

- The fund seeks to increase the value of its assets over the medium term by investing primarily in companies engaging in the restoration and preservation of the world's ecosystems and natural capital.
- The fund has significant exposure to a single sector and is likely to be subject to a greater concentration risk and higher volatility than a more diversified investment.
- The fund has significant equity exposure. Risks of equity market may include significant fluctuations in prices, negative information about the issuer or market. Fluctuations are often amplified in the short term.
- The management company may at its discretion pay dividends out of the capital of the fund. Payment of dividends out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Any distributions involving payment of dividends out of the fund's capital may result in an immediate reduction of the net asset value per share.
- The monthly distribution share classes will continue to distribute monthly dividends in periods when the fund has negative return, which will further reduce the net asset value of the fund.
- Investors should not solely rely on this document to make any investment decision. Please refer to the Hong Kong offering document for further information (including the risk factors) about the fund.
