or joint engagements regarding the issue through institutional platforms and/or
- Filing or co-filing resolutions at General Meetings

If interventions are unsuccessful and the Investment Manager considers that the risk profile of the company has significantly deteriorated or company strategy/governance structures have altered because of an incident, to a degree where the return outlook and the company's strategy and quality no longer meet expectations, the company would be excluded from the investable universe and/or sold.

Information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark MSCI AC World (EUR) NR is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by companies which conduct their business in the sustainable food supply chain and that are delivering solutions to environmental and nutritional challenges.

It may be invested in Mainland China shares restricted to foreign investors such as China A shares which can be listed on a Stock Connect or through a use of a specific license granted by the Chinese authorities.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund follows the Thematic approach which means that the Fund invests in companies that provide products and services providing concrete solutions to specific environmental and/or social challenges, seeking to benefit from future growth anticipated in these areas while contributing capital towards the transition towards a low-carbon, inclusive economy.

The approach is implemented in order to consistently eliminate at least 20% of the investment universe being companies belonging to the food supply chain.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the sustainable investment objective of this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>.

- The financial product shall invest in companies with at least a 20% of revenues aligned with the financial product's thematics;
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology;
- The financial product shall invest at least 85% of its portfolio in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" and the quantitative and qualitative thresholds are indicated in the main part of the Prospectus.

Good governance practices include sound management structures, employee relations, remuneration of staff ad tax compliance.

What is the policy to assess good governance practices of the investee companies?

Pre investment

The Investment Manager analyses companies' governance structures taking into account what constitutes common and best global practice for governance and identifying potential outliers. Once the governance and other ESG analytical data is gathered, an ESG report is produced and a proprietary ESG score is assigned as part of the Fundamental ESG analysis as described above.

Post investment

The Investment Manager's proxy voting is predominantly related to governance issues such as the election of directors, board structures and management remuneration. When practicable, the Investment Manager seeks to engage with the investee company before voting against management's recommendation on an AGM resolution. The Investment Manager is also in dialogue with companies throughout the year to discuss and comment on proposed governance structures.

What is the asset allocation and the minimum share of sustainable investments?

The minimum proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 85%.

Asset allocation describes the share of investments in

Taxonomy-aligned activities are expressed as a share of:

specific assets.

How does the use of derivatives attain the sustainable investment objective?

Financial derivative instruments may be used for hedging and/or efficient portfolio management and/or investment purposes. Either these instruments are not used to attain the sustainable investment objective of the product, or they are aligned with the sustainable investment objective of the financial product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

^{*}For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 35%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Regulation (EU)

2020/852,

What is the sustainable investment objective of this financial product? The sustainable investment objective of the BNP Paribas Social Bond fund is to allocate capital to new and existing projects with positive social outcomes or a combination of both social and environmental benefits by investing in:

1) Social bonds issued by corporate, supranational, sovereign agencies, local entities and/or governments to finance socially sound and sustainable projects that achieve greater social benefits.

The eligible social project categories include, but are not limited to, providing and/or promoting:

 Affordable basic infrastructure (e.g. clean drinking water, sewers, sanitation, transport, energy);

indicators measure how the sustainable objectives of this financial product are attained.

Sustainability

- Access to essential services (e.g. health, education and vocational training, healthcare, financing and financial services);
- Affordable housing;
- Employment generation, and programs designed to prevent and/or alleviate unemployment stemming from socioeconomic crises;
- Food security and sustainable food systems (e.g. physical, social, and economic access to safe, nutritious, and sufficient food that meets dietary needs and requirements; resilient agricultural practices; reduction of food loss and waste; and improved productivity of small-scale producers).
- 2) Sustainability bonds issued by corporate, supranational sovereign agencies, local entities and/or governments to finance a combination of both green and social projects.

Examples of the eligible social project categories are mentioned above. The eligible green project categories include, but are not limited to:

- Renewable energy (including production, transmission, appliances and products);
- Energy efficiency (such as in new and refurbished buildings, energy storage, district heating, smart grids, appliances and products);
- Clean transportation (such as electric, hybrid, public, rail, non-motorized, multi-modal transportation, infrastructure for clean energy vehicles and reduction of harmful emissions);
- Climate change adaptation (including efforts to make infrastructure more resilient to impacts
 of climate change, as well as information support systems, such as climate observation and
 early warning systems);
- Green buildings that meet regional, national or internationally recognized standards or certifications for environmental performance.

The selected social and sustainability bonds should comply with the principles formulated by the International Capital Market Association and receive a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

The sustainable investment objective of the financial product is social and therefore outside the scope of the environmental objectives defined by the EU Taxonomy.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy;
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology;
- The percentage of the financial product's portfolio invested in green bonds compliant with the principles formulated by the International Capital Market Association and having a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and anti-

bribery matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process; RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production

- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

 ${\it 4. Investments in companies without carbon emission reduction initiatives}\\$

<u>Social</u>

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, the product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the investment manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and the construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support all investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Policy, Engagement and Voting Policy and include the following:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues.
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the coomposition of the financial product's portfolio (i.e. type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

Nο

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Bloomberg Global Treasury Euro Hedged 3-7 years is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund aims at investing in bonds issued by entities supporting projects with positive social and sustainability outcomes.

The Fund invests in Social Bonds and Sustainability Bonds, which are in line with the internal methodology developed by our Sustainability Centre.

After hedging, the Fund's exposure to currencies other than EUR may not exceed 5%.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT Sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria in the investments of the Fund. The Fund invests at least 90% of its assets (excluding investments in cash and cash equivalents) in securities issued by issuers that have an ESG score assessed using the internal methodology.

The elements of the investment strategy to attain the sustainable investment objective of this financial product as described below are systematically integrated throughout the investment process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;
 - More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the wensite of the investment manager: Sustainability documents BNPP AM Corporate English (bnpparibas-am.com);
- The financial product shall have at least 90% of its assets (excluding ancillary assets) covered by the ESG analysis based on the proprietary ESG methodology;
- The financial product shall invest in green bonds compliant with the principles formulated by the International Capital Market Association and having a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center;
- The financial product shall invest at least 80% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance, include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation and the minimum share of sustainable investments?

The minimum proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 80%.

How does the use of derivatives attain the sustainable investment objective?

Financial derivative instruments may be used for hedging and/or efficient portfolio management and/or investment purposes. Either these instruments are not used to attain the sustainable investment objective of the product, or they are aligned with the sustainable investment objective of the financial product.

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure
 (OpEx) reflecting
 green operational
 activities of
 investee
 companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

are
environmentally
sustainable
investments that
do not take into
account the
criteria for
environmentally
sustainable
economic
activities under
the EU Taxonomy.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Not applicable

What is the minimum share of sustainable investments with a social objective?

The minimum share of socially sustainable investments within the financial product is 80%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Sustainable Asian Cities Bond legal identifier: 213800BBDQKK3SP43W25

SUSTAINABLE INVESTMENT OBJECTIVE

Does this financial product have a sustainable investment objective? No It will make a minimum of It promotes Environmental/Social (E/S) characteristics and while it does not have sustainable investments with as its objective a sustainable investment, it an environmental objective: will have a minimum proportion of ___% of 60% sustainable investments in economic activities that with an environmental objective in qualify as environmentally economic activities that qualify as sustainable under the EU environmentally sustainable under the EU Taxonomy Taxonomy in economic activities that do with an environmental objective in not qualify as economic activities that do not qualify as environmentally sustainable environmentally sustainable under the under the EU Taxonomy **EU Taxonomy** with a social objective It will make a minimum of It promotes E/S characteristics, but will not make any sustainable investments sustainable investments with a social objective: 1%

Sustainable **investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities.

investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable

What is the sustainable investment objective of this financial product?

The sustainable investment objective of the BNP Paribas Sustainable Asian Cities Bond fund is to invest in the fixed income securities issued by entities (both private and public) determined, based on a proprietary methodology, to have relevant contributions in making urban centres in Asia more sustainable.

The concept of Sustainable Asian Cities is multi-sector and multi-aspect, with a major focus on five sustainable development areas:

- Enhancing urban mobility within and across cities, with a preference for low-carbon options e.g. public transport;
- Improving Asian cities' basic infrastructure to operate and thrive, as well as improving cities' resilience to extreme weather events such as, but not limited to, storm water management or flood protection;

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- Promoting integrated development to balance a mix of social, economic, nature-based activities such
 as, but not limited to, city's special economic zones or urban wetland installation;
- Building health and education facilities to increase provision and improve access to healthcare and education;
- Supporting innovative and technological solutions to support sustainable development of cities.

The product attains its sustainable objective by investing in:

- Sustainable labelled bonds (i.e., green, social, sustainability and sustainability-linked bonds) issued by corporate and government-related issuers domiciled in or exercising the predominant part of their economic activity in Asian countries. The selected bonds should comply with the principles formulated by the International Capital Market Association and receive a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Centre following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.
- 2) Non-labelled bonds issued by corporate and public entities domiciled in or exercising the predominant part of their economic activity in Asian countries that contribute to the development of sustainable Asian cities through their products, services and solutions. The selected issuers should derive at least 20% of their revenues from economic activities that directly contribute to or potentially enable the development of sustainable Asian cities, according to the internal sustainable investment methodology.

The sustainable investment objective of the financial product is social and therefore outside the scope of the environmental objectives defined by the EU Taxonomy.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The following sustainability indicators are used to measure the attainment of the sustainable objective of the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy;
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process; RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicators

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, the product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a

number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the investment manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and the construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support all investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Policy, Engagement and Voting Policy and include the following:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues.
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial poduct's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark J.P. Morgan Asia Credit is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in debt securities issued by Asian entities supporting the development of Sustainable Asian Cities.

The concept of Sustainable Asian Cities is multi-sector and multi-aspect, where investments can be broadly about these five aspects:

- Enhancing urban mobility within and across cities, with a preference for low-carbon options e.g. public transport
- Improving cities' basic infrastructure to operate and thrive, as well as improving cities' resilience to extreme weather events
- Promoting integrated development to balance a mix of social, economic, nature-based activities
- Building health and education facilities to increase provision and improve access to healthcare and education
- Supporting innovative and technological solutions to support sustainable development of cities.

The investment universe of this Fund is made up of sustainable labelled bonds and non-labelled bonds from issuers domiciled in, or exercising the predominant part of their economic activity in, Asian countries (such as, but not limited to, China, Indonesia, Korea).

The Fund follows the Thematic approach in investing in companies that provide products and services providing concrete solutions to specific environmental and/or social challenges, seeking to benefit from future growth anticipated in these areas while contributing capital towards the transition towards a low-carbon, inclusive economy.

The selected issuers, according to the proprietary methodology, must have at least 20% of their revenues in the activities, which are directly contributing to the theme, and/or potentially enablers of the above concept.

The Fund invests at least 90% of its assets (excluding investments in cash and cash equivalents) in securities issued by issuers that have an ESG score or assessment using the investment manager internal methodology.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager. The Fund achieves this objective by investing in debt securities that are validated by the Sustainability Centre of BNPP AM.

The elements of the investment strategy to attain the sustainable investment objective of this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>:

- The financial product shall have at least 90% of its assets (excluding ancillary assets) covered by the ESG analysis based on the proprietary ESG methodology;
- The financial product shall invest at least 80% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance, include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance

Good governance practices include sound management structures, employee relations, remuneration of staff ad tax compliance.

Asset allocation describes the share of investments in specific assets.

investee

capital

What is the asset allocation and the minimum share of sustainable investments?

The minimum proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 80%.

How does the use of derivatives attain the sustainable investment objective?

Financial derivative instruments may be used for hedging and/or efficient portfolio management and/or investment purposes. Either these instruments are not used to attain the sustainable investment objective of the product, or they are aligned with the sustainable investment objective of the financial product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

investments that do not take into account the criteria for environmentally sustainable economic activities under

the EU Taxonomy.

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 60%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product. The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or

social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

BNP PARIBAS FUNDS SUSTAINABLE ASIA Product name:

EX-JAPAN EQUITY

Legal Entity Identifier: 213800T6J6BR0Z2FLB50

Environmental and/or social characteristics

	Does this financial product have a sus	tainable investment objective?
	It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments
l	in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and

anti-bribery matters.

or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

<u>Corporate</u> <u>mandatory</u> <u>indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint

- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The investment

The Fund is actively managed. The benchmark MSCI AC Asia ex-Japan (NR) is used for performance comparison only.

The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by socially responsible Asian companies, and/or companies operating in Asia (excluding Japan) with a solid financial structure and/or potential for earnings growth. It may be invested in Mainland China shares restricted to foreign investors such as China A shares which can be listed on a Stock Connect or through a use of a specific license granted by the Chinese authorities.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund. The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets. The approach is implemented in order to consistently achieve a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% of securities with the lowest ESG Score. An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology
 - The financial product shall have the weighted average ESG score of its portfolio higher than the average weighted ESG score of its investment universe after eliminating at least 20% of securities with the lowest ESG Score, as defined in the Prospectus
 - The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include

employee relations,

remuneration of

staff and tax

compliance.

structures.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a

- **turnover** reflecting the share of revenue from green activities of investee companies.

share of:

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not vet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics

promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental
or social objective,
provided that the
investment does
not significantly
harm any
environmental or
social objective and
that the investee

companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE Legal Entity Identifier : 213800WMDHBG3SVIPG26 ENHANCED BOND 12M

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective? Yes No		
103	X NO	
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30.00% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy	
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	
	x with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental social and governance practices.

Corporate issuers

The investment strategy selects corporate issuers with the best ESG practices within their sector of activity through:

The positive screening using a selectivity approach. This involves evaluation of ESG performance of an issuer against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

Principal adverse **impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk

tolerance.

The Fund is actively managed. The composite benchmark 80% cash Index €ster + 20% Bloomberg Euro Aggregate 1-3 years (EUR) RI. is used for performance comparison only.

The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to achieve a performance that is higher than the rate of return of the euro money market over a minimum investment period of 12 months by investing in euro-denominated debt instruments which are chosen given their practices in terms of sustainable development (social responsibility and/or environmental responsibility and/or corporate governance).

It is based on active management based on a systematic and disciplined approach to securities selection, combining extra-financial research, financial research and quantitative analysis.

Exposure to currencies other than the EUR will be less than 5%.

Investment grade structured debts may represent up to 20% of the assets. It may not be invested in equities.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the of the investment process of the Fund.

The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets.

The approach is implemented in order to consistently eliminate at least 20% of the investment universe being bonds issued by private issuers from the Eurozone and having a maturity between 1 to 3 years prior to applying ESG filters.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
 - The financial product's investment universe shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
 - The financial product shall invest at least 30% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product's investment universe is reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 30%.

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

m

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- What is the minimum share of investments in transitional and enabling activities? Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental social and governance practices.

Corporate issuers

The investment strategy selects corporate issuers with the best ESG practices within their sector of activity through:

The positive screening using a selectivity approach. This involves evaluation of ESG performance of an issuer against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

Principal adverse **impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The Fund seeks to increase the value of its assets over the medium term by investing in euro denominated bonds or other debt instruments issued by companies which are considered the best according to their practices in terms of sustainable development (social responsibility and/or environmental responsibility and/or corporate governance).

Investment grade structured debts may represent up to 20% of the assets

It is actively managed and as such may invest in securities that are not included in the index which is Bloomberg Barclays Euro Aggregate 500MM (RI).

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets.

The approach is implemented in order to consistently eliminate at least 20% of the index prior to applying ESG filters.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies

decisions based on factors such as investment objectives and risk tolerance.

The investment

strategy guides

investment

due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product's investment universe shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall invest at least 30% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product's investment universe is reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

employee relations,

remuneration of staff and tax

practices include sound management

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum

commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 30%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of: - turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy. operational **expenditure** (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not vet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

investments with an objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics

promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are

attains the environmental or

social

indexes to measure whether the

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly

harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE EURO CORPORATE BOND

Legal Entity Identifier: 21380041X8BU15MQFB08

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective? Yes No		
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 60.00% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental social and governance practices.

Corporate issuers

The investment strategy selects corporate issuers with the best ESG practices within their sector of activity through:

The positive screening using a selectivity approach. This involves evaluation of ESG performance of an issuer against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

Principal adverse **impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The Fund seeks to increase the value of its assets over the medium term by investing in investment grade bonds issued in any currencies by European companies or companies operating in the European Union that respect sustainable development criteria (social responsibility and/or environmental responsibility and/or corporate governance).

After hedging, the sub-fund's exposure to currencies other than the EUR will not exceed 5%.

It is actively managed and as such may invest in securities that are not included in the index which is Bloomberg Barclays Euro Aggregate Corporate (RI).

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets.

The approach is implemented in order to consistently eliminate at least 20% of the index prior to applying ESG filters.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product's investment universe shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall invest at least 60% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product's investment universe is reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

employee relations,

remuneration of staff and tax

practices include sound management

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 60%. For the avoidance of doubt, such a proportion is solely a minimum

commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 60%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting the share of revenue from green activities of investee companies.

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy. - operational
- expenditure (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not vet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

investments with an objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics

promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are

social

indexes to measure whether the

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and

that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE EURO LOW VOL EQUITY

Legal Entity Identifier: 213800MQX37ATN2HWD96

Environmental and/or social characteristics

	Does this financial product have a sus	etainable investment objective?
	It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50.00% of sustainable investments
l	in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the financial product's portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an

investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

This Fund is actively managed. The benchmark MSCI EMU (EUR) NR is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by companies that have their registered offices in one of the member states of the Eurozone and selected through a process aimed at reducing risk by selecting low volatility securities in the Fund.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, in the investments of the Fund.

The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets.

The quantitative approach is implemented in order to consistently achieve the following targets:

- a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% of the least well-rated securities, and
- a portfolio's carbon footprint at least 50% lower than the carbon footprint of the index.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment
 - More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
 - The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
 - The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product,

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are

expressed as a

- share of:
 turnover reflecting
 the share of
 revenue from green
 activities of investee
 companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Enabling activities

make a substantial

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

The two grap

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?
 Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 11%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 10%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental
or social objective,
provided that the
investment does
not significantly
harm any
environmental or
social objective and
that the investee

companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE EURO MULTI-FACTOR CORPORATE BOND

Legal Entity Identifier: 213800DPOGNREC41KM77

Environmental and/or social characteristics

Does this financial product have a sus	tainable investment objective? No
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 37.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the financial product's portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an

investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk

tolerance.

The Fund seeks to increase the value of its assets over the medium term, by investing in Investment Grade corporate bonds denominated in EUR issued primarly by socially responsible companies.

The Fund's portfolio will be built based on a systematic approach, combining several factor criteria such as, but not limited to, (i) cash flow generation (quality), (ii) relative valuation compared to peers (value), (iii) medium term performance trend (momentum) and (iv) low indebtedness ("low-risk").

Exposure to currencies other than the EUR will be less than 5%.

Investment grade structured debts may represent up to 20% of the assets.

It is actively managed and as such may invest in securities that are not included in the index which is ICE BofAML Euro Corporate (EUR) RI.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets.

The quantitative approach is implemented in order to consistently achieve the following targets:

- a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% of the least

well-rated securities, and

- a portfolio's carbon footprint at least 50% lower than the carbon footprint of the index.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment
 - More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe after eliminating at least 20% of securities with the lowest ESG Score, as defined in the Prospectus
 - The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
 - The financial product shall invest at least 37% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

Good governance

employee relations,

remuneration of staff and tax

practices include sound management

structures,

compliance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 37%.

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

m

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 11%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

(2

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 9%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or

social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE EURO MULTI-FACTOR EQUITY

Legal Entity Identifier: 213800MX4TNTP1BW9349

Environmental and/or social characteristics

Does this financial product have a sus	stainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	 with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the financial product's portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- The percentage of the financial product's portfolio invested in investments aligned with the EU Taxonomy
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, the protection and/or restoration of biodiversity and ecosystems. The extent to which the sustainable investments with an environmental objective are aligned with the EU Taxonomy will be disclosed in the annual report of the financial product.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

Principal adverse **impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental. social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives $\underline{\textit{Social}}$
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by socially responsible companies that have their registered offices in one of the member states of the Eurozone.

The portfolio is built based on a systematic approach, combining several equity factor criterions such as value, profitability, low-volatility and momentum.

Exposure to currencies other than the EUR will be less than 10%.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets.

The quantitative approach is implemented in order to consistently achieve the following targets:

- a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% of the least well-rated securities, and
- a portfolio's carbon footprint at least 50% lower than the carbon footprint of the index.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

It is actively managed and as such may invest in securities that are not included in the index which is MSCI EMU (NR).

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

• What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment
- More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- The financial product shall invest at least 2% of its assets in investments aligned with the EU Taxonomy as disclosed below
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a

- **turnover** reflecting the share of revenue from green activities of investee companies.

share of:

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

The Management Company is currently improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and Taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 12%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 13%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference

whether the

attains the environmental or

social

benchmarks are indexes to measure

financial product

characteristics that

they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and

that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE EUROPE

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	X No	
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40.00% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and

anti-bribery matters.

or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

<u>Corporate</u> <u>mandatory</u> <u>indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint

- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives ${\it Social}$
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The investment strategy guides

strategy guides investment decisions based on factors such as investment objectives and risk tolerance. The Fund is actively managed. The benchmark MSCI EUROPE (NR) is used for performance comparison only.

The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by European companies that respect sustainable development criteria (social responsibility and/or environmental responsibility and/or corporate governance) and which distribute dividends that are higher than the average on the European markets and that are sustainable over the medium term.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund. The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets. The approach is implemented in order to consistently achieve a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% of securities with the lowest ESG Score. An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology
 - The financial product shall have the weighted average ESG score of its portfolio higher than the average weighted ESG score of its investment universe after eliminating at least 20% of securities with the lowest ESG Score, as defined in the Prospectus
 - The financial product shall invest at least 40% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of

staff and tax

compliance.

structures.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a

- **turnover** reflecting the share of revenue from green activities of investee companies.

share of:

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 51%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 40%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not vet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities? Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 15%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics

promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

MULTI-FACTOR EQUITY

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	No No	
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50.00% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	 with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective 	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the financial product's portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- The percentage of the financial product's portfolio invested in investments aligned with the EU Taxonomy
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, the protection and/or restoration of biodiversity and ecosystems. The extent to which the sustainable investments with an environmental objective are aligned with the EU Taxonomy will be disclosed in the annual report of the financial product.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

Principal adverse **impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental. social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by European companies.

It is actively managed and as such may invest in securities that are not included in the index which is MSCI Europe (NR).

The portfolio is built based on a systematic approach, combining several equity factor criterions such as value, profitability, low-volatility and momentum.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, in the investments of the Fund.

The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets.

The quantitative approach is implemented in order to consistently achieve the following targets:

- a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% of the least well-rated securities, and
- a portfolio's carbon footprint at least 50% lower than the carbon footprint of the index.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment
- More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- The financial product shall invest at least 2% of its assets in investments aligned with the EU Taxonomy as disclosed below
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a

- **turnover** reflecting the share of revenue from green activities of investee companies.

share of:

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

The Management Company is currently improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and Taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?
 Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 9%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 17%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

BNP PARIBAS FUNDS SUSTAINABLE EUROPE Product name:

VALUE

Environmental and/or social characteristics

Legal Entity Identifier: 2138001J0JK911RS3920

Does this financial product have a sus	tainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and

anti-bribery matters.

or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

<u>Corporate</u> <u>mandatory</u> <u>indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint

- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The Fund seeks to increase the value of its assets over the medium term by investing in shares undervalued as compared to the market on the purchase date, issued by socially responsible European companies.

It is actively managed and as such may invest in securities that are not included in the index which is MSCI Europe Value (NR).

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets.

The approach is implemented in order to consistently achieve a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% of the least well-rated securities.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology
- The financial product shall have the weighted average ESG score of its portfolio higher than the average weighted ESG score of its investment universe after eliminating at least 20% of securities with the lowest ESG Score, as defined in the Prospectus
- The financial product shall invest at least 35% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 51%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 35%.

The remaining proportion of the investments may include:

Asset allocation

describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an

environmental objective.

Transitional activities are activitie low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 10%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are

whether the

attains the environmental or

social

indexes to measure

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does

not significantly harm any environmental or social objective and that the investee companies follow good governance practices. The EU Taxonomy is

a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

BNP PARIBAS FUNDS SUSTAINABLE GLOBAL Product name: **CORPORATE BOND**

Legal Entity Identifier: 2RWK0J6LXFXM28DB0064

Environmental and/or social characteristics

Does this financial product have a sus	etainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental social and governance practices.

Corporate issuers

The investment strategy selects corporate issuers with the best ESG practices within their sector of activity through:

The positive screening using a selectivity approach. This involves evaluation of ESG performance of an issuer against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation

• What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

Principal adverse **impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

This Fund is actively managed. The composite benchmark 50% Bloomberg US Aggregate Corporate index + 50% Bloomberg Euro Aggregate Corporate (hedged in USD) index is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the composite benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in investment grade corporate bonds and/or other debt instruments issued by companies in any country which are the best on their sector according to their practices in terms of sustainable development (social responsibility and/or environmental responsibility and/or corporate governance). The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund. The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets. The approach is implemented in order to consistently eliminate at least 20% of the index prior to applying ESG filters. An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product's investment universe shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy
- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product's investment universe is reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include sound management

employee relations,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted

environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

- #1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2** Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B** Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of: - turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy. operational **expenditure** (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not vet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

investments with an objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics

promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective? Yes No It will make a minimum of It promotes Environmental/Social (E/S) sustainable investments with characteristics and while it does not have an environmental objective: as its objective a sustainable investment, _% it will have a minimum proportion of 35.00% of sustainable investments in economic activities that system, establishing with an environmental objective in economic qualify as environmentally activities that qualify as environmentally sustainable under the EU sustainable under the EU Taxonomy Taxonomy with an environmental objective in in economic activities that do economic activities that do not qualify as not qualify as environmentally environmentally sustainable under the EU it does not include a sustainable under the EU Taxonomy Taxonomy with a social objective Х It will make a minimum of It promotes E/S characteristics, but will sustainable investments with a not make any sustainable investments social objective: ____%

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and

anti-bribery matters.

or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

<u>Corporate</u> <u>mandatory</u> <u>indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint

- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The Fund is actively managed. The benchmark MSCI AC World (NR) is used for performance comparison only.

The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by socially responsible companies from all over the world with a solid financial structure and/or potential for earnings growth. It may be invested in Mainland China shares restricted to foreign investors such as China A shares which can be listed on a Stock Connect or through a use of a specific license granted by the Chinese authorities.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund. The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets. The approach is implemented in order to consistently achieve a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% of securities with the lowest ESG Score. An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

• What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology
- The financial product shall have the weighted average ESG score of its portfolio higher than the average weighted ESG score of its investment universe after eliminating at least 20% of securities with the lowest ESG Score, as defined in the Prospectus
- The financial product shall invest at least 35% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

employee relations,

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum

commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 35%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2** Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of: - turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy. operational **expenditure** (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?
 Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 10%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics

promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and

that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE GLOBAL

Legal Entity Identifier: 213800LPPB7K3GLUBB31

LOW VOL EQUITY

Environmental and/or social characteristics

Does this financial product have a sus	tainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the financial product's portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an

investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The Fund is actively managed. The benchmark MSCI World (NR) is used for performance comparison only.

The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares of socially responsible companies from all over the world and selected through a process aimed at reducing risk by minimising volatility in the Fund.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund. The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets. The quantitative approach is implemented in order to consistently achieve the following targets:

- a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% securities with the lowest ESG score, and
- a portfolio's carbon footprint at least 50% lower than the carbon footprint of the index.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this

objectives and risk

tolerance.

 $financial\ product\ as\ described\ below\ are\ systematically\ integrated\ throughout\ the\ investment\ process.$

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment
 - More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
 - The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
 - The financial product shall invest at least 40% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a

- **turnover** reflecting the share of revenue from green activities of investee companies.

share of:

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 40%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or

investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 11%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Product name: BNP PARIBAS FUNDS SUSTAINABLE GLOBAL MULTI-FACTOR CORPORATE BOND

Legal Entity Identifier: 213800YL78JBVLCMJI38

Environmental and/or social characteristics

	Does this financial product have a sus	etainable investment objective?
	It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 36.00% of sustainable investments
l	in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the financial product's portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an

investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The Fund is actively managed. The Bloomberg Global Aggregate Corporate Index USD Hedged benchmark is used for the investment universe selection and performance comparison.

The Fund is not benchmark-constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in Investment Grade corporate bonds denominated in various currencies.

The Investment Manager will select securities from the Benchmark universe and will built the Fund's portfolio on a basis of a systematic approach, combining several factor criteria such as, but not limited to, (i) cash flow generation (quality), (ii) relative valuation compared to peers (value), (iii) medium term performance trend (momentum) and (iv) low indebtedness («low-risk»).

Exposure to currencies other than the USD will be less than 5%.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, in the investments of the Fund.

The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets.

The quantitative approach is implemented in order to consistently achieve the following targets:

- a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% of the least well-rated securities, and
- a portfolio's carbon footprint at least 50% lower than the carbon footprint of the index.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment
 - More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe after eliminating at least 20% of securities with the lowest ESG Score, as defined in the Prospectus
 - The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
 - The financial product shall invest at least 36% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

Good governance

practices include

structures,

compliance.

sound management

employee relations,

remuneration of staff and tax

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational
 expenditure (OpEx)
 reflecting green
 operational
 activities of investee
 companies.

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 36%.

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

m

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an

environmental

environmentally sustainable

under the EU

Taxonomy.

economic activities

criteria for

objective that **do not** take into account the

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

(2

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 9%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	No No	
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40.00% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU	
Taxonomy	Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the financial product's portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an

investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark MSCI World (NR) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark. The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by socially responsible companies from all over the world.

The portfolio is built based on a systemic approach, combining several equity factor criterions such as value, profitability, low-volatility and momentum.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets.

The quantitative approach is implemented in order to consistently achieve the following targets:

- a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% of the least well-rated securities, and
- a portfolio's carbon footprint at least 50% lower than the carbon footprint of the index.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment
- More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The financial product shall invest at least 40% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

employee relations,

remuneration of staff and tax

practices include sound management

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum

commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 40%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2** Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of: - turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy. operational **expenditure** (OpEx) reflecting green operational activities of investee

companies.

Asset allocation

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?
 Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 6%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 13%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics

promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are

attains the environmental or

social

indexes to measure whether the

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental
or social objective,
provided that the
investment does
not significantly
harm any
environmental or
social objective and
that the investee

companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE GLOBAL MULTI-FACTOR HIGH YIELD BOND

Legal Entity Identifier: 213800N0F8HLJ79ZB806

Environmental and/or social characteristics

Does this financial product have a sus	etainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the financial product's portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an

investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The ICE BofAML Global High Yield Constrained Index USD Hedged benchmark is used for the investment universe selection and performance comparison.

The Fund is not benchmark-constrained and its performance may deviate significantly from that of the benchmark.

It seeks to increase the value of its assets over the medium term by investing in High Yield bonds issued primarily by socially responsible companies denominated in various currencies.

The Investment Manager will select securities from the benchmark universe and built the sub-fund's portfolio on a basis of a systematic approach, combining several factor criteria such as, but not limited to, (i) cash flow generation (quality), (ii) relative valuation compared to peers (value), (iii) medium term performance trend (momentum) and (iv) low indebtedness («low-risk»).

Exposure to currencies other than the USD will be less than 5%.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, in the investments of the Fund.

The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets.

The quantitative approach is implemented in order to consistently achieve the following targets:

- -a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% of the least well-rated securities, and
- -a portfolio's carbon footprint at least 50% lower than the carbon footprint of the index.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax

compliance.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment
 - More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe after eliminating at least 20% of securities with the lowest ESG Score, as defined in the Prospectus
 - The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
 - The financial product shall invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product,

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are

expressed as a

- share of:
 turnover reflecting
 the share of
 revenue from green
 activities of investee
 companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 20%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- What is the minimum share of investments in transitional and enabling activities? Not applicable

are sustainable investments with an environmental objective that **do not** take into account the **criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are

attains the environmental or

social

indexes to measure whether the

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental
or social objective,
provided that the
investment does
not significantly
harm any
environmental or
social objective and
that the investee

companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE JAPAN MULTI-FACTOR EQUITY

Legal Entity Identifier: 213800GWBTLE3P1AUD47

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	No No	
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50.00% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the financial product's portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an

investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark TOPIX (NR) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by Japanese companies, and/or companies operating in Japan.

The portfolio is built based on a systematic approach, combining several equity factor criterions such as value, profitability, low-volatility and momentum.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets.

The quantitative approach is implemented in order to consistently achieve the following targets:

- a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% of the least well-rated securities, and
- a portfolio's carbon footprint at least 50% lower than the carbon footprint of the index.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment
- More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The financial product shall invest at least 50% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

employee relations,

remuneration of staff and tax

practices include sound management

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum

commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 50%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2** Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of: - turnover reflecting the share of revenue from green activities of investee companies. - capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy. operational **expenditure** (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not vet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 12%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 11%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics

promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Sustainable Multi-Asset Balanced

Legal entity identifyier: 213800LNF3Y04Y1C8T55

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a s	eustainable investment objective? No
It will make a minimum of sustainable investments with an environmental objective: ——% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

Sustainable investment means

follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable

investments with an environmental objective might be aligned with the Taxonomy or not.

an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria, and by investing directly, or indirectly through funds, in bonds or shares of issuers selected based on their practices and activities linked to sustainable development through either the best-in-class approach or sustainable thematic approach.

The best-in-class approach consists in assessing ESG performance of issuers against a combination of environmental, social and governance (ESG) factors and investing in issuers that demonstrate superior environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The sustainable thematic approach consists in investing in :

o Companies that offer products services and solutions helping to address specific environmental and/or social challenges;

 Green bonds, social bonds or sustainability bonds issued by corporates, supranational sovereign agencies, local entities and/or government to support projects with environmental ad/or social objectives

When investing through passive funds and/or external funds, the investment manager relies on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The external fund analysis team within the investment manager is dedicated to select external funds using a proprietary methodology.

In addition to the usual selection criteria (quantitative analysis, qualitative analysis and risk due diligence), the team offers a ranking based on extra-financial (or ESG) criteria for each recommended manager or fund in each sector. The team applies a qualitative rather than quantitative ESG rating to the funds and managers selected in order to assess the effective implementation of ESG practices and the inclusion of extra-financial criteria in their investment process.

The ESG rating system for the team is based on fundamental principles:

- Consistency of approach systematically applied across all asset classes and sectors to ensure consistency in rating
- A proprietary methodology applicable to all funds, with well-defined rules to limit any subjectivity
- An ESG rating for both the management company and the fund (the last including the ESG rating of its management company) The team also analyses a specific SRI (Socially Responsible Investment) selection based on complementary approaches (negative screening, best-in-class / best-effort, positive screening / impact investing)

As all external funds under selection, SRI funds must go through a selection process in three stages (quantitative analysis, qualitative analysis and risk due diligence). Therefore the ESG criteria applied to the investment process are assessed by examining in particular (non-exhaustive list):

- The extra-financial constraints applicable to the Fund's investment universe
- The use of quantitative and qualitative criteria and ESG research in the investment process
- Taking financial and extra-financial requirements into account in the construction of the portfolio
- Monitoring and compliance check with the constraints of socially responsible investment

When investing directly or through internal active funds, the investment manager relies on a proprietary ESG methodology and applies exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Policy (RBC Policy).

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- o Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- o Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the direct investments and internal active funds compliant with the RBC Policy;
- The percentage of the financial product's assets invested in securities selected based on either the best-in-class approach or sustainable thematic approach;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation;
- The percentage of the financial product's portfolio invested in investments aligned with the EU Taxonomy.
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to indirectly finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Sustainable Investment minimum commitment of the financial product is calculated on an asset under management (AuM) weighted methodology without any minimum required for any underlying funds. As such, a look-through approach is applied in order to calculate the financial product's sustainable investment minimum proportion based on the data reported by the underlying funds.

Any sustainable investment commitment reported by external active and/or passive funds, selected by the dedicated internal team, are assessed thanks to specific methodologies developed by third-party asset managers and/or index providers.

Any sustainable investment commitment reported by direct investments or through internal active and/or passive funds are assessed thanks to the proprietary sustainable investment methodology as described below.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets;
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements

More information on the internal methodology can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make, through investments into direct lines or internal active funds, should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset manager and index providers assessment and reporting to perform the DNSH analysis in accordance with the regulatory requirements.

—— How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product, through investments into direct lines or internal active funds, takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment:
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product, through investments into direct lines or internal active funds, is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for alignment of sustainable investments with the above-mentioned international norms and conventions.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes,

The product considers some principal adverse impacts on sustainability factors. When investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

On the other hand, all its investments into direct lines or internal active funds systematically implement the sustainable investment pillars defined in the GSS into the financial product's investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The composite benchmark 50% MSCI AC World (hedged in USD) index + 50% Bloomberg Euro Aggregate (hedged in USD) index is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the composite benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing directly and/or indirectly (through funds) in bonds, or shares of issuers chosen given their practices in terms of sustainable development (social responsibility and/or environmental responsibility and/or corporate governance). The Fund will be managed against the model portfolio (50% equities, 50% bonds).

The manager can change the actual asset class weightings based on market conditions and forecasts.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund invests directly or indirectly (through funds, i.e. UCITS, UCIs, or ETFs) at least 90% of its assets (excluding investments in cash and cash equivalents) in securities selected based on the best-in-class approach and sustainable thematic approach.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall invest directly or through internal funds in compliance with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>;

- The financial product shall invest directly or indirectly at least 90% of its assets in bonds or shares of issuers selected on either the best-in-class approach or sustainable thematic approach;
- The financial product shall invest at least 35% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus;
- The financial product shall invest at least 2% of its assets in investments aligned with the EU Taxonomy.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

When investing through direct lines or internal active funds, the investment manager relies on its internal proprietary assessment of good governance practices of the investee companies performed by the BNP Paribas Asset Management's Sustainability Centre as described below.

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

However, when investing through external funds and/or passive funds, selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers to assess good governance practices of the investee companies.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

When investing through direct lines or internal active and/or passive funds, the investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

However, when investing through external active and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 35%.

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management and/or hedging and/or investment purposes. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

Even if the investment objective of the product falls within the framework of the environmental objectives defined by the Taxonomy Regulation, all the economic activities related to this objective are not necessarily covered by the latter. In addition, taxonomy alignment data is still not yet communicated or published and the activities of certain issuers require additional fundamental analysis in order to be accounted for and are therefore not taken into account by the taxonomy data that we use.

The Management Company is currently improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and Taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

The minimum share of investments in transitional and enabling activities in the meaning of the Taxonomy Regulationc is 0% in transitional activities and 0% in enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 11%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in funds exposed to taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in funds exposed to sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 8%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable

Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

social objective, provided that the

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria, and by investing directly, or indirectly through funds, in bonds or shares of issuers selected based on their practices and activities linked to sustainable development through either the best-in-class approach or sustainable thematic approach.

The best-in-class approach consists in assessing ESG performance of issuers against a combination of environmental, social and governance (ESG) factors and investing in issuers that demonstrate superior environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The sustainable thematic approach consists in investing in :

o Companies that offer products services and solutions helping to address specific environmental and/or social challenges;

 Green bonds, social bonds or sustainability bonds issued by corporates, supranational sovereign agencies, local entities and/or government to support projects with environmental ad/or social objectives

When investing through passive funds and/or external funds, the investment manager relies on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The external fund analysis team within the investment manager is dedicated to select external funds using a proprietary methodology.

In addition to the usual selection criteria (quantitative analysis, qualitative analysis and risk due diligence), the team offers a ranking based on extra-financial (or ESG) criteria for each recommended manager or fund in each sector. The team applies a qualitative rather than quantitative ESG rating to the funds and managers selected in order to assess the effective implementation of ESG practices and the inclusion of extra-financial criteria in their investment process.

The ESG rating system for the team is based on fundamental principles:

- Consistency of approach systematically applied across all asset classes and sectors to ensure consistency in rating
- A proprietary methodology applicable to all funds, with well-defined rules to limit any subjectivity
- An ESG rating for both the management company and the fund (the last including the ESG rating of its management company) The team also analyses a specific SRI (Socially Responsible Investment) selection based on complementary approaches (negative screening, best-in-class / best-effort, positive screening / impact investing)

As all external funds under selection, SRI funds must go through a selection process in three stages (quantitative analysis, qualitative analysis and risk due diligence). Therefore the ESG criteria applied to the investment process are assessed by examining in particular (non-exhaustive list):

- The extra-financial constraints applicable to the Fund's investment universe
- The use of quantitative and qualitative criteria and ESG research in the investment process
- Taking financial and extra-financial requirements into account in the construction of the portfolio
- Monitoring and compliance check with the constraints of socially responsible investment

When investing directly or through internal active funds, the investment manager relies on a proprietary ESG methodology and applies exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Policy (RBC Policy).

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- o Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- o Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the direct investments and internal active funds compliant with the RBC Policy;
- The percentage of the financial product's assets invested in securities selected based on either the best-in-class approach or sustainable thematic approach;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation.
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to indirectly finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Sustainable Investment minimum commitment of the financial product is calculated on an asset under management (AuM) weighted methodology without any minimum required for any underlying funds. As such, a look-through approach is applied in order to calculate the financial product's sustainable investment minimum proportion based on the data reported by the underlying funds.

Any sustainable investment commitment reported by external active and/or passive funds, selected by the dedicated internal team, are assessed thanks to specific methodologies developed by third-party asset managers and/or index providers.

Any sustainable investment commitment reported by direct investments or through internal active and/or passive funds are assessed thanks to the proprietary sustainable investment methodology as described below.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets;
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements

More information on the internal methodology can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make, through investments into direct lines or internal active funds, should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset manager and index providers assessment and reporting to perform the DNSH analysis in accordance with the regulatory requirements.

—— How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product, through investments into direct lines or internal active funds, takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product, through investments into direct lines or internal active funds, is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for alignment of sustainable investments with the above-mentioned international norms and conventions.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×

Yes,

The product considers some principal adverse impacts on sustainability factors. When investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

On the other hand, all its investments into direct lines or internal active funds systematically implement the sustainable investment pillars defined in the GSS into the financial product's investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

This Fund is actively managed without reference to an index. The Fund seeks to increase the value of its assets over the medium term with a moderate volatility by investing directly and/or indirectly (through funds and financial derivative instruments) in sustainable investments across all types of asset classes. The Fund may invest directly or indirectly in, inter alia, shares, bonds, real estate, commodities. Investment in investment grade structured debt securities may represent up to 20% of the assets. The Fund may be exposed for maximum 40% of its assets on emerging markets (including up to 30% of its assets on Mainland China).

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund. The Fund invests directly or indirectly at least 90% of its assets (excluding investments in cash and cash equivalents) in securities selected based on the best-in-class approach and sustainable thematic approach. An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall invest directly or through internal funds in compliance with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>;

- The financial product shall invest directly or indirectly at least 90% of its assets in bonds or shares of issuers selected on either the best-in-class approach or sustainable thematic approach;
- The financial product shall invest at least 30% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

When investing through direct lines or internal active funds, the investment manager relies on its internal proprietary assessment of good governance practices of the investee companies performed by the BNP Paribas Asset Management's Sustainability Centre as described below.

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

However, when investing through external funds and/or passive funds, selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers to assess good governance practices of the investee companies.

What is the asset allocation planned for this financial product?

When investing through direct lines or internal active and/or passive funds, the investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S

Asset allocation describes the share of investments in specific assets.

Good governance practices include

sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

However, when investing through external active and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 48%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 30%.

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.
 - How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management and/or hedging and/or investment purposes. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 7%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in funds exposed to taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in funds exposed to sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 6%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Reference benchmarks are indexes to

measure whether the financial

product attains the

environmental or

characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

social objective, provided that the

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria, and by investing directly, or indirectly through funds, in bonds or shares of issuers selected based on their practices and activities linked to sustainable development through either the best-in-class approach or sustainable thematic approach.

The best-in-class approach consists in assessing ESG performance of issuers against a combination of environmental, social and governance (ESG) factors and investing in issuers that demonstrate superior environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The sustainable thematic approach consists in investing in :

o Companies that offer products services and solutions helping to address specific environmental and/or social challenges;

 Green bonds, social bonds or sustainability bonds issued by corporates, supranational sovereign agencies, local entities and/or government to support projects with environmental ad/or social objectives

When investing through passive funds and/or external funds, the investment manager relies on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The external fund analysis team within the investment manager is dedicated to select external funds using a proprietary methodology.

In addition to the usual selection criteria (quantitative analysis, qualitative analysis and risk due diligence), the team offers a ranking based on extra-financial (or ESG) criteria for each recommended manager or fund in each sector. The team applies a qualitative rather than quantitative ESG rating to the funds and managers selected in order to assess the effective implementation of ESG practices and the inclusion of extra-financial criteria in their investment process.

The ESG rating system for the team is based on fundamental principles:

- Consistency of approach systematically applied across all asset classes and sectors to ensure consistency in rating
- A proprietary methodology applicable to all funds, with well-defined rules to limit any subjectivity
- An ESG rating for both the management company and the fund (the last including the ESG rating of its management company) The team also analyses a specific SRI (Socially Responsible Investment) selection based on complementary approaches (negative screening, best-in-class / best-effort, positive screening / impact investing)

As all external funds under selection, SRI funds must go through a selection process in three stages (quantitative analysis, qualitative analysis and risk due diligence). Therefore the ESG criteria applied to the investment process are assessed by examining in particular (non-exhaustive list):

- The extra-financial constraints applicable to the Fund's investment universe
- The use of quantitative and qualitative criteria and ESG research in the investment process
- Taking financial and extra-financial requirements into account in the construction of the portfolio
- Monitoring and compliance check with the constraints of socially responsible investment

When investing directly or through internal active funds, the investment manager relies on a proprietary ESG methodology and applies exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Policy (RBC Policy).

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- o Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- o Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the direct investments and internal active funds compliant with the RBC Policy;
- The percentage of the financial product's assets invested in securities selected based on either the best-in-class approach or sustainable thematic approach;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation;
- The percentage of the financial product's portfolio invested in investments aligned with the EU Taxonomy.
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to indirectly finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Sustainable Investment minimum commitment of the financial product is calculated on an asset under management (AuM) weighted methodology without any minimum required for any underlying funds. As such, a look-through approach is applied in order to calculate the financial product's sustainable investment minimum proportion based on the data reported by the underlying funds.

Any sustainable investment commitment reported by external active and/or passive funds, selected by the dedicated internal team, are assessed thanks to specific methodologies developed by third-party asset managers and/or index providers.

Any sustainable investment commitment reported by direct investments or through internal active and/or passive funds are assessed thanks to the proprietary sustainable investment methodology as described below.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets;
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements

More information on the internal methodology can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make, through investments into direct lines or internal active funds, should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset manager and index providers assessment and reporting to perform the DNSH analysis in accordance with the regulatory requirements.

—— How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product, through investments into direct lines or internal active funds, takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es"

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

(Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT **SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations**.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product, through investments into direct lines or internal active funds, is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for alignment of sustainable investments with the above-mentioned international norms and conventions.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes,

The product considers some principal adverse impacts on sustainability factors. When investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

On the other hand, all its investments into direct lines or internal active funds systematically implement the sustainable investment pillars defined in the GSS into the financial product's investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The composite benchmark 75% MSCI AC World (hedged in USD) index + 25% Bloomberg Euro Aggregate (hedged in USD) index is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the composite benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing directly and/or indirectly (through funds) in bonds, or shares of issuers chosen given their practices in terms of sustainable development (social responsibility and/or environmental responsibility and/or corporate governance). The Fund will be managed against the model portfolio (75% equities, 25% bonds).

The manager can change the actual asset class weightings based on market conditions and forecasts.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund invests directly or indirectly (through funds, i.e. UCITS, UCIs, or ETFs) at least 90% of its assets (excluding investments in cash and cash equivalents) in securities selected based on the best-in-class approach and sustainable thematic approach.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall invest directly or through internal funds in compliance with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>;

- The financial product shall invest directly or indirectly at least 90% of its assets in bonds or shares of issuers selected on either the best-in-class approach or sustainable thematic approach;
- The financial product shall invest at least 35% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus;
- The financial product shall invest at least 2% of its assets in investments aligned with the EU Taxonomy.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

When investing through direct lines or internal active funds, the investment manager relies on its internal proprietary assessment of good governance practices of the investee companies performed by the BNP Paribas Asset Management's Sustainability Centre as described below.

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

Good governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

However, when investing through external funds and/or passive funds, selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers to assess good governance practices of the investee companies.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

When investing through direct lines or internal active and/or passive funds, the investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

However, when investing through external active and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 35%.

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management and/or hedging and/or investment purposes. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

Even if the investment objective of the product falls within the framework of the environmental objectives defined by the Taxonomy Regulation, all the economic activities related to this objective are not necessarily covered by the latter. In addition, taxonomy alignment data is still not yet communicated or published and the activities of certain issuers require additional fundamental analysis in order to be accounted for and are therefore not taken into account by the taxonomy data that we use.

The Management Company is currently improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. Further subsequent prospectus and Taxonomy-alignment commitments updates will be made accordingly.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily environmentally harmful or unsustainable. In addition, all activities that can make a substantial contribution to environmental as well as social objectives are not yet part of the Taxonomy Regulation.

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

The minimum share of investments in transitional and enabling activities in the meaning of the Taxonomy Regulationc is 0% in transitional activities and 0% in enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in funds exposed to taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in funds exposed to sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 9%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable

Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP Paribas Funds Sustainable Multi-Asset Stability

Legal entity identifyier: 213800X77ZBZRGKT7B43

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a sustainable investment objective?	
• • Yes	• No
It will make a minimum of sustainable investments with an environmental objective: ——% in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

Sustainable investment means

follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852,

establishing a list of environmentally sustainable

economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable

investments with an environmental objective might be aligned with the Taxonomy or not.

an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria, and by investing directly, or indirectly through funds, in bonds or shares of issuers selected based on their practices and activities linked to sustainable development through either the best-in-class approach or sustainable thematic approach.

The best-in-class approach consists in assessing ESG performance of issuers against a combination of environmental, social and governance (ESG) factors and investing in issuers that demonstrate superior environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The sustainable thematic approach consists in investing in :

o Companies that offer products services and solutions helping to address specific environmental and/or social challenges;

 Green bonds, social bonds or sustainability bonds issued by corporates, supranational sovereign agencies, local entities and/or government to support projects with environmental ad/or social objectives

When investing through passive funds and/or external funds, the investment manager relies on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The external fund analysis team within the investment manager is dedicated to select external funds using a proprietary methodology.

In addition to the usual selection criteria (quantitative analysis, qualitative analysis and risk due diligence), the team offers a ranking based on extra-financial (or ESG) criteria for each recommended manager or fund in each sector. The team applies a qualitative rather than quantitative ESG rating to the funds and managers selected in order to assess the effective implementation of ESG practices and the inclusion of extra-financial criteria in their investment process.

The ESG rating system for the team is based on fundamental principles:

- Consistency of approach systematically applied across all asset classes and sectors to ensure consistency in rating
- A proprietary methodology applicable to all funds, with well-defined rules to limit any subjectivity
- An ESG rating for both the management company and the fund (the last including the ESG rating of its management company) The team also analyses a specific SRI (Socially Responsible Investment) selection based on complementary approaches (negative screening, best-in-class / best-effort, positive screening / impact investing)

As all external funds under selection, SRI funds must go through a selection process in three stages (quantitative analysis, qualitative analysis and risk due diligence). Therefore the ESG criteria applied to the investment process are assessed by examining in particular (non-exhaustive list):

- The extra-financial constraints applicable to the Fund's investment universe
- The use of quantitative and qualitative criteria and ESG research in the investment process
- Taking financial and extra-financial requirements into account in the construction of the portfolio
- Monitoring and compliance check with the constraints of socially responsible investment

When investing directly or through internal active funds, the investment manager relies on a proprietary ESG methodology and applies exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Policy (RBC Policy).

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- o Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- o Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the direct investments and internal active funds compliant with the RBC Policy;
- The percentage of the financial product's assets invested in securities selected based on either the best-in-class approach or sustainable thematic approach;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation.
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to indirectly finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Sustainable Investment minimum commitment of the financial product is calculated on an asset under management (AuM) weighted methodology without any minimum required for any underlying funds. As such, a look-through approach is applied in order to calculate the financial product's sustainable investment minimum proportion based on the data reported by the underlying funds.

Any sustainable investment commitment reported by external active and/or passive funds, selected by the dedicated internal team, are assessed thanks to specific methodologies developed by third-party asset managers and/or index providers.

Any sustainable investment commitment reported by direct investments or through internal active and/or passive funds are assessed thanks to the proprietary sustainable investment methodology as described below.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets;
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements

More information on the internal methodology can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make, through investments into direct lines or internal active funds, should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset manager and index providers assessment and reporting to perform the DNSH analysis in accordance with the regulatory requirements.

— How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product, through investments into direct lines or internal active funds, takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment:
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product, through investments into direct lines or internal active funds, is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for alignment of sustainable investments with the above-mentioned international norms and conventions.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

×

Yes,

The product considers some principal adverse impacts on sustainability factors. When investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

On the other hand, all its investments into direct lines or internal active funds systematically implement the sustainable investment pillars defined in the GSS into the financial product's investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The composite benchmark 25% MSCI AC World (hedged in USD) index + 75% Bloomberg Euro Aggregate (hedged in USD) index is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the composite benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing directly and/or indirectly (through funds) in bonds, or shares of issuers chosen given their practices in terms of sustainable development (social responsibility and/or environmental responsibility and/or corporate governance). The Fund will be managed against the model portfolio (25% equities, 75% bonds, with a minimum of 50% in fixed income).

The manager can change the actual asset class weightings based on market conditions and forecasts.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund invests directly or indirectly (through funds, i.e. UCITS, UCIs, or ETFs) at least 90% of its assets (excluding investments in cash and cash equivalents) in securities selected based on the best-in-class approach and sustainable thematic approach.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall invest directly or through internal funds in compliance with the RBC Policy by excluding companies involved in controversies due to poor practices related

to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment:

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)</u>;

- The financial product shall invest directly or indirectly at least 90% of its assets in bonds or shares of issuers selected on either the best-in-class approach or sustainable thematic approach;
- The financial product shall invest at least 35% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

When investing through direct lines or internal active funds, the investment manager relies on its internal proprietary assessment of good governance practices of the investee companies performed by the BNP Paribas Asset Management's Sustainability Centre as described below.

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

However, when investing through external funds and/or passive funds, selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers to assess good governance practices of the investee companies.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

When investing through direct lines or internal active and/or passive funds, the investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

However, when investing through external active and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 35%.

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management and/or hedging and/or investment purposes. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

companies.

Taxonomy-aligned activities are

of:

expressed as a share

turnover reflecting the share of revenue

from green activities

- capital expenditure

green investments

made by investee

(CapEx) showing the

companies, e.g. for a

transition to a green

of investee companies

ASSET MANAGEMENT

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 12%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in funds exposed to taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in funds exposed to sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 8%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Reference benchmarks are indexes to

measure whether the financial

product attains the

environmental or

characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
 Not applicable
- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow

good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: BNP PARIBAS FUNDS SUSTAINABLE US MULTI-FACTOR CORPORATE BOND

Legal Entity Identifier: 213800WPHI8FXY82F898

Environmental and/or social characteristics

	Does this financial product have a sus	etainable investment objective?
	It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35.00% of sustainable investments
l	in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the financial product's portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an

investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark BofAML US Corporate (USD) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in Investment Grade corporate bonds denominated in USD issued primarly by socially responsible companies.

The Fund's portfolio will be built based on a systematic approach, combining several factor criteria such as, but not limited to, (i) cash flow generation (quality), (ii) relative valuation compared to peers (value), (iii) medium term performance trend (momentum) and (iv) low indebtedness ("low-risk").

Exposure to currencies other than the USD will be less than 5%.

Investment grade structured debts may represent up to 20% of the assets.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets.

The quantitative approach is implemented in order to consistently achieve the following targets:

- a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% of the least well-rated securities, and
- a portfolio's carbon footprint at least 50% lower than the carbon footprint of the index.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax

compliance.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment
 - More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe after eliminating at least 20% of securities with the lowest ESG Score, as defined in the Prospectus
 - The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
 - The financial product shall invest at least 35% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product,

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are

expressed as a

- share of:
 turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 35%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

The EU 1

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Enabling activities

make a substantial

contribution to an

environmental

objective.

directly enable other activities to

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 10%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 9%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable
investment means
an investment in an
economic activity
that contributes to
an environmental
or social objective,
provided that the
investment does
not significantly
harm any
environmental or
social objective and
that the investee

companies follow good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE US
MULTI-FACTOR EQUITY

Legal Entity Identifier : 213800R4HBLFN2D54E31

Environmental and/or social characteristics

Does this financial product have a sus	tainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 37.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the financial product's portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an

investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark S&P 500 (USD) NR is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark. The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by US companies, or companies operating in the USA.

The portfolio is built based on a systematic approach, combining several equity factor criterions such as value, profitability, low-volatility and momentum.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets.

The quantitative approach is implemented in order to consistently achieve the following targets:

- a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% of the least well-rated securities, and
- a portfolio's carbon footprint at least 50% lower than the carbon footprint of the index.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment
- More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
- The financial product shall invest at least 37% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

employee relations,

remuneration of staff and tax

practices include sound management

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum

commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 37%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2** Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of: - turnover reflecting the share of revenue from green activities of investee companies.

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not vet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

investments with an objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 4%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 12%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics

promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and

that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS SUSTAINABLE US VALUE MULTI-FACTOR EQUITY

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?		
Yes	No No	
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40.00% of sustainable investments	
in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy	
in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	
	x with a social objective	
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile and reduce its environmental footprint, as measured by greenhouse gas emissions, compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance

factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy
- The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The average carbon footprint of the portfolio compared to the average carbon footprint of its investment universe
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Principal adverse **impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark MSCI USA Value (USD) NR is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares undervalued as compared to the market on the purchase date, issued by US companies , and/or socially responsible companies operating in this country.

The portfolio is built based on a systematic approach, combining several equity factor criterions such as value, quality, low-volatility and momentum.

Once the quantitive investment is implemented, the portfolio is then rebalanced in order to maximise ESG scoring and to reduce its carbon footprint.

The investment team applies also BNP PARIBAS ASSET MANAGEMENT's sustainable Investment Policy, which takes into account Environmental, Social and Governance (ESG) criteria such as but not limited to reduction of emissions of greenhouse gas, respect of human rights, respect of minority shareholders rights, at each step of the investment process of the Fund.

The Fund follows the Enhanced ESG approach which means that the Fund implements more explicit ESG tilts (Invest in the most sustainable companies according to specific criteria and/or incorporating a wider range of exclusions) leading to more stringent ESG and/or Carbon performance targets.

The quantitative approach is implemented in order to consistently achieve the following targets:

- a portfolio's ESG score higher than the ESG score of the index after eliminating at least 20% of the least well-rated securities, and
- a portfolio's carbon footprint at least 50% lower than the carbon footprint of the index.

An extra-financial strategy may comprise methodological limitations such as the ESG Investment Risk as defined by the asset manager.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment
 - More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
 - The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe
 - The financial product shall invest at least 43% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum

Asset allocation describes the share of investments in specific assets.

Good governance practices include

structures,

sound management

employee relations,

remuneration of

staff and tax

compliance.

8

commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 40%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

- **#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
- **#2** Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B** Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Taxonomy-aligned activities are expressed as a share of:
- turnover reflecting

- the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹
 ?

1 -Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities?
Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 4%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

This fund has a minimum share of 4 % not aligned investments.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 9%.

What investments are included under '#2 Other', what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

environmental or social characteristics that they promote.

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Does this financial product have a sustainable investment objective? Yes No It will make a minimum of It promotes Environmental/Social (E/S) characteristics and while it does not have sustainable investments with as its objective a sustainable investment, it an environmental objective: will have a minimum proportion of 20% of sustainable investments in economic activities that with an environmental objective in qualify as environmentally sustainable under the EU economic activities that qualify as environmentally sustainable under the EU Taxonomy Taxonomy in economic activities that do with an environmental objective in not qualify as economic activities that do not qualify as environmentally sustainable environmentally sustainable under the under the EU Taxonomy EU Taxonomy with a social objective It will make a minimum of It promotes E/S characteristics, but will not make any sustainable investments sustainable investments with a social objective: ___%

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria, and by investing directly, or indirectly through funds, in bonds or shares of issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

When investing through passive funds and/or external funds, the investment manager relies on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The external fund analysis team within the investment manager is dedicated to select external funds using a proprietary methodology.

In addition to the usual selection criteria (quantitative analysis, qualitative analysis and risk due diligence), the team offers a ranking based on extra-financial (or ESG) criteria for each recommended manager or fund in each sector. The team applies a qualitative rather than

quantitative ESG rating to the funds and managers selected in order to assess the effective implementation of ESG practices and the inclusion of extra-financial criteria in their investment process.

The ESG rating system for the team is based on fundamental principles:

- Consistency of approach systematically applied across all asset classes and sectors to ensure consistency in rating
- A proprietary methodology applicable to all funds, with well-defined rules to limit any subjectivity
- An ESG rating for both the management company and the fund (the last including the ESG rating of its management company) The team also analyses a specific SRI (Socially Responsible Investment) selection based on complementary approaches (negative screening, best-in-class / best-effort, positive screening / impact investing)

As all external funds under selection, SRI funds must go through a selection process in three stages (quantitative analysis, qualitative analysis and risk due diligence). Therefore the ESG criteria applied to the investment process are assessed by examining in particular (non-exhaustive list):

- The extra-financial constraints applicable to the Fund's investment universe
- The use of quantitative and qualitative criteria and ESG research in the investment process
- Taking financial and extra-financial requirements into account in the construction of the portfolio
- Monitoring and compliance check with the constraints of socially responsible investment

When investing directly or through internal active funds, the investment manager relies on a proprietary ESG methodology and applies exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Policy (RBC Policy).

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;
- o Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- o Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

 The percentage of the direct investments and internal active funds compliant with the RBC Policy;

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's assets invested, through internal and/or external active and/or passive funds, in funds categorised as Article 8 and Article 9 under the SFDR regulation;
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to indirectly finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The Sustainable Investment minimum commitment of the financial product is calculated on an asset under management (AuM) weighted methodology without any minimum required for any underlying funds. As such, a look-through approach is applied in order to calculate the financial product's sustainable investment minimum proportion based on the data reported by the underlying funds.

Any sustainable investment commitment reported by external active and/or passive funds, selected by the dedicated internal team, are assessed thanks to specific methodologies developed by third-party asset managers and/or index providers.

Any sustainable investment commitment reported by direct investments or through internal active and/or passive funds are assessed thanks to the proprietary sustainable investment methodology as described below.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives;
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets;
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5° C;
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements

More information on the internal methodology can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective? Sustainable investments that the product partially intends to make through investments into

Sustainable investments that the product partially intends to make, through investments into direct lines or internal active funds, should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset manager and index providers assessment and reporting to perform the DNSH analysis in accordance with the regulatory requirements.

—— How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product, through investments into direct lines or internal active funds, takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

Exclusion of issuers that are in violation of international norms and conventions and issuers
that are involved in activities presenting an unacceptable risk to society and/or the
environment;

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

—— How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product, through investments into direct lines or internal active funds, is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

However, when investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for alignment of sustainable investments with the above-mentioned international norms and conventions.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes,

The product considers some principal adverse impacts on sustainability factors. When investing through external funds and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting for consideration of adverse impacts on sustainability factors.

On the other hand, all its investments into direct lines or internal active funds systematically implement the sustainable investment pillars defined in the GSS into the financial product's investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers
 that are involved in activities presenting an unacceptable risk to society and/or the
 environment;
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues;
- Ensuring all securities included in the portfolio have supportive ESG research.
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations.

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The Fund is actively managed without reference to an index. The Fund belongs to the category of funds of funds. It seeks to increase the value of its assets over the medium term by implementing a flexible and diversified allocation strategy on all types of asset classes, through funds or direct investments in all kind of transferable securities and/or in cash and also in financial derivative instruments. The targeted annual volatility is 7.5%.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall invest directly or through internal funds in compliance with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;
 - More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: <u>Sustainability documents BNPP AM Corporate English (bnpparibas-am.com)</u>;
 - The financial product shal invest, through internal and/or external active and/or passive funds, at least 75% of its assets funds categorised as Article 8 and Article 9 under the SFDR regulation;
 - The financial product shall invest at least 20% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

objectives and risk

investment

tolerance.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

When investing through direct lines or internal active funds, the investment manager relies on its internal proprietary assessment of good governance practices of the investee companies performed by the BNP Paribas Asset Management's Sustainability Centre as described below.

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics.

The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to include but are not limited to:

- Separation of power (e.g. Split CEO/Chair),
- Board diversity,
- Executive pay (remuneration policy),
- Board Independence, and key committees independence
- Accountability of directors,
- Financial expertise of the Audit Committee,
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower),
- Tax disclosure,
- An assessment of prior negative incidents relating to governance.

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

However, when investing through external funds and/or passive funds, selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers to assess good governance practices of the investee companies.

What is the asset allocation planned for this financial product?

When investing through direct lines or internal active and/or passive funds, the investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

However, when investing through external active and/or passive funds selected by the dedicated internal team, the investment manager relies on third-party asset managers and index providers assessment and reporting.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 42%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report.

The minimum proportion of sustainable investments of the financial product is 20%.

describes the share

of investments in

specific assets.

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management and/or hedging and/or investment purposes. These instruments are not used to attain the environmental or social characteristics promoted by the product.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
- What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 6%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in funds exposed to taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in funds exposed to sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 6%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- For direct lines or internal funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- For external funds, the proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the underlying fund, according to third-party asset managers and index providers reporting, or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable

Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: www.bnpparibas-am.com after choosing the relevant country and directly in the section "Sustainability-related disclosures" dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BNP PARIBAS FUNDS TURKEY EQUITY Legal Entity Identifier: 549300HW4YF2921JR655

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
Yes	No No
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in
not qualify as environmentally sustainable under the EU Taxonomy	economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	x It promotes E/S characteristics, but will not make any sustainable investments

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing

environmentally sustainable

economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

a list of

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The financial product does not intend to make any sustainable investment.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The financial product does not intend to make any sustainable investment.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Not applicable

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Not applicable

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives $\underline{\it Social}$
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark MSCI Turkey IMI 10/40 (NR) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by Turkish companies, or companies operating in this country.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus

strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 0%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 0%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the

Asset allocation describes the share of investments in

specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels

corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Not applicable

What is the minimum share of socially sustainable investments?

Not applicable

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS FUNDS US GROWTH Legal Entity Identifier : 549300QJ4LQOROSWXI10

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
Yes	No No
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 25.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system, establishing

environmentally sustainable

economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

a list of

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse **impacts** are the

most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery

matters.

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Russell 1000 Growth (RI) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in shares issued by US companies or companies operating in the USA, with greater-than-average potential for growth and/or relatively stable growth in profits.

Although the majority of the Fund equity securities may be components of the benchmark, the Investment Manager uses its wide discretion in relation to the benchmark to invest in companies and sectors not included in the benchmark in order to take advantage of specific investment opportunities. This results in a concentrated portfolio of approximately 50 stocks, weighted by conviction and diversified across sectors and issuers in order to reduce risks.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

Internal investment guidelines have been defined, including in reference to the benchmark, and are regularly monitored to ensure the investment strategy remains actively managed, while staying within pre-defined risk levels. Due to diversification and similar geographical/thematic constraints, investors should be aware that the Fund's risk and return profile may, from time to time, be comparable to the risk and return profile of the benchmark.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
 - The financial product shall invest at least 25% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 25%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Enabling activities directly enable

other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not vet available and among others have greenhouse gas emission levels corresponding to the best

performance.

Not applicable

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics

promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

investment means an investment in an

Sustainable

economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **BNP PARIBAS FUNDS US HIGH YIELD BOND** Legal Entity Identifier: JKRTIGHINW64V4XLQD61

Environmental and/or social characteristics

Does this financial product have a sus	etainable investment objective?
It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives ${\it Social}$
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark ICE BofAML US Non-Financial High Yield BB-B Constrained (USD) RI is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in high-yield, USD-denominated bonds or other debt instruments.

After hedging, the exposure to currencies other than USD may not exceed 5%.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 10% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 25%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 10%.

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

that the investee
companies follow

good governance practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

	Does this financial product have a sustainable investment objective?		
	Yes	x No	
	It will make a minimum of sustainable investments with an environmental objective:%	x It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30.00% of sustainable investments	
5	in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy	
L	in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	
		x with a social objective	
	It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments	

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse **impacts** are the

most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery

matters.

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives <u>Social</u>
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark Russell MidCap (RI) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark. The Fund seeks to increase the value of its assets over the medium term by investing in shares of US mid-sized companies, and/or mid-sized companies operating in this country.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents -Sustainability documents **BNPP** Corporate (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
 - The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by

The investment **strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

the ESG analysis based on the ESG internal proprietary methodology

- The financial product shall invest at least 30% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include sound management

employee relations,

remuneration of staff and tax

structures.

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 30%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the

improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards :

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B** Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a

- **turnover** reflecting the share of revenue from green activities of investee companies.

share of:

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

directly enable other activities to make a substantial contribution to an environmental objective.

Enabling activities

Transitional activities are activities for which low-carbon alternatives are not

yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?
 Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

indexes to measure

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means

an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

practices.

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

This Fund is actively managed. The benchmark ICE BofA 1-3 Years US Treasury (RI) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund seeks to increase the value of its assets over the medium term by investing in government and/or corporate bonds and other debt instruments, structured debt included denominated in USD with an average duration that does not exceed four years.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)

The investment strategy guides investment decisions based on factors such as investment

objectives and risk

tolerance.

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 10% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 10%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B** Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a

- **turnover** reflecting the share of revenue from green activities of investee companies.

share of:

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

that contributes to an environmental or social objective, provided that the

investment does

not significantly harm any

environmental or social objective and

that the investee

companies follow

good governance practices.

The EU Taxonomy is a classification

system, establishing

environmentally

economic activities.

For the time being,

it does not include a

a list of

sustainable

list of socially

sustainable economic activities.

Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance

Principal adverse **impacts** are the

most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery

matters.

practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies

- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

This Fund is actively managed. The benchmark Russell 2000 (RI) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark. The Fund seeks to increase the value of its assets over the medium term by investing in shares of US small companies, and/or small companies operating in the USA.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus

- The financial product shall have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product shall invest at least 24% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

• What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 48%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 24%.

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?

Not applicable

are sustainable investments with an environmental objective that **do not** take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 5%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 5%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

social

indexes to measure

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any

environmental or social objective and that the investee companies follow good governance practices.

Sustainable

The EU Taxonomy is a classification system, establishing a list of environmentally sustainable economic activities. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

Product name: BNP PARIBAS FUNDS USD MONEY MARKET

Legal Entity Identifier: 2138002RYJD3IVRUN140

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective? Yes No	
It will make a minimum of sustainable investments with an environmental objective:%	It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10.00% of sustainable investments
in economic activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
It will make a minimum of sustainable investments with a social objective:%	It promotes E/S characteristics, but will not make any sustainable investments

What environmental and/or social characteristics are promoted by this financial product?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

- 1. A company with an economic activity aligned with the EU Taxonomy objectives
- 2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets
- 3. A company operating in high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C
- 4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://www.bnpparibas-am.com/sustainability-documents/

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector
- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives Social
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:

https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The 'do no significant harm' principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Χ

Yes

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>

- 1. GreenHouse Gas (GHG) Emissions
- 2. Carbon footprint
- 3. GHG intensity of investee companies
- 4. Exposure to companies active in the fossil fuel sector
- 5. Share of non-renewable energy consumption and production
- 6. Energy consumption intensity per high impact climate sector

- 7. Activities negatively affecting biodiversity sensitive areas
- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

- 4. Investments in companies without carbon emission reduction initiatives *Social*
- 4. Lack of a supplier code of conduct
- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

This Fund is actively managed. The benchmark United States SOFR Secured Overnight Financing Rate (RI) is used for performance comparison only. The Fund is not benchmark constrained and its performance may deviate significantly from that of the benchmark.

The Fund belongs to the category of money market funds («MMF») as defined by Regulation (EU) 2017/1131 of the European Parliament and of the Council of 14 June 2017 on money market funds (the «Regulation»). It seeks to achieve the best possible return in USD in line with prevailing money market rates, over a 3-month period while aiming to preserve capital consistent with such rates and to maintain a high degree of liquidity and diversification, the 3-month period corresponds to the recommended investment horizon of the Fund.

The Fund is a standard variable net asset value MMF as defined by the Regulation.

It invests within the limits of the Regulation in a diversified portfolio of USD denominated money market instruments, deposits with credit institutions, repurchase agreements and reverse repurchase agreements, units or shares of short term MMF or other standard MMF, and ancillary liquid assets denominated in USD.

Financial derivative instruments (e.g. Interest Rate Swaps) are used only for the purpose of hedging the interest rate of the Fund. The impact of these financial derivative instruments will be taken into account for the calculation of the Weighted Average Maturity.

The Fund is not a guaranteed product. There is no currency exposure, other than to the USD.

Environmental, social and governance (ESG) criteria contribute to, but are not a determining factor in, the manager's decision making.

The elements of the investment strategy to attain the environmental or social characteristics promoted by this

financial product as described below are systematically integrated throughout the investment process.

- What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?
 - The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents Sustainability documents BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/)
 - The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
 - The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
 - The financial product shall invest at least 10% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The financial product does not commit to a minimum rate of reduction of the scope of investments prior to the application of its investment strategy.

What is the policy to assess good governance practices of the investee companies?

The ESG scoring framework assesses corporate governance through a core set of standard key performance indicators for all sectors supplemented by sector specific metrics. The governance metrics and indicators to assess good governance practices such as sound management structures, employee relations, remuneration of staff and tax compliance include but are not limited to:

- Separation of power (e.g. Split CEO/Chair)
- Board diversity
- Executive pay (remuneration policy)
- Board Independence, and key committees independence
- Accountability of directors
- Financial expertise of the Audit Committee
- Respect of shareholders rights and absence of antitakeover devices
- The presence of appropriate policies (i.e. Bribery and corruption, whistleblower)
- Tax disclosure
- An assessment of prior negative incidents relating to governance

The ESG analysis goes beyond the framework to look at a more qualitative assessment of how the insights from our ESG model are reflected in the culture and operations of investee companies. In some cases, the ESG analysts will conduct due diligence meetings to better understand the company's approach to corporate governance.

Good governance

practices include
sound management

employee relations,

remuneration of staff and tax

structures,

compliance.

What is the asset allocation planned for this financial product?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary

Asset allocation

describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

methodologies.

The minimum proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least 50%. For the avoidance of doubt, such a proportion is solely a minimum commitment and the real percentage of the investments of the financial product that attained the promoted environmental or social characteristics will be available in the annual report. The minimum proportion of sustainable investments of the financial product is 10%.

The remaining proportion of the investments may include:

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.

The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Financial derivative instruments may be used for efficient portfolio management, hedging and/or investment purposes, if applicable. These instruments are not used to attain the environmental or social

characteristics promoted by the product.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

What is the minimum share of investments in transitional and enabling activities?
 Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 1%.

The minimum share is intentionally low as the objective of the investment manager is not to prevent the product from investing in taxonomy-aligned activities within the framework of the investment strategy of the product.

The Management Company is improving its Taxonomy-alignment data collection to ensure the accuracy and suitability of its Taxonomy sustainability-related disclosures. In the meantime, the financial product will invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The minimum share of socially sustainable investments within the financial product is 1%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

Reference benchmarks are

whether the

attains the environmental or

social

indexes to measure

characteristics that

they promote.

financial product

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

• How does the designated index differ from a relevant broad market index?

Not applicable

• Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.bnpparibas-am.com/ after choosing the relevant country and directly in the section 'Sustainability-related disclosures' dedicated to the product.
