Launch date	SICAV 01 Jul 2021
Fund Manager	Solene Deharbonnier 25.30
Management Company	BNP PARIBAS ASSET MANAGEMENT Europe No capital guarantee
Capital protection	Stoxx Europe 600 Net Return (SXXR Index)
Comparative Index	EAA Fund Guaranteed Funds*
Morningstar Category	8
SFDR article	

Investment Objective

The THEAM Quant - Equity Europe Climate Care Protection 90% fund aims at providing a partial exposure to the performance of European equities with high ESG** standards and carefully selected on their carbon footprint and on the robustness of their energy transition strategy, while securing 90% of the highest NAV reached since the last business day of the previous calendar year with an annual reset of the protection level at the year change and distributing an annual coupon of 1% of the NAV recorded on the second last business day of the year

Investment strategy

-The Fund is partially exposed to the Equity Europe Climate Care Strategy which selects European companies on the basis of their carbon emissions but also on the robustness of their energy transition strategy.

-The Fund benefits from a 90% capital protection for the calendar year: any investment made in the Fund benefits from a 90% capital protection until the end of the calendar year (formal BNP Paribas guarantee). The protection level is reset at the year change.

-Each year the Fund distributes a 1% coupon calculated on the NAV recorded on the second last business day of the year.

Subscription tax	0.05%
Performance fees	None
Total fees (ongoing charges)	1.70%
Passporting	Italy

Fund management comment*

The market, sharply rising since the beginning of the year, continued on its trajectory in February. Despite a rise of 1.9 %, our strategy underperformed the Stoxx Europe 600 NR over this month, as well as since the beginning of the year (by -3.4 %). We can highlight the following elements on the strategy's underperformance:

- Within the Financials, the Healthcare and the Industrials sectors, our choice underperformed by resp. -2.4 %, -3.2 % and -2.3 % on the back of, for example, the poor performances of EXPERIAN (-6.1 %, weighted at 1.0 %) and of GETINGE (-2.3 %, with a weight of 1.1 %).

- Within Sweden, our equity selection underperformed that of the Stoxx Europe 600 NR (-6.8 %).

On the contrary, our selection within the Basic Materials sector outperformed that of the benchmark (+2.8 % versus +1.5 %), which was magnified by our stronger over allocation (+2.2 %).

The allocation analysis shows a rise of 0.6 % and 0.2 % for the Financials and the Consumer Non-Cyclicals sectors (weighted at 21.9 % and 6.9 % respectively). On the contrary, Technology and Cyclical Consumer Goods & Services fell by 0.4 % and 0.3 % (weighted at 10.3 % and 13.4 % respectively).

*Comment and performance data are related to the underlying strategy and not the fund itself, which has a variable exposure to the strategy.

RISK INDICATOR

Lower Risk				Higher Risk			
1	2	3	4	5	6	7	

The summary risk indicator is a guide to the level of risk of this Product compared to other Products. It shows how likely it is that the Product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this Product as 2 out of 7, which is a low risk class.

Be aware of currency risk. If the currency of your account is different from the currency of this Product, the payments you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Historical Monthly Performance (Share Protected C EUR ACC)

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Annual

Weight in Strategy

Risks

Risk of capital loss: Investments realised in funds are subject to market fluctuations and to inherent risks to investments in stocks. The value generated by these investments can be profits or losses and it is possible that investors do not recover the totality of their invested capital. The funds described in this documents display a risk of capital loss.

Equity risk: The fund is synthetically exposed to European equity markets. Unitholders are therefore exposed to declines in these equity markets.

Model risk: The model used to determine the asset allocation for each Strategy Index portfolio is based on a quantitative approach. There is a risk that the model will not be efficient as there is no guarantee that the indicators defined will be relevant in the future.

Counterparty Risk: This risk is associated with the ability of a counterparty in a financial transaction to fulfill its commitments like payment, delivery and reimbursement.

Risk related to the use of forward financial instruments: In order to achieve its investment objective, the Sub -Fund makes use of forward financial instruments traded over -the-counter that allow it to replicate the performance of the strategy. These instruments may involve a series of risks that could lead to adjustments or even the early termination of the instrument , which may affect the Sub-Fund's NAV.

Risks related to the protection mechanism: The protection mechanism implemented linked to the Guarantee involves that if the Net Asset Value per Share of each Class falls, the levels of protection will also be reduced accordingly. There is thus a risk that investors may lose almost all of their capital if they hold their Shares for a long period.

Risk of default of the Guarantor: Investors' attention is drawn to the fact that they are exposed to the risk of default of the Guarantor.

Risks related to the model used by the Strategy Index: The model used to determine the allocation of the Strategy Index is based on fundamental criteria designed to identify the stocks benefitting from good ESG performance according to Vigeo Eiris and allowing to maximize the energy transition criteria of the resulting basket of share. There is a risk that the model will not be efficient as there is no guarantee that the indicators defined will be relevant in the future. They are defined partly on the basis of historical data and there is nothing to guarantee that previous market situations will repeat themselves in the future.

Glossary

Guaranteed Funds - Guaranteed funds promise and/or guarantee the repayment of all or part of the capital invested or promise a pre-determined rate of return. Funds in this category do not receive a Morningstar Rating™.

Net Asset Value - Represents the net assets of the fund (ex-dividend) divided by the total number of shares issued by the fund.

Historical tracking error - Measure of the actual deviation of the fund's returns from the comparative benchmark index returns (annualised). A higher number means that the fund is taking greater risk against the benchmark.

Historical Volatility of Portfolio - Illustrates the dispersion of the fund's realized monthly returns around the average monthly return, indicating how volatile the fund's return is over time . The higher the number the more volatile the fund's returns.

UCITS V - "UCITS" or "undertakings for the collective investment in transferable securities" are investment funds regulated at European Union level. They account for around 75% of all collective investments by small investors in Europe. The legislative instrument covering these funds is Directive 2014/91/EU.

Ongoing Charges - The ongoing charges figure is based on the fund's expenses during the previous year . It excludes transaction costs and performance fees incurred by the fund.
